

CONTENTS

Preface	vii
CHAPTER 1. INTRODUCTION	1
1.1. Terminology	1
1.2. Jensen's, Carleman's, and Nevanlinna's formulas	2
1.3. Carathéodory's inequality	2
1.4. Phragmén-Lindelöf theorems	3
1.5. Density of sequences and sets	5
1.6. Stirling's formula	6
1.7. Mittag-Leffler summability	6
1.8. Laplace and Fourier transforms	7
CHAPTER 2. GENERAL PROPERTIES OF ENTIRE FUNCTIONS OF FINITE ORDER	8
2.1. Measures of rate of growth	8
2.2. Order and type in terms of the coefficients	9
2.3. Other connections between growth and coefficients	12
2.4. The order and type of a derivative	13
2.5. Rate of growth and distribution of zeros	14
2.6. Lemmas on infinite products	18
2.7. Hadamard's factorization theorem	22
2.8. Laguerre's theorem on separation of zeros	23
2.9. The zeros of functions of nonintegral order	24
2.10. The zeros of functions of integral order	27
2.11. Further relations between growth and zeros	32
2.12. Functions of genus 0	34
CHAPTER 3. THE MINIMUM MODULUS	39
3.1. Functions of order less than $\frac{1}{2}$	39
3.2. Functions of order less than 1	40
3.3. Functions of order 1	43
3.4. The minimum modulus of a polynomial	46
3.5. Lemmas on functions of small order	47
3.6. Functions of order zero	50
3.7. Functions of larger order	51
CHAPTER 4. FUNCTIONS WITH REAL NEGATIVE ZEROS	55
4.1. Direct theorems	55
4.2. Converse theorems	56
4.3. Generalizations	59
4.4. Another kind of theorem	60
CHAPTER 5. GENERAL PROPERTIES OF FUNCTIONS OF EXPONENTIAL TYPE	66
5.1. Properties of the indicator	66
5.2. Convex sets	70
5.3. The indicator diagram	73
5.4. Properties of the indicator diagram	75
5.5. The Borel transform on the boundary of the conjugate indicator diagram	77
5.6. Functions of exponential type in an angle	78

CHAPTER 6. FUNCTIONS OF EXPONENTIAL TYPE, RESTRICTED ON A LINE. I.	
THEOREMS IN THE LARGE	82
6.1. Introduction	82
6.2. Functions bounded on a line	82
6.3. Relations among integrals, mean values, and distribution of zeros	85
6.4. Generalizations of boundedness	89
6.5. Representation of functions in a half plane	91
6.6. Consequences of the representation theorem	95
6.7. Integrability on a line	97
6.8. Representations for functions which are bounded on a line ..	103
6.9. The indicator diagram of a finite Fourier transform	108
6.10. Periodic and almost periodic functions	109
CHAPTER 7. FUNCTIONS OF EXPONENTIAL TYPE, RESTRICTED ON A LINE. II.	
ASYMPTOTIC BEHAVIOR IN A HALF PLANE	113
7.1. Introduction	113
7.2. The asymptotic behavior of a Blaschke product	114
7.3. Asymptotic behavior with other boundary conditions	121
7.4. The limit of $r^{-1} \log M(r)$	123
7.5. Factorization of a positive function	124
7.6. The type of a product	126
7.7. A symmetry property of the indicator diagram	128
7.8. Functions with a zero-free half plane	129
CHAPTER 8. FUNCTIONS OF EXPONENTIAL TYPE: CONNECTIONS BETWEEN	
GROWTH AND DISTRIBUTION OF ZEROS	133
8.1. Introduction	133
8.2. Entire functions with real zeros	136
8.3. Entire functions with real zeros, continued	138
8.4. Entire functions with zeros close to the real axis	143
CHAPTER 9. UNIQUENESS THEOREMS	152
9.1. Introduction	152
9.2. Zeros at the positive integers	153
9.3. Applications of Carleman's theorem	154
9.4. Zeros at the positive and negative integers	156
9.5. General distribution of zeros on a half line	157
9.6. Zeros near the integers	161
9.7. Zeros less regularly distributed	164
9.8. Functions with a sequence of small values	165
9.9. Alternation theorems	168
9.10. Uniqueness theorems with operators	169
9.11. Generalized Abel series	172
9.12. Integral-valued entire functions	175
CHAPTER 10. GROWTH THEOREMS	178
10.1. Exponential growth on an arithmetic progression	178
10.2. Boundedness on an arithmetic progression	180
10.3. Exponential growth on a sequence having a density	185
10.4. An application	190
10.5. Boundedness on a sequence which is close to an arithmetic progression	191
10.6. Applications to L^p and l^p problems	196
10.7. Generalizations	199

CHAPTER 11. OPERATORS AND THEIR EXTREMAL PROPERTIES.....	206
11.1. Introduction.....	206
11.2. A general method.....	207
11.3. Bounds for derivatives.....	210
11.4. Inequalities involving the maximum of $ f(x) $	213
11.5. Inequalities involving $\sup f(n\pi/\tau) $	218
11.6. Extension of operators.....	222
11.7. A class of operators.....	225
CHAPTER 12. APPLICATIONS.....	233
12.1. Introduction.....	233
12.2. Asymptotic behavior of a mean value.....	233
12.3. A theorem on convolutions.....	234
12.4. Completeness of sets of functions.....	234
12.5. Fourier series.....	237
12.6. Power series on the circle of convergence.....	239
12.7. Dirichlet series.....	243
12.8. Gap theorems for entire functions.....	244
12.9. Expansions of analytic functions in series of polynomials.....	245
12.10. Differential equations of infinite order.....	247
12.11. Approximation by entire functions.....	248
Bibliography.....	252
Index.....	269
Index of Notations.....	276
