

## CONTENTS

INTRODUCTION. EARLY HISTORY AND BIBLIOGRAPHY.....	1
CHAPTER I. GEOMETRIC AND FUNCTION-THEORETIC FOUNDATIONS.....	10
A. <u>Projective space and unitary metric</u> .....	10
§1. Plücker coordinates and the calculus of forms.....	10
§2. Duality.....	15
§3. Unitary geometry.....	19
§4. Projection.....	26
§5. Distortion.....	30
B. <u>Generalities concerning analytic curves</u> .....	35
§6. Analytic branch. Associated curves.....	35
§7. Stationarity indices.....	41
§8. Dual curve.....	47
§9. Rational curves.....	51
§10. Analytic and algebraic curves.....	56
§11. Meromorphic curves.....	65
CHAPTER II. FIRST MAIN THEOREM FOR MEROMORPHIC CURVES.....	69
§1. The condenser formula.....	69
§2. The first main theorem.....	74
§3. Meromorphic functions. The exponential function.....	82
§4. A fundamental lemma.....	87
§5. Exponential curves.....	94
§6. Kronecker multiplication. Intersections with an algebraic surface.....	106
§7. Projection.....	109
§8. Poincaré's theorem for meromorphic functions..	112
§9. Hadamard's second theorem for meromorphic functions.....	117

CHAPTER III. THE SECOND MAIN THEOREM FOR MEROMORPHIC CURVES.....	123
§1. The formula of the second main theorem.....	123
§2. Average of the defect.....	125
§3. On integration in general.....	130
§4. Average of the N-term.....	138
§5. The order of rank p.....	143
§6. The compensating term for the stationary points.....	150
§7. Inequalities for orders and stationarity valences of all ranks.....	157
§8. A peculiar relation.....	160
CHAPTER IV. FIRST AND SECOND MAIN THEOREMS FOR ANALYTIC CURVES.....	163
§1. Green's formula.....	163
§2. The condenser formula.....	168
§3. The first main theorem and the valence integral for T.....	172
§4. Existence of the condenser potential and relaxation of conditions for boundary.....	177
§5. Second main theorem.....	184
§6. Positive and zero capacity. The "little" terms $m^0$ and $\Omega^0$ .....	189
§7. The fundamental inequality.....	195
§8. Special cases of rotational symmetry.....	203
§9. Appendix. The banks of a Jordan contour.....	205
CHAPTER V. THE DEFECT RELATIONS.....	211
§1. Picard's theorem.....	211
§2. Weighted averages. The basic general formula.....	213
§3. Defect relation for meromorphic functions on a Riemann surface.....	216
§4. Convergence of an integral.....	223
§5. Starting the investigation for arbitrary n....	224
§6. Consequences for arbitrary rank.....	231
§7. Sum into product.....	237

## CHAPTER V. (Continued)

- §8. The  $\Omega$ -m-relation for points.....241
- §9. Discussion of the defect relations for  
points.....247
- §10. Incidences of higher order. Formulation  
of the general defect relation.....253
- §11. Proof of the general defect relation.....259
- §12. Computation of coefficients. The  
fundamental relation for the actual defects..264

(4.12) refers to the formula labeled (4.12) in §4 of the same Chapter.

(II, 4.12) refers to formula (4.12) of Chapter II.
