Preface 9

PART I DISTRIBUTION THEORY AND GREEN'S FUNCTIONS

Chapter 1 Generalised Functions

1.1 The Delta Function 12
1.2 Basic Distribution Theory 15
1.3 Operations on Distributions 19
1.4 Convergence of Distributions 24
1.5 Further Developments 26
1.6 Fourier Series and the Poisson Sum Formula 30
1.7 Summary and References 33
Problems 33

Chapter 2 Differential Equations and Green's Functions

2.1 The Integral of a Distribution 37
2.2 Linear Differential Equations 39
2.3 Fundamental Solutions of Differential Equations 41
2.4 Green's Functions 45
2.5 Applications of Green's Functions 48
2.6 Summary and References 51
Problems 51

Chapter 3 Fourier Transforms and Partial Differential Equations

3.1 The Classical Fourier Transform 53
3.2 Distributions of Slow Growth 56
3.3 Generalised Fourier Transforms 60
3.4 Generalised Functions of Several Variables 64
3.5 Green's Function for the Laplacian 67
3.6 Green's Function for the Three-Dimensional Wave Equation 74
3.7 Summary and References 78
Problems 78

PART II BANACH SPACES AND FIXED POINT THEOREMS

Chapter 4 Normed Spaces
4.1 Vector Spaces 84
4.2 Normed Spaces 91
4.3 Convergence 95
4.4 Open and Closed Sets 98
4.5 Completeness 104
4.6 Equivalent Norms 110
4.7 Summary and References 112
Problems 112

Chapter 5 The Contraction Mapping Theorem
5.1 Operators on Vector Spaces 116
5.2 The Contraction Mapping Theorem 120
5.3 Application to Differential and Integral Equations 123
5.4 Nonlinear Diffusive Equilibrium 128
5.5 Nonlinear Diffusive Equilibrium in Three Dimensions 131
5.6 Summary and References 134
Problems 134

Chapter 6 Compactness and Schauder's Theorem
6.1 Continuous Operators 139
6.2 Brouwer's Theorem 144
6.3 Compactness 149
6.4 Relative Compactness 152
6.5 Arzelà's Theorem 155
6.6 Schauder's Theorems 158
6.7 Forced Nonlinear Oscillations 160
6.8 Swirling Flow 165
6.9 Summary and References 170
Problems 171

PART III OPERATORS IN HILBERT SPACE

Chapter 7 Hilbert Space
7.1 Inner Product Spaces 176
7.2 Orthogonal Bases 180
7.3 Orthogonal Expansions 183
7.4 The Bessel, Parseval, and Riesz-Fischer Theorems 188
7.5 Orthogonal Decomposition 192
7.6 Functionals on Normed Spaces 195

7.7 Functionals in Hilbert Space 198
7.8 Weak Convergence 199
7.9 Summary and References 205
Problems 206

Chapter 8 The Theory of Operators
8.1 Bounded Operators on Normed Spaces 210
8.2 The Algebra of Bounded Operators 214
8.3 Self-Adjoint Operators 221
8.4 Eigenvalue Problems for Self-Adjoint Operators 226
8.5 Compact Operators 230
8.6 Summary and References 234
Problems 235

Chapter 9 The Spectral Theorem
9.1 The Spectral Theorem 240
9.2 Sturm-Liouville Systems 245
9.3 Partial Differential Equations 252
9.4 The Fredholm Alternative 257
9.5 Projection Operators 260
9.6 Summary and References 268
Problems 269

Chapter 10 Variational Methods
10.1 Positive Operators 274
10.2 Approximation to the First Eigenvalue 277
10.3 The Rayleigh-Ritz Method for Eigenvalues 281
10.4 The Theory of the Rayleigh-Ritz Method 284
10.5 Inhomogeneous Equations 292
10.6 Complementary Bounds 296
10.7 Summary and References 301
Problems 301

PART IV FURTHER DEVELOPMENTS

Chapter 11 The Differential Calculus of Operators and its Applications
11.1 The Fréchet Derivative 308
11.2 Higher Derivatives 312
11.3 Maxima and Minima 316
11.4 Linear Stability Theory 319
11.5 Nonlinear Stability 323
11.6 Bifurcation Theory 326

11.7 Bifurcation and Stability 330
11.8 Summary and References 334

Chapter 12 Distributional Hilbert Spaces
12.1 The Space of Square-Integrable Distributions 336
12.2 Sobolev Spaces 340
12.3 Application to Partial Differential Equations 343
12.4 Summary and References 345

Appendices
A Sets and Mappings 347
B Sequences, Series, and Uniform Convergence 348
C Sup and Inf 352
D Countability 354
E Equivalence Relations 357
F Completion 357
G Sturm-Liouville Systems 360
H Fourier's Theorem 362
I Proofs of 9.24 and 9.25 364

Notes on the Problems 367
