Chapter I. The Basis Problem. Some Properties of Bases in Banach Spaces

§ 1. Definition of a basis in a Banach space. The basis problem. Relations between bases in complex and real Banach spaces	1
§ 2. Some examples of bases in concrete Banach spaces. Some separable Banach spaces in which no basis is known	10
§ 3. The coefficient functionals associated to a basis. Bounded bases. Normalized bases	17
§ 4. Biorthogonal systems. The partial sum operators. Some characterizations of regular biorthogonal systems. Applications	23
§ 5. Some characterizations of regular E -complete biorthogonal systems. Multipliers	31
§ 6. Some types of linear independence of sequences	50
§ 7. Intrinsic characterizations of bases. The norm and the index of a sequence. The index of a Banach space. Extension of block basic sequences	57
§ 8. Domination and equivalence of sequences. Equivalent, affinely equivalent and permutatively equivalent bases	68
§ 9. Stability theorems of Paley-Wiener type	84
§ 10. Other stability theorems	93
§ 11. An application to the basis problem	109
§ 12. Properties of strong duality. Application: bases and sequence spaces	112
§ 13. Bases in topological linear spaces. Weak bases and bounded weak bases in Banach spaces. Weak* bases and bounded weak* bases in conjugate Banach spaces	144
§ 14. Schauder bases in topological linear spaces. Properties of weak duality for bases in Banach spaces	151
§ 15. (e)-Schauder bases and (b)-Schauder bases in topological linear spaces	158
§ 16. Some remarks on bases in normed linear spaces	160
§ 17. Continuous linear operators in Banach spaces with bases	162
§ 18. Bases of tensor products	171
§ 19. Best approximation in Banach spaces with bases	174
§ 20. Polynomial bases. Strict polynomial bases. Γ systems and Λ systems	184
Notes and remarks	200

Chapter II. Special Classes of Bases in Banach Spaces

I. Classes of Bases not Involving Unconditional Convergence

§ 1. Monotone and strictly monotone bases	214
§ 2. Normal bases	252
§ 3. Positive bases	261

§ 4. <i>k</i> -shrinking bases	267
§ 5. Retro-bases in conjugate Banach spaces	279
§ 6. <i>k</i> -boundedly complete bases	284
§ 7. Bases of types $w c_0$, $(w c_0)^*$, $sw c_0$ and $(sw c_0)^*$	292
§ 8. Some properties of the set of all elements of a basis. Weakly closed and (weakly closed)* bases	300
§ 9. Bases of types P , P^* , aP and aP^*	308
§ 10. Bases of types l_+ , $(l_+)^*$, al_+ and $(al_+)^*$. The cone associated to a basis	315
§ 11. Besselian and Hilbertian bases. Stability theorems	337
§ 12. Relations between various types of bases	359
§ 13. Universal bases. Complementably universal bases. Block-universal bases	373
 II. Unconditional Bases and Some Classes of Unconditional Bases	
§ 14. Unconditional bases. Conditional bases	396
§ 15. Some separable Banach spaces having no unconditional basis	432
§ 16. Some characterizations of unconditional bases among E -complete (or total) biorthogonal systems and among bases. Some characterizations by properties of the associated cone. Multipliers	458
§ 17. Intrinsic characterizations of unconditional bases. Some more separable Banach spaces having no unconditional basis. Properties of strong duality. Unconditional bases and sequence spaces	499
§ 18. Equivalence and permutative equivalence of unconditional bases. Universal unconditional bases	529
§ 19. Best approximation in Banach spaces with unconditional bases	550
§ 20. Orthogonal bases. Strictly orthogonal bases. Hyperorthogonal and strictly hyperorthogonal bases	555
§ 21. Subsymmetric bases	563
§ 22. Symmetric bases. Symmetric spaces	574
§ 23. Applications: Existence of non-equivalent normalized bases and conditional bases in infinite dimensional Banach spaces with bases	602
§ 24. Perfectly homogeneous bases. Application: Banach spaces with a unique normalized unconditional basis	609
§ 25. Absolutely convergent bases. Uniform bases	621
Notes and remarks	622
Bibliography	646
Notation Index	659
Author Index	662
Subject Index	665

Volume II (in preparation):

Chapter III. Generalizations of the Notion of a Basis

Chapter IV. Applications to the Study of the Structure of Banach Spaces

Chapter V. Some Properties of Bases in Concrete Banach Spaces

Appendix I. Bases in General (not Necessarily Separable) Banach Spaces

Appendix II. Bases in Topological Linear Spaces
