Preface

1	Extension of the First Main Theorem of Nevanlinna Theory and Interpretation by Hermitian Geometry	1
§ 1	Generalization of the Formula of Poisson-Jensen-Nevanlinna	1
§ 2	Interpretation by Hermitian Geometry	9
§ 3	The Generalized First Main Theorem	16
§ 4	The Example of Rational Vector Functions	27
2	Some Quantities arising in the Vector Valued Theory and their Relation to Nevanlinna Theory	34
§ 5	Properties of $V(r, a)$	34
§ 6	Properties of $T(r, f)$	39
§ 7	The Connection of $T(r, f), m(r, f)$ and $N(r, f)$ with $T(r, f_j), m(r, f_j)$ and $N(r, f_j)$	45
§ 8	The Order of Growth	51
3	Generalization of the Ahlfors-Shimizu Characteristic and its Connection with Hermitian Geometry	58
§ 9	The Generalized Ahlfors-Shimizu Characteristic $\overset{0}{T}(r, f)$	58
§10	The Generalized Riemann Sphere	68
§11	The Spherical Normal Form of the Generalized First Main Theorem	73
§12	The Mean Value Representation of $\overset{0}{T}(r, f)$	75
4	Additional Results of the Elementary Theory	82
§13	The Genus of a Meromorphic Vector Function	82
§14	Some Relations between $M, m ; N, n ; V, v$ and A	89

5	Extension of the Second Main Theorem of Nevanlinna Theory	110
§15	The Generalized Second Main Theorem	110
§16	The Generalized Deficiency Relation	129
§17	Further Results about Deficiencies	141
	Appendix: Rudiments of Complex Manifolds and Hermitian Geometry	168
	Bibliography	189
	Table of Symbols	197
	Index	199
