

CONTENTS

<i>Foreword</i>	XI
---------------------------	----

Chapter I. Partially ordered sets

§ 1. General concept of partially ordered set	1
§ 2. Nets and directions	3
§ 3. Limit of a numerical direction.	6
§ 4. Limit of a direction in a topological space.	8
§ 5. Maximal and minimal elements. Zorn's lemma.	9
§ 6. Suprema and infima	11
§ 7. Isomorphism of partially ordered sets	13

Chapter II. Lattices

§ 1. General notions about lattices	14
§ 2. Sublattices	16
§ 3. Complete and Dedekind complete lattices.	17
§ 4. Distributive lattices	21
§ 5. Boolean algebras	24
§ 6. Order convergence.	26
§ 7. Order topology in lattices.	33
§ 8. Some applications of lattices in topology	35
§ 9. Representation of a Boolean algebra in the form of a ring of open-closed sets	37

Chapter III. Linear lattices

§ 1. Definition of a linear lattice.	44
§ 2. Another approach to the definition of a linear lattice – the concept of a Riesz space	46
§ 3. Examples of Riesz spaces.	50
§ 4. Representation of the elements of a linear lattice in the form of the difference of positive elements. Absolute value of an element	52

§ 5. Distributivity of a linear lattice	54
§ 6. Disjoint elements and disjoint sets	56
§ 7. (o)-convergence in Riesz spaces	60
§ 8. ($*$)-convergence in Riesz spaces	63
§ 9. Ideals	63
§ 10. The axiom of Archimedes and consequences of it	66
§ 11. Convergence with respect to a regulator	67
§ 12. Riesz spaces with unit	69
§ 13. Discrete elements	73
§ 14. Finite-dimensional Riesz spaces	74

Chapter IV. Dedekind complete Riesz spaces

§ 1. Definition of a Dedekind complete Riesz space and of a Dedekind σ -complete Riesz space and their simplest properties	77
§ 2. Dedekind σ -complete Riesz spaces with unit.	81
§ 3. Projection on a band.	82
§ 4. Properties of the projection operator	87
§ 5. Decomposition of a Dedekind σ -complete Riesz space into bands	88
§ 6. Union of Dedekind complete Riesz spaces	92
§ 7. Decomposition of a Dedekind complete Riesz space into bands with unit and embedding of an arbitrary Dedekind complete Riesz space in a Dedekind complete Riesz space with unit	95
§ 8. Trace of an element in Dedekind σ -complete Riesz spaces with unit	96
§ 9. Series in Dedekind σ -complete Riesz spaces	100
§ 10. Integral representation of elements.	102
§ 11. Completion of an Archimedean Riesz space to a Dedekind complete Riesz space.	108
§ 12. Discrete Dedekind complete Riesz spaces	113

Chapter V. Representation of linear lattices with the aid of continuous functions on compacta

§ 1. Semi-continuous functions	117
§ 2. Dedekind complete Riesz space of continuous functions on a compactum	122
§ 3. Representation of the Dedekind complete Riesz space of bounded elements with the aid of continuous functions	127
§ 4. Embedding of an arbitrary Dedekind complete Riesz space in a Dedekind complete Riesz space of continuous functions	133

§ 5. Extended Dedekind σ -complete Riesz spaces	140
§ 6. Maximal extension of a Dedekind complete Riesz space.	142
§ 7. Representation of Archimedean Riesz spaces. Theorem on the preservation of relations	145
§ 8. Partially ordered rings	146

Chapter VI. Dedekind complete Riesz spaces of countable type

§ 1. Boolean algebras of countable type	154
§ 2. Dedekind complete Riesz spaces of countable type.	156
§ 3. (o) -topology in Dedekind complete Riesz spaces of countable type	158
§ 4. Almost regular Dedekind complete Riesz spaces	160
§ 5. Regular Dedekind complete Riesz spaces	161
§ 6. Extended regular Dedekind complete Riesz spaces	165

Chapter VII. Normed lattices and countably-normed lattices

§ 1. Normed lattices	173
§ 2. Banach lattices	177
§ 3. Dedekind complete normed lattices and Dedekind σ -com- plete normed lattices.	178
§ 4. Normability of a Riesz space of bounded elements	179
§ 5. Representation of a normed lattice of bounded elements with the aid of continuous functions	182
§ 6. KB -spaces	188
§ 7. KB -spaces with additive norm	195
§ 8. Countably-normed lattices	197

Chapter VIII. Linear operators

§ 1. Fundamental definitions	204
§ 2. Dedekind complete Riesz space of regular operators	207
§ 3. (σ) -linear operators.	214
§ 4. Completely linear operators	219
§ 5. Normal operators and σ -normal operators.	221
§ 6. Linear operators in normed lattices	224
§ 7. Linear operators in KB -spaces.	228
§ 8. Linear operators in countably-normed lattices.	232
§ 9. Additive functions on a Boolean algebra	233
§ 10. Integral representation of linear operators	237

Chapter IX. Linear functionals

§ 1. Regular functionals	245
§ 2. (o) -linear functionals and completely linear functionals	247

§ 3. (o)-linear functionals in the Dedekind complete Riesz space of bounded elements	251
§ 4. Linear functionals in normed lattices and in countably-normed lattices	255
§ 5. Embedding of a Riesz space in the second conjugate Dedekind complete Riesz space	261
§ 6. Reflexive Dedekind complete Riesz spaces	267
§ 7. Embedding of a normed lattice in the second (b)-conjugate space.	269

Chapter X. Extension of linear operators

§ 1. Extension of (bo)-linear operators	272
§ 2. Extension of (b)-linear operators.	275
§ 3. Extension of positive operators	277
§ 4. Extension of regular operators from an Archimedean Riesz space to its Dedekind completion	278
§ 5. Extension of some (o)-linear functionals.	281
§ 6. Applications to the theory of the integral	291

Chapter XI. Application to the theory of self-adjoint operators in Hilbert space

§ 1. Fundamental information about self-adjoint operators	295
§ 2. Dedekind complete Riesz spaces of bounded self-adjoint operators	298
§ 3. Existence of the principal unit in a strongly closed ring of bounded self-adjoint operators.	305
§ 4. Spectral decomposition of self-adjoint operators	308
§ 5. Boolean measure on the real line.	312
§ 6. Condition of countable additivity of a Boolean measure.	320
§ 7. Measurable functions of elements of a Dedekind complete Riesz space	323
§ 8. Functions of a bounded self-adjoint operator	330

Chapter XII. Functional equations

§ 1. Lattice-normed spaces	334
§ 2. General theorems on the method of successive approximations	337
§ 3. Application of the general theorems to linear equations.	341
§ 4. Derivative of an operator.	349
§ 5. Newton's method	354
§ 6. Monotonic processes of successive approximations	357

Chapter XIII. Partially ordered normed spaces

§ 1. Krein spaces	362
§ 2. Positive (b)-linear functionals in Krein spaces	366
§ 3. Krein lattices and their representation	372
§ 4. On fixed points of adjoint operators	374
<i>Literature</i>	379
<i>Index</i>	385
