Contents

1. Set Theoretic Preliminaries 1
   1. Sets and Members 1
   2. Relations 4
   3. Equivalence Relations 5
   4. The Principle of Choice 7
   5. Zorn's Lemma 8
   6. The Functional Equation 15
   Problems 19

2. Normed Linear Spaces and Algebras 23
   1. Definitions 23
   2. Topology in a Normed Linear Space 28
   3. R as a Normed Linear Space 32
   4. The Cartesian Product of Normed Linear Spaces . . 34
   Problems 36

3. Functions on Banach Spaces 39
   1. Continuous Functions 39
   2. The Spaces $C^F(a, b)$ 42
   3. Continuous Operators 44
   4. Spaces of Bounded Linear Operators 45
   5. Existence Theorems for Integral Equations and Differential Equations 51
   6. The Hahn-Banach Extension Theorem 60
   7. The Existence of Green's Function 67
   Problems 74

4. Homomorphisms on Normed Linear Spaces . . . 77
   1. Homomorphisms on Linear Spaces 77
   2. Norms in a Quotient Space 79
   3. Homomorphisms on Normed Linear Algebras . . 82
   4. Inverses of Elements in Normed Linear Algebras . . 84
   Problem 89

5. ANALYTIC FUNCTIONS INTO A BANACH SPACE . . . 91
1. Derivatives 91
2. Integrals of Banach-Space Valued Functions . . . 92
3. Line Integrals and Cauchy's Theorem 96
4. Banach Algebras which are Fields 100
5. The Convolution Algebra l^1 101
Problems 107
