Preface	vii
1 Degree theory in finite dimensional spaces	1
1.1 Definition of degree for $C^1$ functions	2
1.2 Towards a definition for continuous functions	8
1.3 Admitting critical values	13
1.4 Continuous functions	17
2 Properties of degree in finite dimensional spaces	23
2.1 Changes in $\phi$ and $p$	23
2.2 Changes in the domain $D$	26
2.3 The multiplication theorem	29
2.4 Mappings defined on manifolds	32
3 Some topological applications	34
3.1 The Brouwer fixed point theorem	34
3.2 Odd mappings	38
3.3 The Jordan separation theorem	47
4 Leray–Schauder degree	52
4.1 Introductory remarks	52
4.2 Definition of the Leray–Schauder degree	54
4.3 Properties of the Leray–Schauder degree	60
4.4 Fixed point theorems	67
5 Axiomatic treatment	72
5.1 Axioms for degree theory	72
5.2 General theory	79
5.3 The uniqueness of the Leray–Schauder degree	86
6 Condensing maps and $k$ -set contractions	89
6.1 Measure of non-compactness	89
6.2 Degree for condensing maps	95
6.3 Fixed point theorems	102

7	Generalised degree	107
7.1	Intertwined representations	107
7.2	$A$ -proper mappings	110
7.3	Multivalued mappings	115
8	Differentiable mappings	121
8.1	Calculation of degree	121
8.2	Another definition of degree	123
9	Some applications of degree theory	129
9.1	Periodic solutions (I)	129
9.2	Periodic solutions (II)	135
9.3	Holomorphic mappings and differential equations	145
9.4	Boundary value problems	151
9.5	Bifurcation theory	155
9.6	Other applications	162
	References	165
	Index	171
