PREFACE	VII
Outline . . . . .	VIII
Note on This Manuscript . . . . .	XI
Acknowledgments . . . . .	XI
LIST OF DEFINITIONS	XVII
NOTATION	XXI
<b>I Background</b>	<b>1</b>
1 MATHEMATICAL NECESSITIES	3
1.1 Set Terminology . . . . .	3
1.2 Polyhedra . . . . .	7
1.2.1 Basic Definitions . . . . .	7
1.2.2 Extensions . . . . .	9
1.2.3 Geometric Operations on Polyhedra . . . . .	10
1.3 Function Terminology . . . . .	12

1.4	Constrained Optimization . . . . .	14
1.5	Multi-Parametric Programming . . . . .	17
2	SYSTEMS AND CONTROL THEORY . . . . .	20
2.1	Systems Formulation . . . . .	20
2.2	Invariance and Stability . . . . .	21
3	RECEDING HORIZON CONTROL . . . . .	26
3.1	Basic Idea . . . . .	27
3.2	Closed-form Solution to Receding Horizon Control . . . . .	28
3.2.1	Time-varying Model and System . . . . .	30
3.2.2	Comments on the Closed-form Solution . . . . .	31
3.3	Choice of the Cost Function . . . . .	32
3.4	Stability and Feasibility in Receding Horizon Control . . . . .	35
4	PIECEWISE AFFINE SYSTEMS . . . . .	39
4.1	Obtaining a PWA Model . . . . .	41
<b>II</b>	<b>Optimal Control of Constrained Piecewise Affine Systems</b> . . . . .	<b>43</b>
5	INTRODUCTION . . . . .	45
5.1	Software Implementation . . . . .	47
6	CONSTRAINED FINITE TIME OPTIMAL CONTROL . . . . .	48
6.1	CFTOC Solution via mp-MILP . . . . .	51
6.2	CFTOC Solution via Dynamic Programming . . . . .	53
6.3	An Efficient Algorithm for the CFTOC Solution . . . . .	54
6.4	Comments on the Dynamic Programming Approach for the CFTOC Problem . . . . .	56
6.5	Receding Horizon Control . . . . .	58
6.6	Examples . . . . .	59
6.6.1	Constrained PWA Sine-Cosine System . . . . .	60
6.6.2	Car on a PWA Hill . . . . .	61
7	CONSTRAINED INFINITE TIME OPTIMAL CONTROL . . . . .	64
7.1	Problem Formulation . . . . .	64
7.2	Closed-loop Stability of the CITOC Solution . . . . .	66
7.3	CITOC Solution via Dynamic Programming . . . . .	68
7.3.1	Initial Value Function and Rate of Convergence . . . . .	73
7.3.2	Stabilizing Suboptimal Control . . . . .	79
7.4	An Efficient Algorithm for the CITOC Solution . . . . .	80

7.4.1	Alternative Choices of the Initial Value Function . . . . .	84
7.5	Examples . . . . .	86
7.5.1	Constrained PWA Sine-Cosine System . . . . .	86
7.5.2	Constrained LTI System . . . . .	88
7.5.3	Car on a PWA Hill . . . . .	89

### **III Analysis and Post-processing Techniques for Piecewise Affine Systems** **93**

8	LINEAR VECTOR NORMS AS LYAPUNOV FUNCTIONS	95
8.1	Introduction . . . . .	95
8.2	Software Implementation . . . . .	97
8.3	Stability Theory for Linear Systems Using Linear Vector Norms .	97
8.4	Complex $W$ for Discrete-Time Systems . . . . .	98
8.5	Construction of a Real $W$ for Discrete-Time Systems . . . . .	99
8.6	Simple Algebraic Test to Substitute the Feasibility LP (8.8) . . . .	106
8.7	Computational Complexity and Finite Termination . . . . .	107
8.7.1	Boundedness of $m$ and Finite Termination . . . . .	107
8.7.2	A Complexity Comparison . . . . .	109
8.8	Polyhedral Positive Invariant Sets . . . . .	110
8.9	Guaranteeing Exponential Stability in Receding Horizon Control for Piecewise Affine Systems . . . . .	110
8.10	Examples . . . . .	112
9	STABILITY ANALYSIS	114
9.1	Introduction . . . . .	114
9.2	Constrained Finite Time Optimal Control of Piecewise Affine Systems . . . . .	115
9.3	Closed-Loop Stability and Feasibility . . . . .	116
9.3.1	Computation of the Maximal Positively Invariant Set . . . .	118
9.3.2	Computation of the Lyapunov Stability Region . . . . .	123
9.4	Examples . . . . .	128
9.4.1	Constrained Double Integrator . . . . .	128
9.4.2	Constrained PWA Sine-Cosine System . . . . .	129
9.4.3	Constrained PWA System . . . . .	131
9.4.4	3-Dimensional Constrained PWA System . . . . .	133
10	STABILITY TUBES	135
10.1	Introduction . . . . .	135
10.2	Constrained Finite Time Optimal Control of Piecewise Affine Systems . . . . .	136

10.3	Stability Tubes for Nonlinear Systems . . . . .	139
10.4	Computation of Stability Tubes for Piecewise Affine Systems . . .	143
10.5	Comments on Stability Tubes . . . . .	144
10.6	Examples . . . . .	147
10.6.1	Constrained PWA Sine-Cosine System . . . . .	147
10.6.2	Car on a PWA Hill . . . . .	148
11	EFFICIENT EVALUATION OF PIECEWISE CONTROL LAWS OVER A LARGE NUMBER OF POLYHEDRA . . . . .	150
11.1	Introduction . . . . .	150
11.2	Software Implementation . . . . .	151
11.3	Point Location Problem . . . . .	152
11.4	Constrained Finite Time Optimal Control of Piecewise Affine Systems . . . . .	152
11.5	Alternative Search Approaches . . . . .	154
11.6	The Proposed Search Algorithm . . . . .	156
11.6.1	Bounding Box Search Tree . . . . .	157
11.6.2	Local Search . . . . .	159
11.7	Complexity . . . . .	159
11.8	Examples . . . . .	160
11.8.1	Constrained LTI System . . . . .	160
11.8.2	Constrained PWA System . . . . .	162
11.8.3	Ball & Plate System . . . . .	163
<b>IV</b>	<b>Appendix</b> . . . . .	<b>167</b>
A	ALTERNATIVE PROOF OF LEMMA 7.7(A) . . . . .	169
	BIBLIOGRAPHY . . . . .	171
	AUTHOR INDEX . . . . .	183
	INDEX . . . . .	187
