

TABLE OF CONTENTS

CHAPTER	PAGE
I. HISTORY OF SCHLICHT FUNCTIONS AND ELEMENTARY PROPERTIES OF THE n TH REGION.....	1
1.1. Brief history of the theory of schlicht functions.....	1
1.2. Definition of the n th coefficient region. Description of the 3rd region.....	5
1.3. Definition of a general class of extremal problems for schlicht functions.....	8
1.4. Elementary properties of the n th coefficient region. Characterization of interior points. Topological equivalence of the n th region and the closed $(2n - 2)$ -dimensional full sphere.....	9
II. VARIATIONS OF SCHLICHT FUNCTIONS.....	14
2.1. Formation of Riemann surfaces of genus zero by the identification of arcs on the circumference of the unit circle. Proof of a particular case of the uniformization principle.....	14
2.2. The domain obtained from the plane by identifying the edges of two Jordan arcs with common end-points, one Jordan arc lying in an ϵ -neighborhood of the other. Construction of the first variation of the mapping function. Construction of the variation when the domain is obtained from the unit circle instead of the plane. Variation of a schlicht function of class \mathfrak{S}	23
2.3. Application of the variational formula to obtain a differential equation satisfied by a function belonging to a boundary point of V_n where a certain function of the first n coefficients is maximal.....	36
2.4. Differential equation satisfied by a function belonging to any boundary point of V_n	40
2.5. The n th coefficient region for functions which are schlicht and bounded by unity.....	41
2.6. Interior variations.....	43
III. THE CRITICAL POINTS OF THE DIFFERENTIAL EQUATION.....	44
3.1. Hyperelliptic trajectories, or loci in the plane on which the real part of a hyperelliptic integral is constant.....	44
3.2. Local behavior of the loci near zeros and simple poles of the integrand lying in the finite part of the plane. Behavior near a double pole. Behavior near a pole of order higher than the second.....	46
3.3. Local behavior of the loci near the point at infinity.....	55
IV. THE Γ -STRUCTURE. BEHAVIOR IN THE LARGE.....	56
4.1. Definition and classification of the critical points of the loci. Proof that a domain bounded by finitely many arcs on which the real part of the hyperelliptic integral is constant and by one arc on which the imaginary part is constant must contain a critical point of negative order.....	56
4.2. Investigation of the behavior of the loci defined by $P(w)$, $Q(z)$, and $\Phi(v)$ when prolonged from a point of the plane.....	60
4.3. Definition of the Γ -structures Γ_w , Γ_z , and Γ_v . The connectivity of Γ_w and Γ_z	65
4.4. Dissection of the plane by Γ_w and Γ_z into end domains and strip domains. The structure of Γ_w and Γ_z in the large.....	67
4.5. Dissection of the plane by Γ_v . The structure of Γ_v in the large.....	70
V. GEODESICS. CONTINUITY THEOREM.....	75
5.1. The metrics defined by $P(w)$, $Q(z)$, and $\Phi(v)$. Admissible paths.....	75

5.2.	Proof that any two points of the plane different from the origin are joined by a unique geodesic in the metric defined by $P(w)$	76
5.3.	The existence of extended domains in which the mapping defined by the integral is schlicht.....	80
5.4.	Investigation of the dependence of the Γ -structures on the coefficients of the functions defining them. Continuity theorem.....	81
VI.	FUNCTIONS WHICH ARE REGULAR IN $ z < 1$ AND SATISFY THE DIFFERENTIAL EQUATION.....	88
6.1.	Definition of \mathcal{D}_n -equations and \mathcal{D}_n -functions.....	88
6.2.	Proof that a \mathcal{D}_n -function is schlicht.....	93
VII.	THE LENGTH-AREA PRINCIPLE. TEICHMÜLLER'S METHOD.....	93
7.1.	The length-area principle.....	93
7.2.	Teichmüller's method.....	93
7.3.	Proof that there is a one-one correspondence between \mathcal{D}_n -functions and boundary points of the n th coefficient region.....	103
VIII.	RELATIONS BETWEEN $P(w)$ AND $Q(z)$	106
8.1.	The coefficients of a \mathcal{D}_n -equation.....	106
8.2.	Solutions of a \mathcal{D}_n -equation which are regular in a neighborhood of the origin.....	106
8.3.	Formal relations between the four vectors \mathfrak{A} , \mathfrak{B} , \mathfrak{F} , and \mathfrak{a}	110
8.4.	Proof that there is a $Q(z)$ corresponding to any given $P(w)$	111
8.5.	Formation of a closed Riemann surface of genus zero by identifying pairs of arcs on the circumference of the unit circle, the identification being in the metric defined by $Q(z)$. The local uniformizers of the Riemann surface.....	112
8.6.	Existence of a function F mapping the closed Riemann surface onto the closed plane.....	117
8.7.	Definition of the function $\sigma(z)$ at points of $ z = 1$. Local behavior of the mapping function F at points of $ z = 1$	118
8.8.	Definitions of the distinguished cycle Σ , of a canonical identification of arcs on $ z = 1$, and of the space S_n . Proof that to each point of S_n there belongs a unique \mathcal{D}_n -function.....	119
8.9.	Step-wise realization of the identification on $ z = 1$. Existence of a function $v(z)$ which identifies a pair of abutting arcs on the unit circumference. Continuous realization of the identification. A differential equation satisfied by the function $v(z, u)$. The limit of $v(z, u)/u$ as u tends to zero.....	123
IX.	LÖWNER CURVES.....	130
9.1.	The Löwner curve defined by the continuous realization of the identification and the Löwner differential equation for $v(z, u)$	130
9.2.	The Löwner representation for the coefficients of the function $v(z, u)$. The differential equation for $Q(z, u)$. Definition of the coefficients $C_k(u)$ and the differential equations for the $C_k(u)$. The system of differential equations for the roots of $Q(z, u)$	134
9.3.	The Löwner curves lying on the boundary of V_n . Definition of the function $f(z, u)$. The limit of $f(z, u)$ as u tends to zero. The differential equations for the function $h(z, u', u'')$. Historical remarks.....	139
X.	LINEAR FORMS AND THE SUPPORTING SURFACE.....	143
10.1.	Definition of the supporting surface K_n	143
10.2.	Proof that a function belonging to a point of K_n maps the interior of the unit circle onto the plane minus a set of arcs without finite critical points.....	144

10.3.	Proof that the supporting surface K_n is connected and contains the curve $(2e^{i\theta}, 3e^{2i\theta}, \dots, ne^{(n-1)i\theta})$. Proof that a function belonging to a point of K_n maps the interior of the unit circle onto the plane minus a single analytic slit. Proof that the convex hull of the Koebe curve $(2e^{i\theta}, 3e^{2i\theta}, \dots, ne^{(n-1)i\theta})$ does not contain the set V_n in case $n > 2$..	147
10.4.	Functions $f(z)$ satisfying more than one \mathcal{D}_n -equation. Example of an algebraic function $f(z)$ satisfying two \mathcal{D}_n -equations which maps $ z < 1$ onto the complement of a single analytic arc without finite critical points. Examples of functions satisfying several \mathcal{D}_n -equations which map $ z < 1$ onto the plane slit along straight lines. Proof that if $f(z)$ satisfies a \mathcal{D}_n -equation where $n - 1$ is a prime, then it satisfies no other \mathcal{D}_n -equation unless it is a rational function of simple type....	153
XI.	THE PORTION OF THE BOUNDARY OF V_n CORRESPONDING TO SINGLE ANALYTIC SLITS.....	159
11.1.	Definition of the boundary set L_n . Differential equations of the Löwner curves belonging to L_n	159
11.2.	Proof by the method of successive approximation that there are curves lying on the boundary of V_n which begin at points of the Koebe curve and sweep over all of L_n	160
11.3.	Proof that points on the boundary of V_n defined by functions $Q(z)$ having only one zero on $ z = 1$ which is of precise order 2 depend analytically on the roots of $Q(z)$	165
11.4.	Definition of the boundary set M_n . Proof that M_n is not empty, that it is open, and that its closure contains the supporting surface K_n . The one-one correspondence between points of M_n and a class of Q -functions.....	172
11.5.	Proof of the variational formula for all functions belonging to a neighborhood of a point of M_n	182
XII.	PARAMETRIZATION OF THE BOUNDARY OF V_n	192
12.1.	Definition of the tree or linear graph defined by a point of the space S_n	192
12.2.	The b -sequence of a tree. Formula for the number of topologically different trees having the same number of terminal tips.....	194
12.3.	Trees having branch lengths in the metric defined by $Q(z)$. The β -sequence of a tree.....	199
12.4.	The λ -sequence.....	201
12.5.	The parameters which define a tree.....	203
12.6.	The number of independent parameters.....	206
12.7.	The dissection of the space S_n into portions whose points depend on a set of real parameters.....	206
XIII.	THE REGION V_3	208
13.1.	Summary of results to be proved including parametric formulas for the boundary of V_3 . Discussion of the tables given in the Appendix.....	208
13.2.	Integration of the differential equation in special cases. Integration of the right and left sides of the differential equation in the general case.....	211
13.3.	Determination of the Γ -structure.....	215
13.4.	The parametric formulas for the portion of the boundary corresponding to functions which map the interior of the unit circle onto the plane minus a forked slit.....	218
13.5.	The parametric formulas for the portion of the boundary corresponding to functions which map the interior of the unit circle onto the plane minus an unforked analytic slit.....	223

CHAPTER	PAGE
XIV. A METHOD FOR INVESTIGATING THE CONJECTURE $ a_4 \leq 4$	226
14.1. Brief outline of the method.....	226
14.2. Formulas expressing a_2, a_3, a_4 in terms of the coefficients of the \mathcal{D}_4 -equation. Special case of these formulas when $\operatorname{Re}(a_4)$ is maximal....	227
14.3. The Prawitz form of the area-principle. Proof that $a_4^{(2)} = a_2^2 + 2a_3$ is not zero when $\operatorname{Re}(a_4) \geq 4$	228
14.4. Dissection of the Löwner formula for a_4 into terms J_2, J_4, J_6 , and I_1, I_3, I_5	229
14.5. Determination of a lower bound for J_2 in terms of an integral over a triangular region of the u, v plane. Proof that for points in the triangular region the integrand is a positive semi-definite quadratic form in the values $h(u), h(v)$	231
14.6. Determination of a lower bound for the integral of the quadratic form in terms of the integral of the square of the function $h(u)$. Proof of the existence of the minimizing function. The Sturm-Liouville system for the determination of the minimizing function.....	234
14.7. Calculation of the smallest eigen-value of the system.....	241
14.8. Determination of an upper bound for J_4	245
14.9. Proof that if the function $\alpha(u)$ differs from a constant by at most 0.08697 for $0 \leq u \leq 1$, then the coefficient a_4 given by Löwner's formula does not exceed 4 in modulus.....	247
14.10. Parametric formulas for a_2, a_3 obtained from the Q -function corresponding to maximal $\operatorname{Re}(a_4)$	250
14.11. Elimination of one of the real parameters for a large portion of the parameter domain.....	251
14.12. Integration of a system of differential equations over the remaining portion of the parameter domain.....	260
XV. THE REGION OF VALUES OF THE DERIVATIVE OF A SCHLICHT FUNCTION (by Arthur Grad).....	263
15.1. Definition of the region of values in the plane of $f'(z_0)$ (the region $R(z_0)$). The corresponding region of values for any simply-connected domain. The choice of a real $z_0 = r$. The symmetry of $R(r)$. The dependence of $R(r)$ on r . Interior points of $R(r)$. Definition of the region $L(r)$ in the logarithmic plane.....	263
15.2. The formulas for the boundary of $L(r)$	265
15.3. The differential equation satisfied by boundary functions. Investigation of the equation connecting φ, ψ, ρ , and r	268
15.4. The Γ_r -structure.....	274
15.5. Determination of the portion of the boundary corresponding to unforked functions.....	276
15.6. Determination of the portion of the boundary corresponding to forked functions.....	285
15.7. Proof that the internal angle of the region at the points where the boundary curves intersect is equal to π	290
APPENDIX	
Table I. Points (a_2, a_3) for which a_2 is real.....	292
Table II. Points (a_2, a_3) for which a_3 is real.....	298
BIBLIOGRAPHY.....	304
INDEX.....	307
