

## CONTENTS

I.	<i>Introduction</i> . . . . .	11
II.	<i>The Scalar, the Electromagnetic, and the Elastic Boundary Value Problems, and Weyl's Results</i> . . . . .	13
	1. The Scalar Problem . . . . .	13
	2. The Electromagnetic Problem . . . . .	15
	3. The Elastic Problem . . . . .	16
	4. Some Pre-Weylian Results . . . . .	18
III.	<i>Mathematical Methods and General O-Results</i> . . . . .	19
	1. The Methods of Weyl and Courant . . . . .	19
	2. The Carleman Procedures . . . . .	20
	3. Refinements of the Asymptotic Laws . . . . .	23
	(a) The scalar problem . . . . .	23
	(b) The electromagnetic problem . . . . .	24
	(c) The elastic problem . . . . .	25
	(d) Summary . . . . .	25
IV.	<i>Mathematical Methods Continued: Averaging Procedures</i> . . . . .	27
	1. Fluctuations and Average Mode Density . . . . .	27
	2. Analytical Averaging Procedures . . . . .	30
	(a) Logarithmic Gaussian . . . . .	30
	(b) Lorentzian . . . . .	32
	(c) Integral transforms . . . . .	34
	( $\alpha$ ) Fedosov's transform . . . . .	34
	( $\beta$ ) Lambert transform . . . . .	34
	( $\gamma$ ) Wentzel's method . . . . .	35
	( $\delta$ ) Pre-Tauberian results . . . . .	36
	3. Computational Methods . . . . .	36
	(a) Computation of the eigenvalues . . . . .	37
	( $\alpha$ ) The rectangular parallelepiped . . . . .	37
	( $\beta$ ) The circular cylinder . . . . .	37
	( $\gamma$ ) The sphere . . . . .	39
	(b) Computational averaging . . . . .	39
	(c) Computational versus analytical methods . . . . .	40
V.	<i>O- and <math>\bar{O}</math>-Results for the Square and the Cube</i> . . . . .	42
	1. Lattice-Type Spectra . . . . .	42
	2. The Square and the Rectangular Domain . . . . .	43
	(a) Eigenvalues and eigenfunctions for Dirichlet, Neumann, mixed, and general boundary conditions . . . . .	43
	(b) <i>O</i> -results and the circle problem . . . . .	44
	(c) $\bar{O}$ -results . . . . .	47

3. The Cube-Shaped Domain . . . . .	47
(a) The solutions of the scalar and the electromagnetic problems and their connection with the lattice-point problem . . . . .	47
(b) $O$ -results and the sphere problem . . . . .	49
(c) $\bar{O}$ -results . . . . .	51
( $\alpha$ ) Brownell's average . . . . .	51
( $\beta$ ) The Gaussian ensemble average . . . . .	52
( $\gamma$ ) The Lambert transform and the Poisson sum formula . . . . .	52
(d) Computer results for the cube and the flat box . . . . .	54
( $\alpha$ ) Dirichlet and Neumann boundary conditions . . . . .	54
( $\beta$ ) The electromagnetic problem . . . . .	55
(e) The number 130 and the mean level-spacing . . . . .	56
VI. $\bar{O}$ -Results for General Domains . . . . .	59
1. Two-Dimensional Domains (the Membrane Problem) . . . . .	59
(a) Brownell's results . . . . .	59
(b) Corners and cusps . . . . .	60
(c) The circle and general smooth boundary curves . . . . .	62
(d) On hearing the shape of a drum . . . . .	64
2. Three-Dimensional Domains (the Resonant Cavity) . . . . .	65
(a) Surface contributions . . . . .	65
( $\alpha$ ) The scalar problem (Dirichlet, Neumann, and general boundary conditions) . . . . .	65
( $\beta$ ) The electromagnetic problem and the vanishing of the surface term . . . . .	66
( $\gamma$ ) The elastic problem (surface specific heat and mode scrambling) . . . . .	67
(b) Edge and curvature terms . . . . .	68
( $\alpha$ ) The scalar problem (smooth boundary surface, polyhedra, and general cylinders) . . . . .	68
( $\beta$ ) The electromagnetic problem (general cylinders and the sphere) . . . . .	71
(c) The constant term (corners and connectivity) . . . . .	73
(d) Scalar versus electromagnetic . . . . .	74
(e) The oscillations . . . . .	75
VII. Physical Applications . . . . .	77
1. Resonator Acoustics . . . . .	77
2. Perfect Gases . . . . .	78
3. Nuclei . . . . .	81
4. Black-Body Radiation . . . . .	84
5. Correlation Functions . . . . .	88
6. Condensed Matter . . . . .	91
(a) The Bose-Einstein condensation in thin films . . . . .	91
(b) The specific heat of grains at low temperatures . . . . .	93
VIII. Some Open Problems and Extensions . . . . .	98
1. $\bar{O}$ -Results for the Elastic Problem . . . . .	98

*Contents*

	9
2. The Schrödinger Wave Equation with Non-Rigid Walls	98
3. The Black-Body Cavity with Absorbing Walls . . .	99
4. Inhomogeneous Media . . . . .	100
5. The Inverse Problems . . . . .	100
<i>Post-Deadline Note</i> . . . . .	102
<i>References</i> . . . . .	105
<i>Index</i> . . . . .	113
