FOREWORD ix

CHAPTER VII

BESSEL FUNCTIONS

FIRST PART: THEORY

7.1.	Introduction	1
7.2.	Bessel's differential equation	3
7.2.1.	Bessel functions of general order	3
7.2.2.	Modified Bessel functions of general order	5
7.2.3.	Kelvin's function and related functions	6
7.2.4.	Bessel functions of integer order	6
7.2.5.	Modified Bessel functions of integer order	9
7.2.6.	Spherical Bessel functions	9
7.2.7.	Products of Bessel functions	10
7.2.8.	Miscellaneous results	11
7.3.	Integral representations	13
7.3.1.	Bessel coefficients	13
7.3.2.	Integral representations of the Poisson type	14
7.3.3.	Representations by loop integrals	15
7.3.4.	Schläfli's, Gubler's, Sonine's and related integrals representations	17
7.3.5.	Sommerfeld's integrals	19
7.3.6.	Barnes' integrals	21
7.3.7.	Airy's integrals	22
7.4.	Asymptotic expansions	22
7.4.1.	Large variable	23
7.4.2.	Large order	24
7.4.3.	Transitional regions	28
7.4.4.	Uniform asymptotic expansions	30
7.5.	Related functions	31
7.5.1.	Neumann's and related polynomials	32
7.5.2.	Lommel's polynomials	34

7.5.3.	Anger-Weber functions	35
7.5.4.	Struves' functions	37
7.5.5.	Lommel's functions	40
7.5.6.	Some other notations and related functions	42
7.6.	Addition theorems	43
7.6.1.	Gegenbauer's addition theorem	43
7.6.2.	Graf's addition theorem	44
7.7.	Integral formulas	45
7.7.1.	Indefinite integrals	45
7.7.2.	Finite integrals	45
7.7.3.	Infinite integrals with exponential functions	48
7.7.4.	The discontinuous integral of Weber and Schafheitlin	51
7.7.5.	Sonine and Gegenbauer's integrals and generalizations	52
7.7.6.	Macdonald's and Nicholson's formulas	53
7.7.7.	Integrals with respect to order	54
7.8.	Relations between Bessel and Legendre functions	55
7.9.	Zeros of the Bessel functions	57
7.10.	Series and integral representations of arbitrary functions	63
7.10.1.	Neumann's series	63
7.10.2.	Kapteyn series	66
7.10.3.	Schlömilch series	68
7.10.4.	Fourier-Bessel and Dini series	70
7.10.5.	Integral representations of arbitrary functions	73

SECOND PART: FORMULAS

7.11.	Elementary relations and miscellaneous formulas	78
7.12.	Integral representations.	81
7.13.	Asymptotic expansions	85
7.13.1.	Large variable	85
7.13.2.	Large order	86
7.13.3.	Transitional regions	88
7.13.4.	Uniform asymptotic expansions	89
7.14.	Integral formulas	89
7.14.1.	Finite integrals	89
7.14.2.	Infinite integrals	91
7.15.	Series of Bessel functions	98
	References	106

CHAPTER VIII

FUNCTIONS OF THE PARABOLIC CYLINDER AND OF THE PARABOLOID OF REVOLUTION

8.1. Introduction 115

PARABOLIC CYLINDER FUNCTIONS

8.2. Definitions and elementary properties 116
8.3. Integral representations and integrals 119
8.4. Asymptotic expansions 122
8.5. Representation of functions in terms of the $D_\nu(x)$ . . . 123
8.5.1. Series 123
8.5.2. Representation by integrals with respect to the parameter 124
8.6. Zeros and descriptive properties 126

FUNCTIONS OF THE PARABOLOID OF REVOLUTION

8.7. The solutions of a particular confluent hypergeometric equation 126
8.8. Integrals and series involving functions of the paraboloid of revolution 128
References 131

CHAPTER IX

THE INCOMPLETE GAMMA FUNCTIONS AND RELATED FUNCTIONS

9.1. Introduction 133

THE INCOMPLETE GAMMA FUNCTIONS

9.2. Definitions and elementary properties 134
9.2.1. The case of integer a 136
9.3. Integral representations and integral formulas 137
9.4. Series 138
9.5. Asymptotic representations 140
9.6. Zeros and descriptive properties 141

SPECIAL INCOMPLETE GAMMA FUNCTIONS

9.7. The exponential and logarithmic integral 143

9.8. Sine and cosine integrals 145
9.9. The error functions 147
9.10. Fresnel integrals and generalizations 149
References 152

CHAPTER X

ORTHOGONAL POLYNOMIALS

10.1. Systems of orthogonal functions 153
10.2. The approximation problem 156
10.3. General properties of orthogonal polynomials 157
10.4. Mechanical quadrature 160
10.5. Continued fractions 162
10.6. The classical polynomials 163
10.7. General properties of the classical orthogonal polynomials 166
10.8. Jacobi polynomials 168
10.9. Gegenbauer polynomials 174
10.10. Legendre polynomials 178
10.11. Tchebichef polynomials 183
10.12. Laguerre polynomials 188
10.13. Hermite polynomials 192
10.14. Asymptotic behavior of Jacobi, Gegenbauer and Legendre polynomials 196
10.15. Asymptotic behavior of Laguerre and Hermite polynomials 199
10.16. Zeros of Jacobi and related polynomials 202
10.17. Zeros of Laguerre and Hermite polynomials 204
10.18. Inequalities for the classical polynomials 205
10.19. Expansion problems 209
10.20. Examples of expansions 212
10.22. Some classes of orthogonal polynomials 217
10.22. Orthogonal polynomials of a discrete variable . . . 221
10.23. Tchebichef's polynomials of a discrete variable and their generalizations 223
10.24. Krawtchouk's and related polynomials 224
10.25. Charlier's polynomials 226
References 228

CHAPTER XI

SPHERICAL AND HYPERSPHERICAL HARMONIC POLYNOMIALS

11.1. Preliminaries 232
11.1.1. Vectors 232
11.1.2. Gegenbauer polynomials 235
11.2. Harmonic polynomials 237
11.3 Surface harmonics 240
11.4. The addition theorem 242
11.5. The case $p = 1$, $h(n, p) = 2n + 1$ 248
11.5.1. A generating function for surface harmonics in the three-dimensional case 248
11.5.2. Maxwell's theory of poles 251
11.6. The case $p = 2$, $h(n, p) = (n + 1)^2$ 253
11.7. The transformation formula for spherical harmonics . 256
11.8. The polynomials of Hermite-Kampé de Fériet 259
References 262

CHAPTER XII

ORTHOGONAL POLYNOMIALS IN SEVERAL VARIABLES

12.1. Introduction 264
12.2. General properties of orthogonal polynomials in two variables 265
12.3. Further properties of orthogonal polynomials in two variables 268

ORTHOGONAL POLYNOMIALS IN THE TRIANGLE

12.4. Appell's polynomials 269

ORTHOGONAL POLYNOMIALS IN CIRCLE AND SPHERE

12.5. The polynomials V 273
12.6. The polynomials U 277
12.7. Expansion problems and further investigations . . . 280

HERMITE POLYNOMIALS OF SEVERAL VARIABLES

12.8. Definition of the Hermite polynomials 283

12.9. Basic properties of Hermite polynomials 289
12.10. Further investigations 289
References 292

CHAPTER XIII

ELLIPTIC FUNCTIONS AND INTEGRALS

13.1. Introduction 294

PART ONE: ELLIPTIC INTEGRALS

13.2. Elliptic integrals 295
13.3. Reduction of elliptic integrals 296
13.4. Periods and singularities of elliptic integrals . . . 302
13.5. Reduction of $G(x)$ to normal form 304
13.6. Evaluation of Legendre's elliptic integrals 308
13.7. Some further properties of Legendre's elliptic normal integrals 314
13.8. Complete elliptic integrals 317

PART TWO: ELLIPTIC FUNCTIONS

13.9. Inversion of elliptic integrals 322
13.10. Doubly-periodic functions 323
13.11. General properties of elliptic functions 325
13.12. Weierstrass' functions 328
13.13. Further properties of Weierstrass' functions 331
13.14. The expression of elliptic functions and elliptic integrals in terms of Weierstrass' functions 335
13.15. Descriptive properties and degenerate cases of Weierstrass' functions 338
13.16. Jacobian elliptic functions 340
13.17. Further properties of Jacobian elliptic functions . . 343
13.18. Descriptive properties and degenerate cases of Jacobi's elliptic functions 349
13.19. Theta functions 354
13.20. The expression of elliptic functions and elliptic integrals in terms of theta functions. The problem of inversion 360
13.21. The transformation theory of elliptic functions . . . 365

13.22. Transformations of the first order 367
13.23. Transformations of the second order 371
13.24. Elliptic modular functions 374
13.25. Conformal mappings 376
References 382
