List of participants xx

Chapter 1. Banach spaces (ed. by S. Kisliakov) 1

1.1 *V. Milman.* Proportional quotients of finite dimensional normed spaces 3
1.2 *J. Bourgain.* Structure of the space of uniformly convergent Fourier series 6
1.3 *P. Wojtaszczyk.* Bases in H^p spaces on the ball 8
1.4 *P. Müller, T. Wolniewicz.* Isomorphisms between H^1 spaces 10
1.5 *E. Semënov.* Spaces of Hardy type 12
1.6 *P. Jones.* Spaces with the approximation property? 14
1.7 *S. Saitoh.* Bergman – Selberg spaces on sectors 15
1.8 *Yu. Lyubarskii.* Spaces of analytic functions generated by a measure 18
1.9 *A. Pełczyński.* Compactness of absolutely summing operators 19
1.10 *I. Komarchev, B. Makarov.* When is $\Pi_2(X, \ell^2) = L(X, \ell^2)$? 21
1.11 *B. Makarov.* Stably regular operators. Lattices of operators 27
1.12 *E. Semënov.* Operator blocks in Banach lattices 30
1.13 *E. Semënov.* Orlicz property 32
1.14 *M. Wodzicki.* Homological dimensions of Banach spaces 34
1.15 *V. Zakharyuta, O. Semiguk, N. Skiba.* Isomorphisms and bases 36
1.16 *V. Zakharyuta.* On isomorphic classification of F-spaces 40
1.17 *F. Haslinger.* Weighted spaces of entire functions 43
1.18 *L. Aizenberg.* Functionals on analytic functions and linear convexity 45
1.19 *V. Trutnev.* Uniqueness of the support of an analytical functional 49

Chapter 2. Banach algebras (ed. by H. Dales and A. Helemskii) 51

2.1 *A. Helemskii.* 31 problems on the homology of the algebras of analysis 54
2.2 *Z. Lykova.* The homology of C^*-algebras 79
2.3 *P. Curtis, Jr.* Amenable commutative Banach algebras 83
2.4 *M. Wodzicki.* Ideals in Banach algebras 85
2.5 *G. Willis.* Factorization in Banach algebras 87
2.6 *H. Dales.* Homomorphisms from C^*-algebras 90
2.7 *H. Dales.* Discontinuous homomorphisms from algebras 92
2.8 *W. Bade.* Continuity of derivations of radical convolution algebras 95
2.9 *E. Gorin, A. Kitover.* Spectrum of an endomorphism 98
2.10 *J. Zemánek.* One-sided spectral calculus 102

2.11 *W. Żelazko.* Four problems concerning joint spectra 105
2.12 *E. Gorin.* Algebraic equations in Banach algebras 107
2.13 *V. Shul'man.* Generalized derivations and semidiagonality 111
2.14 *T. Gamelin.* Problems pertaining to H^∞ 113
2.15 *J. Wermer.* Finitely generated Banach algebras 116
2.16 *D. Sarason.* Sets of antisymmetry and support sets for $H^\infty + C$ 117
2.17 *P. Gorkin.* Antisymmetric sets and Gleason parts 119
2.18 *D. Voiculescu.* Filtrations of C^*-algebras 122
2.19 *R. Rochberg.* A question involving analytic families of operators 123
2.20 *N. Krupnik, A. Markus, I. Fel'dman.* Operator algebras in which all Fredholm operators are invertible 124
2.21 *S. Igari.* Cohen – Rudin characterization of homomorphisms 126
2.22 *G. Brown, W. Moran.* Gelfand space of $L^1(\mathbb{R})$ multipliers 128
2.23 *W. Żelazko.* Two problems concerning separation of ideals 131
2.24 *O. Ivanov.* Analytic algebras and compactifications of the disk 132
2.25 *M. Samokhin.* H^∞ on an infinitely connected domain 134
2.26 *R. Mortini.* Gleason parts and prime ideals in H^∞ 136
2.27 *V. Tolokonnikov.* Banach algebras of analytic functions 139
2.28 *V. Pták.* Extremum problems 145
2.29 *N. Young.* Maximum principles for quotient norms in H^∞ 147
2.30 *J. Zemánek.* Open semigroups in Banach algebras 149
2.31 *L. de Branges.* Polynomial approximation 151
2.32 *J. Wermer.* Subalgebras of the disk algebra 152
S.2.33 *B. Bollobás.* Diminishing of spectrum under an extension 154

Chapter 3. Probabilistic problems (ed. by J.-P. Kahane) 155

3.1 *H. McKean.* Some questions about Hardy functions 157
3.2 *I. Ibragimov, V. Solev.* Analytical problems on stationary processes 159
3.3 *S. Hruščëv, V. Peller.* Hankel operators, past and future 162
3.4 *V. Gaposhkin.* Strong law of large numbers 167
3.5 *A. Vershik.* Markov processes and contractions 170
3.6 *V. Sudakov.* Measures with given projections 172
3.7 *J. Anderson.* Random power series 174
3.8 *Y. Guivarc'h.* Random matrices and transfer operators 175
3.9 *J.-P. Kahane.* A kind of covering problem 178

Chapter 4. Holomorphic operator functions (ed. by I. Gohberg and M. Kaashoek) 179

4.1 *N. Young.* Spectral and scalar interpolations 180
4.2 *V. Adamyan, D. Arov, M. Krein.* Function theoretic problems connected with spectral measures of isometric operators 183
4.3 *D. Arov.* Three problems about J-inner matrix-functions 186
4.4 *Yu. Ginzburg.* Extremal multiplicative representations 190
4.5 *L. Faddeev, N. Reshetihin.* Infinite product of special matrices 192
4.6 *J. Leiterer.* Holomorphic Hilbert space bundles 194

4.7 *D. Arov, B. Fritzsche, B. Kirstein.* Inverse problem for j_{pq}-functions 197
4.8 *A. Dijksma, H. Langer, H. de Snoo.* Poles of matrix functions 201
4.9 *I. Gohberg, M. Kaashoek, L. Rodman.* Local and global equivalence 205
4.10 *M. Putinar.* Liftings of vector-valued analytic functions 207
S.4.11 *B. Szőkefalvi-Nagy.* Operator valued bounded analytic functions 208

Chapter 5. General operator theory (ed. by P. Rosenthal) 211

5.1 *J. Holbrook.* Perturbation of eigenvalues for normal operators 214
5.2 *H. Radjavi.* Reducibility of semigroups of operators 217
5.3 *K. Davidson.* Compact operators and masas 219
5.4 *A. Atzmon.* Differentiation and translation invariant subspaces 220
5.5 *L. Rodman, I. Spitkovsky.* Spectrum assignment problems 223
5.6 *D. Herrero.* What is a finite operator? 226
5.7 *P. Y. Wu.* Multiplicative commutator and product of involutions 229
5.8 *D. Yakubovich.* Invariant subspaces on a Riemann surface 231
5.9 *T. Azizov, I. Iohvidov.* Maximal non-negative invariant subspaces 234
5.10 *A. Vershik.* Are multiplication and shift uniformly approximable? 236
5.11 *D. Clark.* A problem on extremal similarities 242
5.12 *V. Peller.* Estimates of operator polynomials on $\mathfrak{S}_p$ 244
5.13 *A. Kitover.* 2×2 Matsaev's conjecture 247
5.14 *I. Fel'dman, A. Markus.* Operator matrix and its determinant 248
5.15 *M. Birman, M. Solomyak.* Operators with power-like singular numbers .. 250
5.16 *M. Solomyak.* Two problems about the operators $b(X)a(\mathcal{D})$ 252
5.17 *B. Simon.* Boundedness of continuum eigenfunctions 254
S.5.18 *Ch. Davis.* Perturbation of spectrum of normal operators 257
S.5.19 *Yu. Lyubich.* Composition of integration and substitution 258

Chapter 6. Perturbation theory. Scattering theory (ed. by M. Birman) 259

6.1 *L. de Branges.* Perturbation theory and invariant subspaces 261
6.2 *D. Voiculescu.* Quasidiagonality and the Macaev ideal 263
6.3 *H. McKean.* Polynomial approximation and Hill's equation 264
6.4 *H. Widom.* When are differentiable functions differentiable? 266
6.5 *M. Birman.* Spectral shift function and double operator integrals 272
6.6 *M. Birman.* Re-expansion operators as objects of spectral analysis 274
6.7 *M. Ben-Artzi, A. Devinatz.* Convergence for evolution equations 278
6.8 *M. Ben-Artzi, A. Devinatz.* Energy estimates for limiting resolvents 280
6.9 *L. Sakhnovich.* Scattering theory for Coulomb type problems 282
6.10 *D. Yafaev.* Trace-class and smooth approaches in scattering theory 286
S.6.11 *L. Faddeev, B. Pavlov.* Zero sets of operator functions 289
S.6.12 *N. Makarov.* Point spectrum of perturbations of unitary operators 292

Chapter 7. Hankel and Toeplitz operator (ed. by J. Peetre) 293

7.1 *S. Power.* Quasinilpotent Hankel operators 296
7.2 *V. Peller.* Estimates of operators and similarity to a contraction 298
7.3 *S. Janson.* Singular values of Hankel operators 303

7.4 *R. Rochberg.* Three questions about Hankel operators 306
7.5 *K. Zhu.* Hankel operators on the Bergman space 309
7.6 *Q. Fan, L. Peng.* Hankel-type operators: boundedness and compactness . 312
7.7 *V. Peller.* Iterates of Toeplitz operators with unimodular symbols 314
7.8 *R. Douglas.* Localization of Toeplitz operators 316
7.9 *D. Sarason.* Products of Toeplitz operators 318
7.10 *C. Sundberg.* Toeplitz operators on the Bergman space 320
7.11 *N. Krupnik, I. Verbitskiĭ.* Toeplitz operators on Hardy spaces 321
7.12 *Yu. Karlovich, I. Spitkovskiĭ.* Factorization of almost periodic matrices . . 323
7.13 *L. Sakhnovich.* Factorization of operators on $L^2(a,b)$ 326
7.14 *L. Coburn.* Toeplitz operators in several variables 330
7.15 *J. Janas.* Toeplitz operators in Bargmann spaces 331
7.16 *M. Kreĭn, I. Spitkovskiĭ.* On Szegö limit theorems 333
7.17 *V. Vladimirov, I. Volovich.* Moment problems and statistical physics 336
7.18 *A. Böttcher, B. Silbermann.* On Axler-Chang-Sarason-Volberg theorem . 340
7.19 *S. Prössdorf.* Starke Elliptizität singulärer Integraloperatoren 342
7.20 *Yu. Latushkin, G. Litvinchuk.* How to calculate the defect numbers 346
7.21 *M. Semënov-Tyan-Shanskiĭ.* Poincaré – Bertrand operators 349
S.7.22 *S. Axler.* Hankel operators on Bergman spaces 351
S.7.23 *B. Silbermann.* Banach algebra approach to the reduction method 354

Chapter 8. Operators close to normals (ed. by J. Conway) 359

8.1 *P. McGuire.* Spectral pictures of irreducible subnormal operators 362
8.2 *R. Olin.* Multiplicity theory for subnormal operators 364
8.3 *C. Putnam.* Real parts of subnormal operators and their duals 366
8.4 *D. Xia.* Complete unitary invariant for some subnormal operators 368
8.5 *M. Putinar.* Analytically hyponormal weighted shifts 370
8.6 *M. Putinar.* Algebraic operators with rank-one self-commutators 372
8.7 *J. Conway.* On the fundamental problem for spectral sets 373
8.8 *D. Voiculescu.* Almost-normal operators modulo $\mathfrak{S}_p$ 378
8.9 *C. Putnam.* Hyponormal operators and spectral absolute continuity 381
8.10 *C. Putnam.* Operators, analytic negligibility, and capacities 383
8.11 *N. Makarov, N. Nikolski.* Perturbation of continuous spectrum 386

Chapter 9. Functional model (ed. by N. Nikolski and V. Vasyunin) 389

9.1 *N. Nikolski.* Operators and approximation 391
9.2 *S. Naboko.* Similarity problem and the singular spectrum 394
9.3 *V. Kapustin.* Two problems about commutants 399
9.4 *L. Kérchy.* Quasi-similarity invariance of reflexivity 401
S.9.5 *N. Nikolski, B. Pavlov, V. Vasyunin.* Spectral decompositions and the Carleson condition 405
S.9.6 *R. Teodorescu, V. Vasyunin.* Invariant subspaces of C_{10}-contractions 408

Chapter 10. Singular integrals, BMO, H^p
(ed. by E. Dyn'kin and S. Kisliakov) 409

10.1 *G. Tumarkin.* Classes of domains and Cauchy type integrals 411
10.2 *P. Jones.* Bilinear singular integrals and maximal functions 414
10.3 *J. Král.* Limits of integrals of the Cauchy type 415
10.4 *J. Krzyż.* Chord arc curves and Neumann – Poincaré operator C_1^Γ 418
10.5 *B. Muckenhoupt.* Weighted norm inequalities 419
10.6 *I. Verbitsky, N. Krupnik.* The norm of the Riesz projection 422
10.7 *S. Semmes.* Is this operator invertible? 424
10.8 *R. Rochberg.* BMO norm in terms of an operator norm 426
10.9 *P. Jones.* Equivalent norms in H^p 427
10.10 *A. Aleksandrov, P. Kargaev.* The Hardy spaces $H^p(\mathbb{R}^d)$ and approximation in $L^p(\mathbb{R}^d)$ for $p < 1$ 428
10.11 *P. Müller.* Permutation of the Haar system 432
10.12 *S. Kisliakov.* Weak type substitute for Riesz projections on tori 434
10.13 *P. Sjögren.* Extension of operators bounded in the weak L^1 436
10.14 *J. Garnett.* Some open problems concerning H^∞ and BMO 438
10.15 *A. Baernstein.* Two conjectures by Albert Baernstein 440
10.16 *D. Sarason.* Blaschke products in $\mathcal{B}_0$ 443
10.17 *S.-Yu. Chang.* Analytic functions with finite Dirichlet integral 446
10.18 *S.-Yu. Chang.* Subalgebras of $L^\infty(\mathbb{T}^2)$ containing $H^\infty(\mathbb{T}^2)$ 447
10.19 *P. Ahern.* Inner functions with derivative in H^p, $0 < p < 1$ 448
10.20 *M. Hasumi.* Hardy classes and Riemann surfaces 450
10.21 *P. Casazza.* Interpolating Blaschke products 452
10.22 *F. Forelli.* Quasi-proper maps of 2-sheeted coverings of the disc 454
10.23 *K. Dyakonov.* Smooth functions and inner factors 457
S.10.24 *J. Anderson.* Algebras contained within H^∞ 461
S.10.25 *A. Aleksandrov, V. Havin.* On the definition of $H^p(\mathbb{R}^n)$ 464

Chapter 11. Spectral analysis and synthesis (ed. by N. Nikolski) 1

11.1 *L. Waelbroeck.* About holomorphic functions with limited growth 4
11.2 *V. Palamodov.* $\bar\partial$-equation and localization of submodules 7
11.3 *V. Trutnev.* Invariant subspaces and the differential equations 10

11.4 *I. Krasichkov-Ternovskiĭ.* Local description of closed submodules 12
11.5 *V. Tkachenko.* Spectral synthesis for differential operators 16
11.6 *I. Krasichkov-Ternovskiĭ.* Spectral synthesis for a differential operator 18
11.7 *R. Meise, S. Momm.* Structure of kernels of convolution operators 20
11.8 *C. Berenstein, D. Struppa.* Interpolating varieties and complex analysis .. 22
11.9 *C. Berenstein, A. Yger.* Some problems about ideals 26
11.10 *T. Wolff.* A refinement of the corona theorem 28
11.11 *N. Nikolski.* Two problems on the spectral synthesis 30
11.12 *R. Frankfurt.* Weak invertibility and factorization 33
11.13 *B. Korenblum.* Weakly invertible elements in Bergman spaces 36
11.14 *A. Shields.* Cyclic vectors in spaces of analytic functions 38
11.15 *A. Aleksandrov.* Invariant subspaces of the backward shift 41
11.16 *V. Gurarii.* Completeness of translates in a weighted space 44
11.17 *Y. Domar.* A closure problem for functions on $\mathbb{R}_+$ 48
11.18 *V. Gurarii.* Two problems of harmonic analysis in weighted spaces 51
11.19 *E. Dyn'kin.* Harmonic synthesis and compositions 53
11.20 *J.-P. Kahane.* Deux problèmes sur les séries trigonométriques 55
11.21 *M. Thomas.* Algebra and ideal generation 57
11.22 *B. Levin.* Translates of functions of two variables 60
11.23 *H. Helson.* Titchmarsh's theorem for vector functions 62
11.24 *F. Shamoyan.* Invariant subspaces of the shift operator 64
11.25 *D. Williams.* Blaschke products and ideals in C_A^∞ 66
11.26 *J. Bruna.* Closed ideals in the analytic Gevrey class 69
S.11.27 *F. Forelli.* Divisibility problem in $A(\mathbb{D})$ and $H^\infty(\mathbb{D})$ 70

Chapter 12. Approximations and capacities
(ed. by J. Brennan, A. Volberg, and V. Havin) 73

12.1 *N. Tarkhanov.* Approximation by solutions of elliptic equations 76
12.2 *P. Jones.* Approximation by smooth functions in Sobolev spaces 79
12.3 *T. Kriete.* Splitting in H^2-spaces 80
12.4 *H. Dym.* Trigonometric approximation in $L^2(\mathbb{R}, d\Delta)$ 87
12.5 *Ch. Berg, H. Pedersen.* Nevanlinna extremal measures 89
12.6 *A. Stray.* Decomposition of approximable functions 92
12.7 *V. Belyi.* Approximation and quasiconformal continuation 94
12.8 *A. Boivin, P. Gauthier.* Tangential approximation 96
12.9 *J. Brennan.* Integrability of the derivative of a conformal mapping 101
12.10 *J. Brennan.* Weighted polynomial approximation 107
12.11 *F. Perez-Gonzalez.* Simultaneous approximation in L^p-norms 112
12.12 *H. Hedenmalm.* A polynomial approximation problem 114
12.13 *H. Hedenmalm.* An elasticity problem 115
12.14 *T. Bagby.* Approximation in the mean by harmonic functions 117
12.15 *A. O'Farrell.* Uniform approximation by harmonic functions 121
12.16 *J. Verdera.* A uniform approximation problem 122
12.17 *A. Gonchar.* Rational approximation of analytic functions 124
12.18 *H. Wallin.* Padé approximation in several variables 127
12.19 *L. Rubel.* Badly-approximable functions 131

12.20 *D. Khavinson.* An isoperimetric problem 133
12.21 *T. Ransford.* A lower bound for logarithmic capacity 136
12.22 *G. Henkin.* Exotic Jordan arcs in $\mathbb{C}^N$ 139
12.23 *D. Marshall.* Removable sets for bounded analytic functions 141
12.24 *W. Hayman.* On Painlevé null sets 145
12.25 *M. Mel'nikov, A. Vitushkin.* Analytic capacity, rational approximation .. 148
12.26 *L. Ivanov.* On sets of analytic capacity zero 150
12.27 *J. Král.* Estimates of analytic capacity 154
12.28 *T. Murai.* Analytic capacity and the Szegö kernel function 158
12.29 *J. Zemánek.* On the variation of analytic capacity 161
12.30 *V. Maz'ya.* Regularität für elliptische Gleichungen 163
12.31 *D. Adams.* Exceptional sets for Besov spaces 169
12.32 *P. Jones.* Complex interpolation between Sobolev spaces 173
S.12.33 *L. Hedberg.* Spectral synthesis in Sobolev spaces 174

Chapter 13. Orthogonal polynomials (ed. by P. Nevai) 177

13.1 *M. Eiermann, H. Stahl.* Zeros of orthogonal polynomials on N-gons 187
13.2 *A. Iserles, L. Littlejohn.* Polynomials orthogonal in a Sobolev space 190
13.3 *D. Lubinsky.* Rational versus polynomial approximation 194
13.4 *A. Magnus.* Refined asymptotics for Freud's recurrence coefficients 196
13.5 *V. Totik.* Fast decreasing polynomials and external fields 201
13.6 *W. van Assche.* Freud's conjecture for orthogonal polynomials 203

Chapter 14. Uniqueness, moments, normality
(ed. by J. Brennan, A. Volberg, and V. Havin) 207

14.1 *M. Djrbashyan.* Representations of analytic functions 209
14.2 *T. Kriete, B. MacCluer.* Kernel functions, moments, compositions 213
14.3 *V. Havin, S. Hruščëv.* Uniqueness and finite Dirichlet integral 216
14.4 *V. Havin, B. Jöricke, N. Makarov.* Stationary functions, uncertainty principle for convolutions and Jordan operators 219
14.5 *P. Koosis.* Problem in the theory of functions 223
14.6 *E. Dyn'kin.* Peak sets for Lipschitz classes 225
14.7 *R. Kaufman.* A problem by R. Kaufman 228
14.8 *V. Matsaev.* Quasi-analyticity and differential operators 229
14.9 *J. Ecalle.* Two problems involving quasianalytic functions 232
14.10 *L. de Branges.* Local operators on Fourier transforms 235
14.11 *J. Siddiqi.* Density of exponentials on plane arcs 237
14.12 *S. Hruščëv.* An alternative for analytic Carleman classes 239
14.13 *V. Napalkov.* On a uniqueness theorem in $\mathbb{C}^n$ 241
14.14 *G. Grimmett.* How few cumulants specify a distribution? 242
14.15 *J. Manfredi, E. Villamor.* Boundary values of quasiregular mappings 245
14.16 *J. Lewis.* Paths for subharmonic functions 247
14.17 *J. Lewis.* When is a pseudosphere a quasisphere? 250
14.18 *T. Wolff.* Unique continuation with L^p lower order terms 251
S.14.19 *A. Volberg.* When is $\int_{\mathbb{T}} \log|f| dm > -\infty$? 253
S.14.20 *A. Devinatz.* Moment problem questions 257

Chapter 15. Interpolation, bases, multipliers (ed. by N. Nikolski) 259

15.1 *B. Taylor.* Necessary conditions for interpolation by entire functions 263
15.2 *A. Leontiev.* Representations of functions by exponential series 265
15.3 *N. Nikolski.* Bases of reproducing kernels and exponentials 268
15.4 *G. Gubreev.* Unconditional bases generated by Muckenhoupt weights 271
15.5 *J. Bruna.* Free interpolation in regular classes 273
15.6 *N. Shirokov.* Traces of $H^\infty(\mathbb{B}^N)$-functions on hyperplanes 275
15.7 *J. Bruna.* Traces of pluriharmonic functions on curves 277
15.8 *Yu. Brudny, P. Shwartsman.* Traces of differentiable functions 279
15.9 *S. Vinogradov.* Multiplicative properties of ℓ^p_A 283
15.10 *M. Zafran.* Multipliers, interpolation, and $\Lambda(p)$ sets 286
15.11 *M. Krein.* Banach algebras and almost periodicity 288
15.12 *I. Ovcharenko.* Positive definite kernels of two variables 291
15.13 *L. Sakhnovich.* On nonextendable Hermitian-positive functions 293

Chapter 16. Entire and subharmonic functions
(ed. by A. Goldberg, B. Levin, and I. Ostrovskii) 295

16.1 *B. Levin.* Entire functions of Laguerre – Polya class 298
16.2 *A. Goldberg, I. Ostrovskii.* Functions of completely regular growth 300
16.3 *I. Ostrovskii.* Operators preserving the completely regular growth 301
16.4 *I. Ostrovskii, M. Sodin.* Phragmen – Lindelöf indicators 303
16.5 *I. Ostrovskii, M. Sodin.* Estimates of indicators from below 304
16.6 *A. Goldberg, I. Ostrovskii.* Phragmen – Lindelöf principle 306
16.7 *A. Goldberg, I. Ostrovskii.* Arguments of zeros and lacunarity 308
16.8 *V. Azarin, A. Eremenko, A. Grishin.* Cluster sets 310
16.9 *V. Azarin.* Minimal subharmonic function 313
16.10 *M. Sodin.* Subharmonic functions and logarithms of moduli 315
16.11 *M. Kadec.* On inverse problem of best approximation 316
16.12 *J. Langley, L. Rubel.* Derivatives of unbounded analytic functions 317
16.13 *G. Belitskii, V. Tkachenko.* Global solvability of a difference equation 321
16.14 *S. Havinson.* A problem on exact majorants 322
16.15 *A. Eremenko, B. Fuglede, M. Sodin.* Harmonic measure of three-sets 323
16.16 *W. Hayman.* A uniqueness problem for polyharmonic functions 326
16.17 *J. Král.* Some extension problems 328
16.18 *R. Kaufman.* Partition of singularities of analytic functions 330
S.16.19 *A. Goldberg, A. Eremenko.* Exceptional values of various kinds 331
S.16.20 *A. Goldberg, A. Eremenko, I. Ostrovskii.* Valiron exceptional values 333
S.16.21 *B. Levin, I. Ostrovskii.* Zero-sets of sine-type functions 335
S.16.22 *B. Levin.* An extremal problem for subharmonic functions 337

Chapter 17. $\mathbb{C}^n$ (ed. by L. Aizenberg) 339

17.1 *G. Henkin, R. Novikov.* Proper mappings of classical domains 341
17.2 *L. Rubel.* Holomorphic endomorphisms of regions in $\mathbb{C}^n$ 344
17.3 *M. Jarnicki, P. Pflug.* The Carathéodory topology 346
17.4 *L. Aizenberg.* Holomorphic extension from a part of the boundary 347

17.5 *Yu. Khurumov.* Mappings between CR manifolds 350
17.6 *B. Jöricke.* Polynomial convexity of totally real discs 353
17.7 *A. Sergeev.* $\bar{\partial}$ in the future tube 356
17.8 *A. Sergeev.* Around the extended future tube conjecture 360
17.9 *L. Ronkin.* Jessen function of holomorphic almost periodic function 363
17.10 *S. Znamenskiĭ.* $\mathbb{C}$-convex sets 366
17.11 *H. Hedenmalm.* Outer functions in the ball algebra 368
17.12 *H. Alexander.* Polynomially convex hulls 369
17.13 *F. Forelli.* The extreme rays of the positive pluriharmonic functions 371
17.14 *S. Krushkal.* On biholomorphy of holomorphic mappings 373
17.15 *C. Berenstein, R. Gay, A. Yger.* Residue currents and Mellin transform . 375
17.16 *C. Berenstein, R. Gay, A. Yger.* About Pompeïu's problem 378
17.17 *R. Gay, A. Méril, A. Yger.* About E. Fischer's problem 380
17.18 *J. Esterle.* Iteration of holomorphic mappings on $\mathbb{C}^n$ 382

Chapter 18. Geometric function theory (ed. by P. Duren) 383

18.1 *C. Bishop.* Harmonic measure and Hausdorff dimension 385
18.2 *B. Korenblum.* Majorization and domination in the Bergman space 388
18.3 *K. Zhu.* Schatten class composition operator on the Bergman space 390
18.4 *S. Saitoh.* On an interpolation problem for $|dz|$ periods 392
18.5 *A. Goodman.* Coefficient problems in geometric function theory 394
18.6 *J. Krzyż.* Quasi-symmetric starlike functions 396
18.7 *A. Grinshpan.* Advanced coefficient problems for univalent functions 397
18.8 *J. Rovnyak.* Extension problem for coefficients of Riemann mappings 401
18.9 *V. Belyĭ.* Moduli of smoothness of Riemann mapping functions 403
18.10 *A. Baernstein II.* Landau's constant and extremal problems 404
18.11 *P. Duren.* Harmonic mappings in the plane 408
18.12 *K. Stephenson.* Circle packings and discrete analytic functions 410
18.13 *I. Milin.* A conjecture on logarithmic coefficients of univalent function ... 414
18.14 *J. Heinonen, J.-M. Wu.* Quasicircles, A_∞, and harmonic measure 416
18.15 *P. Duren.* Support points of univalent functions 420
18.16 *A. Baernstein II.* More problems by Albert Baernstein 422

Chapter 19. Holomorphic dynamics (ed. by B. Bielefeld and M. Lyubich) 423

19.1 *B. Bielefeld.* Questions in quasiconformal surgery 425
19.2 *C. McMullen.* Rational maps and Teichmüller space 430
19.3 *J. Milnor.* Thurston's algorithm without critical finiteness 434
19.4 *M. Rees.* A possible approach to a complex renormalization problem 437
19.5 *L. Carleson.* Geometry of Julia sets 441
19.6 *J. Milnor.* Problems on local connectivity 443
19.7 *M. Lyubich.* Measure and dimension of Julia Sets 447
19.8 *F. Przytycki.* Invariant measures for iterations of holomorphic maps 450
19.9 *R. Devaney.* Open questions in non-rational complex dynamics 455
19.10 *A. Eremenko, M. Lyubich.* Wandering domains for holomorphic maps ... 458
19.11 *S. Sutherland.* Bad polynomials for Newton's method 460

Chapter 20. Miscellaneous problems 463

20.1 *S. Shishkin, V. Yakubovich.* Convexity of the joint numerical range 464
20.2 *S. Krein, G. Kurina.* Duality theorem for an optimization problem 467
20.3 *T. Azizov.* Simple p-cyclic Pontrjagin space selfadjoint operators 468
20.4 *E. Gorin.* Norms and extremals of convolution operators 469
20.5 *V. Lin.* Holomorphic mappings and algebraic functions 475
20.6 *V. Lin, M. Zaidenberg.* Singular points of a plane algebraic curve 479
20.7 *A. Gulisashvili.* Rearrangement-invariant hulls of sets 480
