

Contents

CHAPTER ONE: INTRODUCTION, BASIC PROPERTIES	1
1. Orientation, Classification of Typical Problems	1
2. Examples of Sequence Spaces	3
3. Algebraic and Combinatorial Structures	6
4. Galois Duality Theory with Respect to Product and Convolution	9
5. Methods of Generating Sequence Spaces	13
CHAPTER TWO: KÖTHE SEQUENCE SPACES	20
1. Introduction	20
2. The Normal Topology on Köthe Spaces	29
3. Schwartz and Nuclear Sequence Spaces	34
4. Mackey and Strong Topologies	44
5. Representation of Function Spaces	51
CHAPTER THREE: TOPOLOGIES ON SEQUENCE SPACES	57
1. A Generalization of the Köthe-Toeplitz Duality Theory	57
2. The Zeller Theory of FK-Spaces	59
3. ϕ -Duality Theory	65
4. Comparison of the Generalized Köthe-Toeplitz Theory with the ϕ -Duality Theory. Sum Spaces..	69
5. Lattices of Locally Convex K-Spaces	75
6. Further Lattice Properties of Locally Convex K-Spaces	83
7. Abelian and Tauberian Theorems	87

CHAPTER FOUR: MAPPINGS BETWEEN SEQUENCE SPACES	96
1. Matrix Mappings Between Certain Spaces, Continuity	96
2. The Preimage of a Matrix, ZK-Spaces	101
3. Mappings into m , c , c_0 , bs and cs	104
4. Mappings from l^1 , bv_0 , bv	110
5. Mappings from l^2 into l^2	111
6. Diagonals of Matrix Mappings	116
7. The Multiplier Algebra of a Sequence Space	122
8. The Multiplier Algebra m	133
9. Mappings from l^p into l^q ($p > q$); a Theorem of Pitt	138
10. The Shift Operator and Convolution	141
11. Some Results on $(S \text{ } \& T)$ and $M^*(S)$, an Application to Difference Equations	144
12. Matrix Mappings of Köthe Spaces	150
CHAPTER FIVE: TOPICS FROM SUMMABILITY THEORY	159
1. Some Problems of Summability Theory	159
2. Nörlund and Cesàro Means	161
3. Hausdorff Means	167
4. Topological Properties of c_A	174
5. The Extent of c_A	179
6. The Bounded Consistency Theorem	190
