

TABLE OF CONTENTS

GENERAL INTRODUCTION	1
I. MATHEMATICAL PRELIMINARIES	4
1.0 Introduction.	4
1.1 Linear Topological Spaces	4
1.2 Some Basic Mathematical Tools	10
1.3 Basis Theory.	11
II. RANDOM ELEMENTS IN SEPARABLE METRIC SPACES	15
2.0 Introduction.	15
2.1 Definition of a Random Element.	15
2.2 Basic Properties of Random Elements	16
2.3 Topological Properties of Random Elements	20
III. LAWS OF LARGE NUMBERS FOR RANDOM VARIABLES AND SEPARABLE HILBERT SPACES	31
3.0 Introduction.	31
3.1 Laws of Large Numbers for Random Variables.	31
3.2 Extensions to Separable Hilbert Spaces.	35
IV. STRONG LAWS OF LARGE NUMBERS FOR NORMED LINEAR SPACES.	41
4.0 Introduction.	41
4.1 Independent, Identically Distributed Random Elements.	41
4.2 Beck's Convexity Condition.	45
4.3 Restrictions on the Random Elements	55
4.4 Other Convergence Results	64

V.	WEAK LAWS OF LARGE NUMBERS FOR NORMED LINEAR SPACES.	66
5.0	Introduction.	66
5.1	Normed Linear Spaces with Schauder Bases.	66
5.2	Separable Normed Linear Spaces and Weakly Uncorrelated Random Elements	73
5.3	Comparisons	76
VI.	LAWS OF LARGE NUMBERS FOR FRÉCHET SPACES	84
6.0	Introduction.	84
6.1	Strong Laws	84
6.2	Weak Laws	88
VII.	SOME APPLICATIONS.	92
7.0	Introduction.	92
7.1	Applications in Stochastic Processes.	92
7.2	Application in Decision Theory.	98
	BIBLIOGRAPHY	104
