

# Table of Contents

## 1. Tutorial

<i>F. Diener and M. Diener</i> .....	1
1.1 A new view of old sets .....	1
1.1.1 Standard and infinitesimal real numbers, and the Leibniz rules .....	2
1.1.2 To be or not to be standard .....	4
1.1.3 Internal statements (standard or not) and external statements .....	5
1.1.4 External sets .....	5
1.2 Using the extended language .....	7
1.2.1 The axioms .....	8
1.2.2 Application to standard objects .....	11
1.3 Shadows and S-properties .....	14
1.3.1 Shadow of a set .....	14
1.3.2 S-continuity at a point .....	15
1.3.3 Shadow of a function .....	15
1.3.4 S-differentiability .....	17
1.3.5 Notion of S-theorem .....	18
1.4 Permanence principles .....	18
1.4.1 The Cauchy principle .....	18
1.4.2 Fehrele principle .....	19

## 2. Complex analysis

<i>A. Fruchard</i> .....	23
2.1 Introduction .....	23
2.2 Tutorial .....	28
2.2.1 Proof of the Robinson-Callot theorem .....	28
2.2.2 Applications .....	30
2.2.3 Exercises with answers .....	31
2.2.4 Periodic functions .....	31
2.3 Complex iteration .....	34
2.4 Airy's equation .....	42
2.4.1 The distinguished solutions .....	46
2.5 Answers to exercises .....	50

<b>3. The Vibrating String</b>	
<i>Pierre Delfini and Claude Lobry</i> .....	51
3.1 Introduction .....	51
3.2 Fourier analysis of (DEN) .....	53
3.2.1 Diagonalisation of $A$ .....	53
3.2.2 Interpretation of $N$ $i$ -large .....	54
3.2.3 Resolution of (DEN) .....	57
3.3 An interesting example .....	58
3.4 Solutions of limited energy .....	63
3.4.1 A preliminary theorem .....	63
3.4.2 Limited energy: $S$ -continuity of solution .....	65
3.4.3 Limited energy: propagation and reflexion .....	67
3.4.4 A particular case: comparison with classical model .....	69
3.5 Conclusion .....	70
<b>4. Random walks and stochastic differential equations</b>	
<i>Eric Benoît</i> .....	71
4.1 Introduction .....	71
4.2 The Wiener walk with infinitesimal steps .....	71
4.2.1 The law of $w_t$ for a fixed $t$ .....	72
4.2.2 Law of $w$ .....	74
4.3 Equivalent processes .....	77
4.3.1 The notion .....	77
4.3.2 Macroscopic properties .....	79
4.3.3 The brownian process .....	79
4.4 Diffusions. Stochastic differential equations .....	81
4.4.1 Definitions .....	81
4.4.2 Theorems .....	82
4.4.3 Change of variable .....	83
4.5 Probability law of a diffusion .....	83
4.6 Ito's calculus – Girsanov's theorem .....	85
4.7 The “density” of a diffusion .....	87
4.8 Conclusion .....	89
<b>5. Infinitesimal algebra and geometry</b>	
<i>Michel Goze</i> .....	91
5.1 A natural algebraic calculus .....	91
5.1.1 The Leibniz rules .....	91
5.1.2 The algebraic-geometric calculus underlying a point of the plane .....	91
5.2 A decomposition theorem for a limited point .....	92
5.2.1 The decomposition theorem .....	93
5.2.2 Geometrical approach .....	95
5.2.3 Algebraic approach .....	96
5.3 Infinitesimal riemannian geometry .....	97

5.3.1	Orthonormal decomposition of a point .....	97
5.3.2	The Serret-Frenet frame of a differentiable curve in $\mathbb{R}^3$ .....	97
5.3.3	The curvature and the torsion .....	98
5.4	The theory of moving frames .....	100
5.4.1	The theory of moving frames .....	100
5.4.2	The moving frame: an infinitesimal approach .....	102
5.4.3	The Serret-Frenet fibre bundle .....	104
5.5	Infinitesimal linear algebra .....	104
5.5.1	Nonstandard vector spaces .....	104
5.5.2	Perturbation of linear operators .....	105
5.5.3	The Jordan reduction of a complex linear operator ...	107
<b>6.</b>	<b>General topology</b>	
	<i>Tewfik Sari</i> .....	109
6.1	Halos in topological spaces .....	109
6.1.1	Topological proximity .....	109
6.1.2	The halo of a point .....	110
6.1.3	The shadow of a subset .....	111
6.1.4	The halo of a subset .....	112
6.2	What purpose do halos serve ? .....	113
6.2.1	Comparison of topologies .....	114
6.2.2	Continuity .....	114
6.2.3	Neighbourhoods, open sets and closed sets .....	114
6.2.4	Separation and compactness .....	115
6.3	The external definition of a topology .....	116
6.3.1	Halic preorders and $\mathcal{P}$ -halos .....	117
6.3.2	The ball of centre $x$ and radius $\alpha$ .....	119
6.3.3	Product spaces and function spaces .....	121
6.4	The power set of a topological space .....	123
6.4.1	The Vietoris topology .....	123
6.4.2	The Choquet topology .....	124
6.5	Set-valued mappings and limits of sets .....	125
6.5.1	Semicontinuous set-valued mappings .....	125
6.5.2	The topologization of semi-continuities .....	126
6.5.3	Limits of Sets .....	127
6.5.4	The topologization of the notion of the limit of sets ...	129
6.6	Uniform spaces .....	130
6.6.1	Uniform proximity .....	131
6.6.2	Limited, accessible and nearstandard points .....	132
6.6.3	The external definition of a uniformity .....	133
6.7	Answers to the exercises .....	134

<b>7. Neutrices, external numbers, and external calculus</b>	
<i>Fouad Koudjeti and Imme van den Berg</i> .....	145
7.1 Introduction .....	145
7.2 Conventions; an example .....	146
7.3 Neutrices and external numbers .....	149
7.4 Basic algebraic properties .....	150
7.4.1 Elementary operations .....	151
7.4.2 On the shape of a neutrix .....	153
7.4.3 On the product of neutrices .....	156
7.5 Basic analytic properties .....	158
7.5.1 External distance and extrema of a collection of external numbers .....	159
7.5.2 External integration .....	162
7.5.3 External functions .....	165
7.6 Stirling's formula .....	168
7.7 Conclusion .....	169
<b>8. An external probability order theorem with applications</b>	
<i>I.P. van den Berg</i> .....	171
8.1 Introduction .....	171
8.2 External probabilities .....	173
8.2.1 Possible values .....	174
8.2.2 Externally measurable sets .....	174
8.2.3 Monotony .....	175
8.2.4 Additivity .....	175
8.2.5 Almost certain and negligible .....	176
8.3 External probability order theorems .....	176
8.4 Weierstrass, Stirling, De Moivre–Laplace .....	178
8.4.1 The Weierstrass theorem .....	178
8.4.2 Stirling's formula revisited .....	180
8.4.3 A central limit theorem .....	180
<b>9. Integration over finite sets</b>	
<i>Pierre Cartier and Yvette Perrin</i> .....	185
9.1 Introduction .....	185
9.2 S-integration .....	186
9.2.1 Measure on a finite set .....	186
9.2.2 Rare sets .....	186
9.2.3 S-integrable functions .....	187
9.3 Convergence in $SL^1(F)$ .....	189
9.3.1 Strong convergence .....	189
9.3.2 Convergence almost everywhere .....	190
9.3.3 Averaging .....	191
9.3.4 Martingales relative to a function .....	192
9.3.5 Commentary .....	194

9.3.6	Definitions	195
9.3.7	Quadrable sets	196
9.3.8	Partitions in quadrable subsets	197
9.3.9	Lebesgue integrable functions	199
9.3.10	Average of L-integrable functions	200
9.3.11	Decomposition of S-integrable functions	202
9.3.12	Commentary	203
9.4	Conclusion	204
<b>10.</b>	<b>Ducks and rivers: three existence results</b>	
	<i>Francine Diener and Marc Diener</i>	205
10.1	The ducks of the Van der Pol equation	205
10.1.1	Definition and existence	205
10.1.2	Application to the Van der Pol equation	208
10.1.3	Duck cycles: the missing link	211
10.2	Slow-fast vector fields	212
10.2.1	The fast dynamic	212
10.2.2	Application of the fast dynamic	213
10.2.3	The slow dynamic	214
10.2.4	Application of the slow dynamic	215
10.3	Robust ducks	216
10.3.1	Robust ducks, buffer points, and hills-and-dales	217
10.3.2	An other approach to the hills-and-dales method	219
10.4	Rivers	220
10.4.1	The rivers of the Liouville equation	220
10.4.2	Existence of an attracting river	223
10.4.3	Existence of a repelling river	223
<b>11.</b>	<b>Teaching with infinitesimals</b>	
	<i>André Deledicq</i>	225
11.1	Meaning rediscovered	226
11.1.1	Continuity having continuity troubles	226
11.1.2	The “wooden language” of limits	227
11.1.3	A second marriage between intuition and formalism	227
11.2	the evidence of orders of magnitude	228
11.2.1	Minimal rules and the vocabulary of calculus	228
11.2.2	Colour numbers	229
11.2.3	The algebraic game of <i>huge</i>	230
11.3	Completeness and the shadows concept	234
11.3.1	The geometrical game of <i>almost</i>	234
11.3.2	Examples	235
11.3.3	Brave new numbers	238
