	5
ALGEBRAIC PRELIMINARIES	7
Linear spaces and algebras	7
	13
Linear operators	18
Direct sum of linear subspaces	24
Ascent and descent	26
Appendix	29
METRIC SPACES	32
Fundamental notions	32
Closed and open sets	34
Continuous mappings	37
Compact sets	39
Complete metric spaces	41
Connected sets	44
SELECTED TOPICS FROM FUNCTIONAL ANALYSIS	46
Normed spaces and algebras	47
Continuous linear operators	56
Open mapping theorem	60
Continuous linear functionals	63
Dual operator	69
HILBERT SPACES	71
Inner product spaces	71
Hilbert space	74
<del>-</del>	76
	78
Normal operators	82
	Linear spaces and algebras Finite - dimensional linear spaces Linear operators Direct sum of linear subspaces Ascent and descent Appendix  METRIC SPACES Fundamental notions Closed and open sets Continuous mappings Compact sets Complete metric spaces Connected sets  SELECTED TOPICS FROM FUNCTIONAL ANALYSIS Normed spaces and algebras Continuous linear operators Open mapping theorem Continuous linear functionals Dual operator  HILBERT SPACES Inner product spaces Hilbert space Orthogonal complement Hermitian adjoint operator

Chapter 5	ELEMENTS OF MATHEMATICAL ANALYSIS	86
	Continuity and derivative	86
	Power series	93
	Riemann integral	105
	Holomorphic functions	114
Chapter 6	SPECTRAL PROPERTIES	138
	Theorem on the Neumann series and its consequences	138
	Resolvent set, resolvent function	141
	Spectrum	143
	Point spectrum of linear continuous operators	147
	Properties of the spectral radius	150
Chapter 7	RIESZ OPERATOR CALCULUS	156
	Laurent series of the resolvent function	157
	Weyr theorem	162
	Elements with the property "P"	164
	"Holomorphic" functions of elements of the Gel'fand algebra	171
	Lagrange - Sylvester Formula	173
	Rational resolvent function	182
	Appendix	186
