Part I The Essentials of Discrete Volume Computations

1	The Coin-Exchange Problem of Frobenius	3
1.1	Why Use Generating Functions?	3
1.2	Two Coins	5
1.3	Partial Fractions and a Surprising Formula	7
1.4	Sylvester's Result	11
1.5	Three and More Coins	13
	Notes	15
	Exercises	17
	Open Problems	23
2	A Gallery of Discrete Volumes	25
2.1	The Language of Polytopes	25
2.2	The Unit Cube	26
2.3	The Standard Simplex	29
2.4	The Bernoulli Polynomials as Lattice-Point Enumerators of Pyramids	31
2.5	The Lattice-Point Enumerators of the Cross-Polytopes	36
2.6	Pick's Theorem	38
2.7	Polygons with Rational Vertices	41
2.8	Euler's Generating Function for General Rational Polytopes ..	45
	Notes	48
	Exercises	50
	Open Problems	54
3	Counting Lattice Points in Polytopes: The Ehrhart Theory	57
3.1	Triangulations and Pointed Cones	57
3.2	Integer-Point Transforms for Rational Cones	60
3.3	Expanding and Counting Using Ehrhart's Original Approach ..	64
3.4	The Ehrhart Series of an Integral Polytope	67

3.5	From the Discrete to the Continuous Volume of a Polytope . . .	71
3.6	Interpolation	73
3.7	Rational Polytopes and Ehrhart Quasipolynomials	75
3.8	Reflections on the Coin-Exchange Problem and the Gallery of Chapter 2	76
	Notes	76
	Exercises	77
	Open Problems	82
4	Reciprocity	83
4.1	Generating Functions for Somewhat Irrational Cones	84
4.2	Stanley's Reciprocity Theorem for Rational Cones	86
4.3	Ehrhart–Macdonald Reciprocity for Rational Polytopes	87
4.4	The Ehrhart Series of Reflexive Polytopes	88
4.5	More “Reflections” on Chapters 1 and 2	90
	Notes	90
	Exercises	91
	Open Problems	93
5	Face Numbers and the Dehn–Sommerville Relations in Ehrhartian Terms	95
5.1	Face It!	95
5.2	Dehn–Sommerville Extended	97
5.3	Applications to the Coefficients of an Ehrhart Polynomial	98
5.4	Relative Volume	100
	Notes	102
	Exercises	103
	Open Problems	104
6	Magic Squares	105
6.1	It's a Kind of Magic	106
6.2	Semimagic Squares: Points in the Birkhoff–von Neumann Polytope	108
6.3	Magic Generating Functions and Constant-Term Identities	111
6.4	The Enumeration of Magic Squares	116
	Notes	117
	Exercises	119
	Open Problems	120

Part II Beyond the Basics

7	Finite Fourier Analysis	123
	7.1 A Motivating Example	123
	7.2 Finite Fourier Series for Periodic Functions on \mathbb{Z}	125
	7.3 The Finite Fourier Transform and Its Properties	129
	7.4 The Parseval Identity	131
	7.5 The Convolution of Finite Fourier Series	133
	Notes	135
	Exercises	135
8	Dedekind Sums	139
	8.1 Fourier–Dedekind Sums and the Coin-Exchange Problem Revisited	139
	8.2 The Dedekind Sum and Its Reciprocity and Computational Complexity	143
	8.3 Rademacher Reciprocity for the Fourier–Dedekind Sum	144
	8.4 The Mordell–Pommersheim Tetrahedron	147
	Notes	150
	Exercises	151
	Open Problems	153
9	The Decomposition of a Polytope into Its Cones	155
	9.1 The Identity “ $\sum_{m \in \mathbb{Z}} z^m = 0$ ” ... or “Much Ado About Nothing”	155
	9.2 Tangent Cones and Their Rational Generating Functions	159
	9.3 Brion’s Theorem	160
	9.4 Brion Implies Ehrhart	162
	Notes	163
	Exercises	164
10	Euler–Maclaurin Summation in \mathbb{R}^d	167
	10.1 Todd Operators and Bernoulli Numbers	167
	10.2 A Continuous Version of Brion’s Theorem	170
	10.3 Polytopes Have Their Moments	172
	10.4 From the Continuous to the Discrete Volume of a Polytope ...	174
	Notes	176
	Exercises	177
	Open Problems	178
11	Solid Angles	179
	11.1 A New Discrete Volume Using Solid Angles	179
	11.2 Solid-Angle Generating Functions and a Brion-Type Theorem .	182
	11.3 Solid-Angle Reciprocity and the Brianchon–Gram Relations ...	184

11.4 The Generating Function of Macdonald's Solid-Angle Polynomials	188
Notes	189
Exercises	189
Open Problems	190
12 A Discrete Version of Green's Theorem Using Elliptic Functions	191
12.1 The Residue Theorem	191
12.2 The Weierstraß \wp and ζ Functions	193
12.3 A Contour-Integral Extension of Pick's Theorem	195
Notes	196
Exercises	196
Open Problems	197
Appendix: Triangulations of Polytopes	199
Hints for ♣ Exercises	203
References	211
List of Symbols	221
Index	223
