

## CONTENTS

GENERAL INTRODUCTION	1
<u>PART 0 : A REVIEW OF THE LINEAR BACKGROUND</u>	
Introduction	3
§ 0.1 Locally convex spaces	4
§ 0.2 Bornological vector spaces	10
§ 0.3 Elements of duality	15
§ 0.4 Compact and nuclear mappings in normed spaces	19
§ 0.5 Schwartz and nuclear spaces	22
§ 0.6 A few classes of infinite dimensional spaces	25
§ 0.7 Compact and nuclear subsets of Fréchet spaces	29
§ 0.8 Multilinear mappings and polynomials.	35
<u>PART I : BASIC DIFFERENTIAL CALCULUS AND HOLOMORPHY</u>	
Introduction	41
<u>Chapter 1 : Differentiable mappings, basic properties</u>	45
§ 1.0 Definition of differentiability in normed spaces	47
§ 1.1 Definition of (Silva) differentiable mappings	48
§ 1.2 Definitions of $C^n$ and $C^\infty$ mappings	52
§ 1.3 Mean value theorem and Taylor's formulas	55
§ 1.4 $C^\infty$ mappings in the enlarged sense	61
§ 1.5 Mappings which are "locally differentiable between normed spaces"	69
§ 1.6 $C^\infty$ mappings of uniform bounded type	72
<u>Chapter 2 : Holomorphic mappings, basic properties</u>	77
§ 2.1 Gateaux analytic mappings	79
§ 2.2 Silva holomorphic mappings	83
§ 2.3 Holomorphic mappings and Silva holomorphic mappings in the enlarged sense	88
§ 2.4 $C^\infty$ differentiability of holomorphic mappings	92
§ 2.5 An example	98
§ 2.6 Series of homogeneous polynomials	101
§ 2.7 Holomorphic mappings of uniform bounded type	105
§ 2.8 Holomorphic representation of Fock spaces of Boson Fields	109

<u>Chapter 3 : Classical properties of holomorphic mappings</u>	113
§ 3.1 Vector valued holomorphy versus scalar valued holomorphy	115
§ 3.2 Zorn's theorem	118
§ 3.3 Hartogs' theorem	123
§ 3.4 Montel's theorem	126
<u>Chapter 4 : Topologies on <math>\mathcal{H}(\Omega, F)</math> and <math>\mathcal{K}_S(\Omega, F)</math></u>	129
§ 4.1 Natural topologies on $\mathcal{H}(\Omega, F)$ and $\mathcal{K}_S(\Omega, F)$	131
§ 4.2 Completeness of $\mathcal{K}_S(\Omega, F)$ and $\mathcal{H}(\Omega, F)$	134
§ 4.3 Schwartz property of $\mathcal{K}_S(\Omega, F)$ and $\mathcal{H}(\Omega, F)$	138
§ 4.4 Reflexivity of $\mathcal{K}_S(\Omega, F)$ and $\mathcal{H}(\Omega, F)$	142
<u>Chapter 5 : Approximation and density results</u>	143
§ 5.1 A density result in $\mathcal{K}_S(\Omega, F)$	145
§ 5.2 A density result in $\mathcal{H}(\Omega, F)$	149
§ 5.3 $C^\infty$ partitions of unity	154
<u>Chapter 6 : <math>\varepsilon</math>-product and kernel theorems</u>	157
§ 6.1 Schwartz $\varepsilon$ -product in spaces of holomorphic functions	159
§ 6.2 Schwartz $\varepsilon$ -product in spaces of $C^\infty$ functions	164
§ 6.3 Approximation property in $\mathcal{K}_S(\Omega)$ and $\mathcal{H}(\Omega)$	166
<u>Chapter 7 : The Fourier-Borel and Fourier transforms</u>	167
§ 7.1 Preliminary results on the Fourier-Borel transform	169
§ 7.2 The Fourier-Borel isomorphism	176
§ 7.3 Holomorphic germs	182
§ 7.4 The Fourier transform and the Paley-Wiener-Schwartz isomorphisms	186
<u>Chapter 8 : Nuclearity of spaces of holomorphic or <math>C^\infty</math> mappings</u>	192
§ 8.1 Nuclearity of $\mathcal{K}_S(\Omega)$	193
§ 8.2 Strong nuclearity of $\mathcal{K}_S(\Omega)$	201
§ 8.3 Non nuclearity of $\mathcal{H}(\Omega)$	205
<u>PART II : CONVOLUTION AND <math>\bar{\partial}</math> EQUATIONS</u>	
Introduction	206
<u>Chapter 9 : Convolution equations in <math>\mathcal{P}(E)</math></u>	208
§ 9.1 Formal power series and duality	209
§ 9.2 A division result	213
§ 9.3 The convolution operators on $\mathcal{P}(E)$	217
§ 9.4 Existence of solutions	222

<u>Chapter 10</u> : <u>Convolution equations in spaces of entire functions of exponential type</u>	223
§ 10.1 The convolution operators on $\mathcal{F}\mathcal{K}_S^1(\Omega)$	224
§ 10.2 Approximation of the solutions	229
§ 10.3 Existence of solutions	235
<u>Chapter 11</u> : <u>Division of distributions</u>	245
§ 11.1 The Weierstrass preparation theorem	246
§ 11.2 Division by a complex polynomial	252
§ 11.3 Division of distributions by holomorphic functions	262
§ 11.4 Application to existence of solutions	266
§ 11.5 Division by real analytic functions of finite type	268
§ 11.6 Impossibility of the division by real polynomials	272
<u>Chapter 12</u> : <u>Convolution equations in spaces of holomorphic functions</u>	277
§ 12.1 The convolution operators on $\mathcal{K}_S(E)$	279
§ 12.2 Entire functions of nuclear bounded type on a Banach space	283
§ 12.3 The convolution operators on $\mathcal{K}_{u,b}(E)$	293
§ 12.4 The convolution operators on $\mathcal{K}_{N,b}(E)$	301
§ 12.5 A division result	308
§ 12.6 Existence and approximation results in $\mathcal{K}_{N,b}(E)$	317
§ 12.7 Existence and approximation results in $\mathcal{K}_{u,b}(E)$ and $\mathcal{K}_S(E)$	321
§ 12.8 Convolution operators of finite type	324
<u>Chapter 13</u> : <u>Linear finite difference partial differential equations in <math>\mathcal{S}(E)</math></u>	326
§ 13.1 A division result by imaginary exponential polynomials	327
§ 13.2 A Paley-Wiener-Schwartz theorem and a division result	337
§ 13.3 Existence and approximation of solutions in normed spaces	342
§ 13.4 Existence of solutions in locally convex spaces	346
<u>Chapter 14</u> : <u>Pseudo-convex domains and approximation results</u>	347
§ 14.1 Glimpse at pseudo-convexity and domains of holomorphy	348
§ 14.2 The Lévi problem	354
§ 14.3 The Runge approximation theorem	362
§ 14.4 An approximation theorem	372
<u>Chapter 15</u> : <u>The <math>\bar{\partial}</math> equation</u>	376
§ 15.1 Differential forms and $\bar{\partial}$ operator	377
§ 15.2 A review of Hormander's $L^2$ estimates and existence theorems	379

§ 15.3	A review on integration in Hilbert spaces	383
§ 15.4	A basic existence result	388
§ 15.5	An hypoellipticity result	398
§ 15.6	The $\bar{\partial}$ equation in a scale of Hilbert spaces	401
§ 15.7	Existence of $C^\infty$ solutions in pseudo-convex open subsets of DFN spaces	404
§ 15.8	Existence of $C^\infty$ solutions in nuclear $\ell.c.s.$	407
<u>Chapter 16 : Some applications of the <math>\bar{\partial}</math> equation</u>		409
§ 16.1	Solution of the first Cousin problem	410
§ 16.2	A counterexample	412
§ 16.3	On solutions of some homogeneous convolution equations	416
