

# CONTENTS

Chapter 1. Some basic results . . . . .	9
1.1. Univalent functions . . . . .	9
1.2. The classical distortion theorems . . . . .	17
1.3. The Bieberbach conjecture . . . . .	24
1.4. Sequences of univalent functions . . . . .	27
1.5. Appendix: The Jordan curve theorem . . . . .	31
Chapter 2. Some special classes . . . . .	35
2.1. Subordination and functions of positive real part . . . . .	35
2.2. Starlike and convex functions . . . . .	42
2.3. Close-to-convex functions . . . . .	51
Chapter 3. The Grunsky inequality . . . . .	56
3.1. The Grunsky inequality . . . . .	56
3.2. The Golusin inequality . . . . .	64
3.3. Some sharp coefficient estimates . . . . .	68
3.4. Large coefficients: The FitzGerald inequality . . . . .	72
3.5. Large coefficients: The Milin method . . . . .	78
3.6. Appendix: Complex matrices . . . . .	88
Chapter 4. Generalizations of the Grunsky inequality . . . . .	91
4.1. Disjoint univalent functions . . . . .	91
4.2. Bounded functions and Bieberbach–Eilenberg functions . . . . .	98
4.3. The Garabedian–Schiffer inequality . . . . .	103
4.4. Applications of the Garabedian–Schiffer inequality . . . . .	117
Chapter 5. Growth problems . . . . .	125
5.1. Estimates for integrals . . . . .	125
5.2. The growth of the coefficients . . . . .	130
5.3. The distribution of growth . . . . .	138
5.4. Lacunary series . . . . .	148
Chapter 6. Univalent functions and differential equations . . . . .	156
6.1. The Loewner differential equation . . . . .	156
6.2. Applications to estimates . . . . .	164
6.3. Applications to univalence criteria . . . . .	171
6.4. Second order linear differential equations . . . . .	176
Chapter 7. Extremal problems and variations . . . . .	180
7.1. Extremal problems and extreme points . . . . .	180
7.2. Variations . . . . .	183

7.3.	The Schiffer differential equation . . . . .	190
7.4.	Other classes of univalent functions . . . . .	197
<b>Chapter 8. Quadratic differentials (by G. Jensen) . . . . .</b>		<b>205</b>
8.1.	Introduction . . . . .	205
8.2.	Elementary properties of quadratic differentials . . . . .	208
8.3.	The global structure of trajectories . . . . .	217
8.4.	Admissible sets and functions . . . . .	227
8.5.	Estimates for area distortion . . . . .	233
8.6.	The General Coefficient Theorem . . . . .	243
8.7.	Applications to extremal problems . . . . .	251
<b>Chapter 9: Boundary behaviour . . . . .</b>		<b>261</b>
9.1.	Normal functions . . . . .	261
9.2.	Prime ends and limits . . . . .	271
9.3.	Local connectivity and Jordan domains . . . . .	278
9.4.	Quasiconformal curves . . . . .	286
<b>Chapter 10: The boundary behaviour of the derivative . . . . .</b>		<b>295</b>
10.1.	Smooth boundary curves . . . . .	295
10.2.	The angular derivative . . . . .	302
10.3.	The distortion of length . . . . .	311
10.4.	Linear measure and univalent functions . . . . .	318
10.5.	Plessner's theorem and the angular derivative . . . . .	323
<b>Chapter 11: Capacity . . . . .</b>		<b>331</b>
11.1.	Properties of capacity . . . . .	331
11.2.	Boundary behaviour and capacity . . . . .	341
<b>References . . . . .</b>		<b>353</b>
<b>List of symbols . . . . .</b>		<b>372</b>
<b>Index . . . . .</b>		<b>374</b>
