

## TABLE OF CONTENTS

Introduction. . . . .	1
<b>Chapter I. Abstract Triangular Representation of Completely Continuous Operators . . . . .</b>	<b>8</b>
1. Notation and some well-known results . . . . .	8
2. Theorem on the existence of a proper invariant subspace for any completely continuous operator. . . . .	11
3. Maximal chains of orthoprojectors for a completely continuous operator . . . . .	14
4. The general notion of an integral with respect to a chain . . . . .	18
5. Abstract triangular representation of an operator by means of its chains . . . . .	21
6. Inversion of the theorem on the abstract triangular representation of operators . . . . .	26
7. Simple operators, the rank of a chain and the rank of an operator . . . . .	29
8. Volterra operators with a one-dimensional imaginary component. . . . .	33
9. Unicellular operators . . . . .	35
10. The integral of triangular truncation in the class of Hilbert-Schmidt operators . . . . .	40
<b>Chapter II. General Theorems on Transformers. . . . .</b>	<b>47</b>
1. $s$ -numbers of completely continuous operators and their properties . . . . .	48
2. Auxiliary lemmas. . . . .	50
3. A theorem on transformers . . . . .	52
4. Two theorems on real transformers . . . . .	57
5. Examples of real symmetric transformers . . . . .	61
6. The constants $C_{mj}$ for the transformers $\mathcal{E}$ and $\mathcal{S}$ . . . . .	67

<b>Chapter III. The Transformator of Triangular Truncation. Relations Between the Spectra of the Hermitian Components of Volterra Operators . . . . .</b>	<b>76</b>
1. Symmetrically-normed ideals . . . . .	76
2. Volterra operators with nuclear imaginary component. . . . .	83
3. General properties of the transformator of triangular truncation in s.n. ideals . . . . .	93
4. Volterra operators with imaginary component from $\mathfrak{S}_\omega$ . . . . .	103
5. Two interpolation theorems in the spaces $\mathfrak{S}_p$ . . . . .	113
6. Volterra operators with imaginary component from $\mathfrak{S}_p$ ( $1 < p < \infty$ ) . . . . .	118
7. Convergence of the integral triangular truncation in the norm of an s.n. ideal . . . . .	126
8. A general theorem on transformators . . . . .	133
9. Volterra operators with imaginary component belonging to one of the s.n. ideals $\mathfrak{S}_\Pi^{(0)}$ , $\mathfrak{S}_r$ , $\mathfrak{S}_\Pi$ . . . . .	139
10. Applications to the Riesz-Titchmarsh transform . . . . .	144
<b>Chapter IV. The Factorization of Operators Which Are Close to the Unit Operator . . . . .</b>	<b>156</b>
1. Statement of the problem of the factorization of operators along a chain . . . . .	157
2. General theorems on the factorization of operators . . . . .	160
3. The factorization of operators which differ from the unit operator by a finite-dimensional operator. . . . .	163
4. An auxiliary lemma concerning factorization in normed rings . . . . .	167
5. The basic theorem on the factorization of operators in s.n. ideals . . . . .	173
6. The special factorization of operators along a chain with gaps . . . . .	176
7. The factorization of Fredholm operators of the second kind . . . . .	183
8. A special method for the solution of linear integral equations . . . . .	189
9. Concluding remarks . . . . .	205
10. Appendix. A general theorem on the convergence of the integral along a chain . . . . .	208
<b>Chapter V. Triangular Models of Volterra Operators . . . . .</b>	<b>212</b>
1. Eigen-projector-functions of a completely continuous operator . . . . .	213
2. Triangular model of a Volterra operator. . . . .	219
3. Canonical triangular model of a Volterra operator . . . . .	224

4. The monodromy matrix-function as an invariant of a model representation. The characteristic matrix-function . . . . .	232
5. Triangular models of real Volterra operators . . . . .	238
<b>Chapter VI. Selfadjoint Boundary Value Problems for a Canonical Equation. Tests for the Stable Boundedness of the Solutions of a Canonical Equation with a Periodic <math>H</math>-matrix . . . . .</b>	<b>244</b>
1. Selfadjoint boundary value problem for a canonical equation . . . . .	246
2. Skewperiodic boundary value problems and model operators . . . . .	259
3. Central zone of stability of a canonical differential equation with a periodic $H$ -matrix . . . . .	265
4. Tests for the stable boundedness of the solutions of a periodic canonical equation . . . . .	271
5. A test for the stable boundedness of the solutions of a differential system of second order with periodic coefficients . . . . .	284
6. Characteristics of the distribution density of the spectrum of a selfadjoint canonical boundary value problem . . . . .	293
7. Characteristics of the distribution density of the spectrum of a second-order boundary value problem . . . . .	298
8. The spectrum of an inhomogeneous string with an arbitrary mass distribution . . . . .	307
<b>Chapter VII. Fundamental Theorem on the Density of the Spectrum of the Real Component of a Volterra Operator with Nuclear Imaginary Component . . . . .</b>	<b>314</b>
1. Formulation of the basic theorem on the equality of the functionals $h(\cdot; \mathfrak{P})$ and $l(\cdot; \mathfrak{P})$ . . . . .	314
2. The functionals $h$ and $l$ as functionals of the $H$ -matrix . . . . .	320
3. Conclusion of the proof of the fundamental theorem . . . . .	329
4. Proof of the theorem on the asymptotic behavior of the spectrum of a selfadjoint canonical boundary value problem . . . . .	341
5. Asymptotic properties of the characteristic numbers for a class of integral equations . . . . .	345
<b>Appendix. Unicellular Operators and Related Analytic Problems . . . . .</b>	<b>349</b>
1. The decomposition of simple dissipative Volterra operators into sums of unicellular operators . . . . .	350
2. A basic criterion for the unicellularity of a dissipative Volterra operator with nuclear imaginary component . . . . .	353

3. Unicellular contractions . . . . .	364
4. The problem of unicellularity and inverse problems for a canonical equation . . . . .	375
5. Real unicellular operators and related analytic problems . . . .	385
6. Examples of unicellular and nonunicellular operators . . . . .	397
Bibliography . . . . .	405
Index . . . . .	419
