Preface

CHAPTERS

1. Normed Linear Spaces: Banach Spaces and Hilbert Spaces

1.1	Normed linear spaces	1
1.2	Examples of Banach spaces	3
1.3	Topology in normed linear spaces	9
1.4	Separable normed linear spaces	12
1.5	Compact sets: the Heine–Borel theorem	13
1.6	Baire’s category theorem	15
1.7	Continuous mappings between normed linear spaces	16
1.8	Banach’s fixed point theorem	22
1.9	Linear transformations in normed linear spaces	23
1.10	Extensions of linear mappings: the Hanh–Banach theorem	29
1.11	Adjoint mappings	33
1.12	Banach algebras	37
1.13	Inner product spaces and Hilbert spaces	44
1.14	Exercises to Chapter 1	58

2. The Lebesgue Integral

2.1	Measures and measure spaces	69
2.2	Properties of outer measures, and the Lebesgue measure	71
2.3	Limit theorems for measures and outer measures	77
2.4	Measurable functions	79
2.5	Simple functions	84
2.6	Convergence theorems	86
2.7	The Lebesgue integral of simple functions	88
2.8	The Lebesgue integral of a bounded measurable function	90
2.9	The Riemann and Lebesgue integrals on R^1	98
2.10	The bounded convergence theorem	100
2.11	Integrable functions	102
2.12	Distribution functions	104

2.13	Convergence theorems	106
2.14	Product spaces, product measures: Fubini's theorem	109
2.15	Radon–Nikodym theorem: change of variables, derivatives	115
2.16	Derivatives and integrals on the real line	125
2.17	Appendix to Chapter 2: change of variables in integrals over R^n	133
2.18	Exercises to Chapter 2	138
3. L^p Spaces		
3.1	Introduction	152
3.2	Hölder's inequality	153
3.3	Minkowski's inequality and Jensen's inequality	157
3.4	Completeness of $L^p(X, \mathcal{X}, m)$, $p \geq 1$: trigonometric series	161
3.5	Approximations in $L^p(X)$	163
3.6	Continuity of norm in $L^p(R^n)$	168
3.7	Representation of linear functionals in $L^p(X)$: the adjoint operator	170
3.8	Isometries in $L^p(X)$	173
3.9	The pointwise convergence of classes of bounded operators on $L^p(R^n)$	179
3.10	Exercises to Chapter 3	182
4. Inequalities for Integral Operators		
4.1	A general inequality: Young's inequality for convolutions	190
4.2	Inequalities for homogeneous kernels	193
4.3	Convolutions and approximations to the identity	197
4.4	Operator approximations	203
4.5	Special integral operators	205
4.6	Exercises to Chapter 4	217
5. Special Techniques: Interpolation Theorems and Rearrangements		
5.1	The Riesz–Thorin convexity theorem and extensions	230
5.2	Distributions functions and the Marcinkiewicz–Zygmund interpolation theorem	234
5.3	An extension of Young's inequality for generalized convolution	245
5.4	Non-increasing rearrangements	248
5.5	Lorentz spaces	254
5.6	Further results involving convolutions	258
5.7	Maximal functions	264
5.8	Weighted norms for operators mapping into L^∞	272
5.9	Exercises to Chapter 5	274

6. Fourier Transforms and Related Integral Operators	
6.1 Fourier transforms of functions in $L^1(\mathbb{R}^n)$	292
6.2 Some special theorems: special functions and radial functions	296
6.3 Fourier transforms of functions in $L^2(\mathbb{R}^n)$	304
6.4 Fourier transforms in $L^p(\mathbb{R}^n)$, $1 \leq p \leq 2$	310
6.5 Fourier transforms with weight functions	313
6.6 Fourier transforms, fractional integrals and Bessel potentials	330
6.7 Operators with Fourier-type kernels: generalized transforms	334
6.8 Laplace transforms and Mellin transforms	344
6.9 Exercises to Chapter 6	348
7. The Hilbert Transform and Singular Integrals	
7.1 Introduction to the Hilbert transform	361
7.2 The Hilbert transform in $L^2(\mathbb{R})$	365
7.3 Hilbert transforms and conjugate functions in $L^p(\mathbb{R})$	371
7.4 Fourier transform multipliers: Dirichlet projections	386
7.5 Estimates for singular integrals: An estimate for differentiable multipliers	400
7.6 Maximal functions for convolution operators	422
7.7 Exercises to Chapter 7	429
8. Special Topics: Equivalent Functional Relations; Vector-valued Functions; Semi-groups of Operators	
8.1 Introduction	437
8.2 Equivalent functional relations: translation invariant operators	437
8.3 Vector-valued functions on measure spaces	444
8.4 Estimates for vector-valued singular integrals	455
8.5 Mixed-norm estimates for singular integrals	457
8.6 Semi-groups of operators	467
8.7 Examples of special semi-groups of operators on $L^p(\mathbb{R}^n)$	483
8.8 Remarks on semi-group potential theory	487
8.9 Exercises to Chapter 8	488
Notation not defined in Text	502
Bibliography and References	504
Author Index	511
Subject Index	514
