|                                    |    |
|------------------------------------|----|
| <b>Preface</b>                     | xi |
| <b>1 Introduction</b>              | 1  |
| 1-1 Explanatory                    | 1  |
| 1-2 Table of spaces                | 2  |
| 1-3 Some computations              | 3  |
| 1-4 Nets                           | 5  |
| 1-5 Vector space                   | 7  |
| 1-6 Topology                       | 10 |
| <b>2 Metric Ideas</b>              | 15 |
| 2-1 Paranorms                      | 15 |
| 2-2 Seminorms                      | 18 |
| 2-3 Seminormed space               | 21 |
| <b>3 Banach Space</b>              | 27 |
| 3-1 Banach space                   | 27 |
| 3-2 The second dual                | 29 |
| 3-3 Uniform boundedness            | 32 |
| <b>4 Topological Vector Spaces</b> | 37 |
| 4-1 Definitions and examples       | 37 |
| 4-2 Properties                     | 40 |

|           |   |            |
|-----------|---|------------|
| 4-3       | Construction                                  | 44         |
| 4-4       | Bounded sets                                  | 47         |
| 4-5       | Metrization                                   | 50         |
| <b>5</b>  | <b>Open Mapping and Closed Graph Theorems</b> | <b>56</b>  |
| 5-1       | Fréchet space                                 | 56         |
| 5-2       | Open maps                                     | 57         |
| 5-3       | Closed graph                                  | 60         |
| 5-4       | The basis                                     | 64         |
| 5-5       | <i>FH</i> spaces                              | 67         |
| <b>6</b>  | <b>Five Topics</b>                            | <b>72</b>  |
| 6-1       | Completeness                                  | 72         |
| 6-2       | Quotients                                     | 77         |
| 6-3       | Finite-dimensional space                      | 81         |
| 6-4       | Totally bounded sets                          | 83         |
| 6-5       | Compact sets                                  | 87         |
| <b>7</b>  | <b>Local Convexity</b>                        | <b>91</b>  |
| 7-1       | Locally convex space                          | 91         |
| 7-2       | Seminorms                                     | 94         |
| 7-3       | Separation and support                        | 98         |
| <b>8</b>  | <b>Duality</b>                                | <b>103</b> |
| 8-1       | Compatible topologies                         | 103        |
| 8-2       | Dual pairs                                    | 107        |
| 8-3       | Polars  | 110        |
| 8-4       | Boundedness                                   | 114        |
| 8-5       | Polar topologies                              | 118        |
| 8-6       | Some complete spaces                          | 123        |
| <b>9</b>  | <b>Equicontinuity</b>                         | <b>128</b> |
| 9-1       | Equicontinuous sets                           | 128        |
| 9-2       | The Mackey–Arens theorem                      | 132        |
| 9-3       | Barrelled spaces                              | 136        |
| 9-4       | The equivalence program                       | 141        |
| 9-5       | Separable spaces                              | 143        |
| 9-6       | Applications                                  | 145        |
| <b>10</b> | <b>The Strong Topology</b>                    | <b>149</b> |
| 10-1      | The natural embedding                         | 149        |
| 10-2      | Semireflexivity                               | 153        |
| 10-3      | Reflexivity                                   | 156        |
| 10-4      | Boundedness                                   | 157        |
| 10-5      | Metric space                                  | 162        |

|  |     |
|--|-----|
| <b>11 Operators</b>                            | 164 |
| 11-1 Dual operators                            | 164 |
| 11-2 The Hellinger–Toeplitz theorem            | 167 |
| 11-3 Banach space                              | 169 |
| 11-4 Weakly compact operators on Banach spaces | 174 |
| <b>12 Completeness</b>                         | 178 |
| 12-1 Precompact convergence                    | 178 |
| 12-2 $aw^*$                                    | 184 |
| 12-3 Strict hypercompleteness                  | 189 |
| 12-4 Full completeness                         | 193 |
| 12-5 Closed graph theorems                     | 200 |
| 12-6 Converse theorems                         | 204 |
| <b>13 Inductive Limits</b>                     | 209 |
| 13-1 Inductive limits                          | 209 |
| 13-2 Direct sums                               | 213 |
| 13-3 Strict inductive limits                   | 218 |
| 13-4 Finite collections of metric spaces       | 224 |
| <b>14 Compactness</b>                          | 227 |
| 14-1 Weak compactness                          | 227 |
| 14-2 Convex compactness                        | 231 |
| 14-3 Extreme points                            | 233 |
| 14-4 Phillips' lemma                           | 235 |
| 14-5 The space $L$                             | 239 |
| 14-6 The space $M(H)$                          | 240 |
| 14-7 $GB$ and $G$ spaces                       | 244 |
| <b>15 Barrelled Spaces</b>                     | 248 |
| 15-1 Barrelled subspaces                       | 248 |
| 15-2 Inclusion theorems                        | 252 |
| 15-3 The separable quotient problem            | 254 |
| 15-4 The strong topology                       | 258 |
| 15-5 Miscellaneous                             | 264 |
| <b>Tables</b>                                  | 267 |
| <b>Bibliography</b>                            | 283 |
| <b>Subject index</b>                           | 288 |
