Introduction	1
§ 1 <u>Lipschitz type conditions</u>	4
1. Existence and uniqueness	4
2. Approximate solutions	4
3. Extension of solutions	6
4. Linear equations	8
5. Excursion to nonlinear eigenvalue problems	13
6. Remarks	15
§ 2 <u>Compactness conditions</u>	18
1. Nonexistence	18
2. Measures of noncompactness	19
3. Existence	21
4. The set of solutions	23
5. Excursion to Ovcyannikov	25
6. Remarks	27
§ 3 <u>Conditions of dissipative type</u>	32
1. Duality maps and semi-inner products	33
2. Uniqueness	37
3. Local existence	39
4. Global existence	40
5. Excursion to stochastic differential equations	41
6. Excursion to continuous accretive operators	44
7. Remarks	46
§ 4 <u>Solutions in closed sets</u>	49
1. Boundary conditions	49
2. Approximate solutions	51
3. Existence	54
4. Examples	58
5. Remarks	62
§ 5 <u>Flow invariance and differential inequalities</u>	65
1. Boundary conditions	65
2. Flow invariance	67
3. Differential inequalities	70
4. Maximal and minimal solutions	72
5. Remarks	74
§ 6 <u>Countable systems of ordinary differential equations</u>	78
1. Lower diagonal systems	78
2. Row-finite systems	81
3. General systems	85
4. The function $\exp(At)$	88
5. Remarks	91

§ 7	<u>Approximate solutions</u>	95
	1. Galerkin approximations in Banach spaces	96
	2. Galerkin approximations for countable systems	98
	3. Examples	102
	4. Remarks	106
§ 8	<u>Related topics</u>	113
	1. Carathéodory conditions	113
	2. Weaker continuity	116
	3. Evolution equations	118
	4. Qualitative properties	125
	Bibliography	126
	Index	137
