

## CONTENTS

Foreword.....	vii
Chapter I - The Carathéodory Approach .....	1
1. Optimal Control Problems.....	1
2. Hamiltonian Systems.....	12
Chapter II - Infinite-dimensional Optimization.....	27
1. The Variational Principle.....	27
2. Strongly Continuous Functions on $L^p$ -spaces.....	38
3. Smooth Optimization in $L^2$ .....	50
4. Weak Topologies.....	64
5. Existence Theory for the Calculus of Variations.....	79
Chapter III - Duality Theory.....	96
1. Convex Analysis.....	96
2. Subdifferentiability.....	110
3. Necessary Conditions and Duality Theory.....	124
4. Non-convex Duality Theory.....	136
5. Applications of Duality to the Calculus of Variations.....	143
6. Relaxation Theory.....	153
Notes.....	163
References.....	165
