

CONTENTS

1. ELEMENTARY CONCEPTS CONCERNING TOPOLOGICAL AND VECTOR SPACES	1
1. Definition of a topological space	1
2. Bases and sub-bases of a neighbourhood system	2
3. Metric spaces	3
4. Filters and compact sets	4
5. Uniform spaces and completeness	5
6. Nowhere-dense sets and sets of first and second category	6
7. Topological products	6
8. Mappings	7
9. Vector spaces	8
2. TOPOLOGICAL VECTOR SPACES	11
1. Definition of a topological vector space	11
2. Neighbourhood systems in a TVS	13
3. The Hahn–Banach theorem	14
4. Locally convex topological vector spaces	16
5. Inductive limits of l.c. spaces	18
6. Barrelled and bornological spaces	19
7. \mathcal{G} -topologies and the principle of uniform boundedness	22
8. The Banach–Steinhaus theorem	25
9. Duality theory	27
3. THE OPEN-MAPPING AND CLOSED-GRAPH THEOREMS	34
1. Finite-dimensional TVS's and the open-mapping theorem	34
2. Banach's theorems	36
3. Some generalizations of Theorems 3 and 5	42
4. B -COMPLETENESS AND THE OPEN-MAPPING THEOREM	45
1. Definition of B -complete spaces	45
2. The $v(u)$ -topology	49
3. Ultra-barrelled spaces	51
4. B_r -complete l.c. spaces	54
5. The open-mapping and closed-graph theorems for B_r -complete spaces	56
5. THE ew^* -TOPOLOGY AND VARIOUS NOTIONS OF COMPLETENESS	59
1. The k -extension of a topology in topological spaces	59
2. The k -extension of a topology in a topological vector space	60

3. The ew^* -topology and completeness	61
4. The ew^* -topology and pseudo-completeness	64
5. The cew^* -topology and completeness	65
6. The ew^* -topology and hypercompleteness	68
6. THE THEORY OF S -SPACES	71
1. Definition and a characterization of S -spaces	71
2. S -spaces and B -completeness	73
3. The Krein-Šmulian theorem	75
4. Subspaces and quotient spaces of an S -space	76
5. The dual of an S -space	78
6. Countability conditions	80
7. LOCALLY CONVEX SPACES WITH THE $B(\mathcal{C})$ -PROPERTY	82
1. The concept of the $B(\mathcal{C})$ -property	82
2. The closed-graph theorem for $B_r(\mathcal{C})$ -spaces	84
3. The $B_r(\mathcal{J})$ - and the $B(\mathcal{J})$ -spaces	85
4. $B(\mathcal{L}\mathcal{J})$ -spaces and $B(\mathcal{J})$ -spaces	88
5. The closed-graph theorem for $B_r(\mathcal{J})$ -spaces	90
6. Examples and counter-examples	92
8. HISTORICAL NOTES	96
