

## CONTENTS

Preface	v
Conference on Functional Analysis, Paderborn 1976: Schedule of lectures	vii
Conference on Functional Analysis, Paderborn 1976: Participants	viii
Contributors	viii
Contents	xi
R.E. Huff, The Radon-Nikodým property for Banach-spaces - a survey of geometric aspects	1
W. Lusky, Separable Lindenstrauss spaces	15
E. Behrends, An application of M-structure to theorems of the Banach-Stone type	29
W. Hackenbroch, Representation of vector lattices by spaces of real functions	51
M. Wolff, On the theory of approximation by positive operators in vector lattices	73
J. Schmets, Spaces of continuous functions	89
W. Ruess, The strict topology and (DF)-spaces	105
H. Buchwalter, Espaces de mesures et partitions continues de l'unité	119
B. Gramsch, An extension method of the duality theory of locally convex spaces with applications to extension kernels and the operational calculus	131
W. Kabballo, Lifting theorems for vector-valued functions and the $\epsilon$ -tensor product	149
D. Vogt, Subspaces and quotient spaces of (s)	167
R. Meise, Representation of distributions and ultradistributions by holomorphic functions	189
M. Schottenloher, Richness of the class of holomorphic functions on an infinite dimensional space	209
H. König, Abstract Hardy algebra theory	227
S.D. Chatterji and V. Mandrekar, Singularity and absolute continuity of measures	247
E. Albrecht, Generalized spectral operators	259
J.D.M. Wright and M.A. Youngson, A Russo Dye theorem for Jordan $C^*$ -algebras	279
J.D.M. Wright, Functional analysis for the practical man	283
