Preface iii

Introduction 1

§1. Topological notions 1
§2. Integration 6
§3. Normed linear spaces and Hilbert spaces 9
§4. Classes of functions. Functional spaces 13
§5. The concept of Sobolev space 16
§6. The concept of imbedding theorems 17
§7. Some inequalities relating the Sobolev norm and the space $\overset{0}{W}{}_p^l(G)$ 20
§8. The notion of a generalized function 22
§9. The notion of a generalized derivative in the sense of S. L. Sobolev 24
§10. Averaging operators 26
§11. A second definition of a generalized derivative in the sense of S. L. Sobolev, and a characterization of the elements of a Sobolev space 28

Chapter I. Spaces with negative norms and generalized functions 31
§1. General theory of spaces with negative norms 32
§2. Tensor products and generalized kernels 39
§3. Examples of systems of generalized functions 50
§4. Equipment by means of linear topological spaces 66

Chapter II. Boundary value problems. General concepts 69
§1. General information concerning differential expressions 70
§2. The existence of solutions of the boundary value problem in the space $L_2(G)$ 79
§3. Generalized solutions of boundary value problems 87

Chapter III. Boundary value problems and smooth generalized solutions for elliptic equations. Green's function 103
§1. Lower estimates for quadratic forms on finite functions 103

§2. Boundary value problems for strongly elliptic equations. Generalized solutions 113
§3. Boundary value problems for elliptic equations. Smooth solutions 121
§4. Smoothness of solutions of elliptic equations 161
§5. Green's function 183
§6. Boundary value problems and smoothness of generalized solutions up to the boundary for elliptic equations in the case of general boundary conditions 204

Chapter IV. Boundary value problems. Other types of equations 263
§1. General differential expressions with constant coefficients 263
§2. The problem of Dirichlet type for second order differential expressions with constant coefficients 279
§3. Equations of mixed type 298

Chapter V. General theory of expansions of selfadjoint operators in generalized eigenvectors 317
§1. Procedure for defining resolution of the identity 317
§2. Expansion in generalized eigenvectors 330
§3. Expansions in generalized eigenfunctions of operators on the space $L_2(G)$ 344
§4. Eigenfunction expansions of Carleman operators 350
§5. Growth estimates of eigenfunctions at infinity 360

Chapter VI. Spectral theory for selfadjoint partial differential operators 375
§1. Differential operators in an unbounded region 375
§2. Spectral theory of selfadjoint elliptic operators 396
§3. Spectral theory of general selfadjoint differential operators 442
§4. Separation of variables 462
§5. Spectral theory of ordinary selfadjoint differential operators 493

Chapter VII. Spectral theory of selfadjoint difference operators 501
§1. Second order difference operators on the semi-axis (Jacobi matrices) 501
§2. Second order difference expressions with operator coefficients on the semi-axis 547
§3. Second order difference operators on the whole axis 580
§4. Partial difference operators of the second order in a half-plane 588

Chapter VIII. Representation of a positive definite kernel in terms of elementary kernels 609

§1. General outline 610

§2. Existence of selfadjoint commuting extensions, and the question of uniqueness 622

§3. Continuous positive definite kernels, *-commuting with one differential operator 641

§4. The case of $q > 1$ differential operators 693

§5. Positive definite kernels *-commuting with difference operators 712

§6. Results connected with partial differential operators 739

Notes on the Literature 749

Introduction 749

Chapter I 749

Chapter II 751

Chapter III 751

Chapter IV 756

Chapter V 757

Chapter VI 760

Chapter VII 763

Chapter VIII 764
