Editors' preface . . . . .	vii
Foreword . . . . .	ix

<b>CHAPTER I Vector spaces . . . . .</b>	<b>1</b>
0 Notions from set theory	1
1 Examples and definitions	4
2 Bases	9
3 Dimension	12
4 Isomorphism theorems	14
5 Duals and adjoints	16
6 Exercises	18

<b>CHAPTER II Metric spaces . . . . .</b>	<b>20</b>
7 Definitions and examples	20
8 Open and closed sets	21
9 Continuous functions	24
10 Compactness	25
11 Completeness	28
12 Exercises	33

<b>CHAPTER III Banach spaces . . . . .</b>	<b>35</b>
13 Definitions and examples	35
14 Finite dimensional case	38
15 The space $L(E, F)$	41
16 The algebra $L(E, E)$	44
17 The Hahn-Banach theorem	45
18 Exercises	50

<b>CHAPTER IV Some special Banach spaces . . . . .</b>	<b>53</b>
19 Hilbert space	53
20 $c_0$ , $l^1$ , and $l^\infty$	59
21 The $l^p$ -spaces	63
22 Differentiable functions	65
23 Hölder continuous functions	69
24 Exercises	74

<b>CHAPTER V</b>	<b>Some important classes of operators</b>	<b>76</b>
	25 Compact operators	76
	26 Operators in Hilbert space	81
	27 Nuclear operators	89
	28 Fredholm operators	96
	29 Exercises	104
<b>CHAPTER VI</b>	<b>Chains and nuclear spaces</b>	<b>107</b>
	30 Continuous chains	107
	31 Compact chains	110
	32 Nuclear chains and spaces	111
	33 Exercises	114
<b>CHAPTER VII</b>	<b>Remarks and references</b>	<b>116</b>
	Glossary of symbols	121
	Index	123
