## PART ONE

### ALGEBRAIC EXTERIOR FORMS

Introduction . . . . .	17
------------------------	----

#### CHAPTER I

##### TENSORS

1. Vector space . . . . .	19
2. Dual vector spaces . . . . .	21
3. Contravariant tensors . . . . .	24
4. Covariant tensors . . . . .	27
5. Mixed tensors . . . . .	28
6. Operations on tensors . . . . .	29
7. The unity tensor . . . . .	30
8. Tensor densities . . . . .	31
9. The complex vector space . . . . .	32

#### CHAPTER II

##### ALGEBRAIC EXTERIOR FORMS

10. The exterior product of vectors . . . . .	34
11. Exterior forms . . . . .	36
12. The product of exterior forms . . . . .	37
13. Transformations of exterior forms . . . . .	39
14. The value of an exterior form . . . . .	41
15. Derivatives of an exterior form . . . . .	43
16. The rank of an exterior form . . . . .	44

#### CHAPTER III

##### LINEAR AND QUADRATIC EXTERIOR FORMS

17. Linear forms . . . . .	47
18. Divisibility of exterior forms . . . . .	49
19. The rank of a quadratic form . . . . .	53
20. The involution of vectors relative to a quadratic form . . . . .	53

21. The canonical form of an exterior quadratic form . . . . .	54
22. Pfaff's aggregate . . . . .	56
23. The divisibility of exterior forms by a quadratic form . . . . .	59

## CHAPTER IV

## EXTERIOR EQUATIONS

24. Definition . . . . .	61
25. Criteria for solutions . . . . .	61
26. Systems of exterior equations . . . . .	65
27. Solutions of dimension $p+1$ which contain a given $p$ -dimensional solution . . . . .	66
28. The characters and the genus of a system of exterior equations . . . . .	68
29. Special systems of exterior equations . . . . .	73
30. Remark . . . . .	74

## CHAPTER V

## CLASSES OF REAL VECTOR SPACES

31. Introduction . . . . .	75
----------------------------	----

## 1. Unimodular, Euclidean, Minkowskian and Weyl spaces

32. The unimodular vector space . . . . .	76
33. Euclidean vector space . . . . .	76
34. Euclidean space with an arbitrary basis . . . . .	79
35. $r$ -vectors of the Euclidean space . . . . .	82
36. The Minkowskian vector space . . . . .	85
37. The Weyl vector space . . . . .	87

## 2. The symplectic vector space and symplectic group

38. Definitions . . . . .	88
39. The properties of the group $Sp(2r)$ . . . . .	89
40. Symplectic bases . . . . .	90
41. The symplectic vector space with arbitrary basis . . . . .	91
42. Symplectic subspaces of a symplectic vector space . . . . .	95
43. The induced fundamental form on a subspace . . . . .	101
44. Invariants of a system of vectors . . . . .	101
45. The characteristic polynomial of an exterior quadratic form . . . . .	105
46. The reduction of an exterior quadratic form by means of symplectic transformations . . . . .	107
47. Example . . . . .	113

## CHAPTER VI

## SPECIAL COMPLEX VECTOR SPACES

48. Introduction . . . . .	114
49. The real representation of a complex vector space . . . . .	114
50. The space $E_c^{2r}$ with an arbitrary basis . . . . .	117

51. The Hermitian vector space . . . . .	120
52. Properties of the unitary group . . . . .	121
53. The Hermitian space with arbitrary basis . . . . .	123

CHAPTER VII

THE AFFINE SPACE

54. Definition . . . . .	126
55. Translations of the affine space . . . . .	128
56. Frames in affine spaces . . . . .	128
57. Linear submanifolds of the affine space . . . . .	130
58. The volume of a parallelepiped . . . . .	131
59. Special affine spaces . . . . .	131

CHAPTER VIII

APPLICATIONS OF THE THEORY OF EXTERIOR FORMS TO THE THEORY OF LINEAR COMPLEXES

60. The projective space . . . . .	135
61. Linear complexes . . . . .	137
62. The Grassmann space . . . . .	138
63. Special linear complexes . . . . .	138
64. Complexes of lines . . . . .	141
65. Complexes of lines in the 3-dimensional projective space . . . . .	143

PART TWO

DIFFERENTIAL EXTERIOR FORMS

Introduction . . . . .	145
------------------------	-----

CHAPTER I

EXTERIOR FORMS IN THE NUMERICAL SPACE

66. Introduction . . . . .	147
67. The differential of a function . . . . .	149
68. Differential forms . . . . .	150
69. The value of a differential form . . . . .	152
70. The exterior differential . . . . .	152
71. Properties of the exterior differential . . . . .	154
72. Multilinear differential forms . . . . .	157
73. The theorem of Poincaré . . . . .	158

## CHAPTER II

**COMPLETELY INTEGRABLE PFAFF SYSTEMS AND THEIR APPLICATIONS****1. Completely integrable Pfaff systems**

74. Definition . . . . .	161
75. Integral curves . . . . .	162
76. The closure of a Pfaff system . . . . .	163
77. Completely integrable Pfaff systems . . . . .	164
78. Integration of a completely integrable Pfaff system . . . . .	168

**2. Applications**

79. The class of a differential form . . . . .	170
80. The canonical form of a closed quadratic differential form . . . . .	175
81. The canonical form of a linear differential form . . . . .	177
82. The canonical form of $n$ -forms and $(n-1)$ -forms of $n$ variables . . . . .	178
83. Systems of partial differential equations associated with completely integrable Pfaff systems . . . . .	179

## CHAPTER III

**GENERAL PFAFF SYSTEMS. CARTAN'S THEOREM**

84. Definitions . . . . .	184
85. Integral elements . . . . .	185
86. The fundamental theorem . . . . .	188
87. Proof of Cartan's theorem (Part I) . . . . .	189
88. Proof of Cartan's theorem (Part II) . . . . .	194
89. Remarks concerning the general integral of a Pfaff system . . . . .	202
90. Complements . . . . .	203
91. Singular integrals . . . . .	206
92. Examples of Pfaff systems . . . . .	208

## CHAPTER IV

**PFAFF EQUATION (QUADRATIC EXTERIOR DIFFERENTIAL EQUATION)**

93. The single Pfaff equation . . . . .	210
94. The quadratic exterior equation . . . . .	212
95. Completely integrable quadratic equation . . . . .	213

## CHAPTER V

**PFAFF SYSTEMS IN INVOLUTION**

96. Definition . . . . .	216
97. Criteria for a system to be in involution . . . . .	217
98. Sufficient condition for a system to be in involution . . . . .	226
99. Complements . . . . .	227
100. Historical note . . . . .	229

CHAPTER VI

**DIFFERENTIAL FORMS ON MANIFOLDS**

101. Differential manifolds . . . . .	231
102. Geometrical objects on a manifold . . . . .	234
103. Completely integrable Pfaff systems . . . . .	236
104. Vector spaces tangent to a manifold . . . . .	236
105. The affine space tangent to the manifold . . . . .	240

CHAPTER VII

**LIE GROUPS**

106. Definition . . . . .	241
107. Representations of an abstract Lie group . . . . .	242
108. The topological properties of a Lie group . . . . .	243
109. Generators of a Lie group . . . . .	244
110. The structure of a Lie group . . . . .	245
111. The algebra of a Lie group . . . . .	248
112. Subgroups. . . . .	249

CHAPTER VIII

**LINEAR LIE GROUPS**

113. Definition . . . . .	252
114. The moving basis in $E^n$ . . . . .	252
115. Infinitesimal transformations of a linear group . . . . .	256
116. The groups $GL(n, R)$ and $SL(n, R)$ . . . . .	256
117. The orthogonal group and the group of Weyl spaces . . . . .	258
118. The symplectic group . . . . .	259
119. The groups $K_{2r}$ and $L_{2r}$ . . . . .	261
120. Linear groups associated with a given linear group . . . . .	263
121. The structure of the affine space . . . . .	266

CHAPTER IX

**AFFINE CONNECTIONS**

122. The tangent bundle of a manifold . . . . .	269
123. Cross-sections of a fibre bundle . . . . .	271
123. Affine connections . . . . .	271
125. The absolute differential . . . . .	279
126. Affine connections expressed in local coordinates . . . . .	282
127. Associated connections . . . . .	287

CHAPTER X

**THE CLASSICAL AFFINE CONNECTIONS**

128. Introduction. . . . .	292
<b>1. Spaces admitting an absolute parallelism</b>	
129. Definition . . . . .	292
130. Properties of AP-manifolds . . . . .	293

131. Metrics on AP-manifolds . . . . .	294
132. The equivalence problem . . . . .	295
133. A historical note . . . . .	298

## 2. Linear and unimodular connections

134. Linear connections . . . . .	298
135. Unimodular connections . . . . .	300

## 3. Euclidean connections

136. Structure . . . . .	302
137. The Riemannian connection . . . . .	306
138. Riemannian connection in local coordinates . . . . .	307
139. Equivalence problem of ordinary quadratic differential forms . . . . .	308

## 4. Weyl connections

140. The general Weyl connection . . . . .	308
141. Weyl connections without torsion . . . . .	309

## 5. Symplectic connections

142. Exterior quadratic form . . . . .	310
143. Exterior quadratic forms conformal to closed forms . . . . .	312
144. Symplectic connections . . . . .	314
145. Properties of symplectic connections . . . . .	317
146. Geometrization of a quadratic exterior form . . . . .	319

## 6. Complex and almost complex connections

147. Almost complex connections . . . . .	324
148. The torsion of an almost complex structure . . . . .	326
149. Differential covariants of the tensor of the almost complex structure . . . . .	329
150. Complex connections . . . . .	331

## 7. Unitary connections

151. Introduction . . . . .	335
152. Unitary connections . . . . .	335
153. Unitary connections in the dimension 4 . . . . .	338
154. The properties of the connection $\mathcal{E}_4$ . . . . .	339
155. Application of the connection $\mathcal{E}_4$ in the unified field theory . . . . .	340

## CHAPTER XI

### INFINITE PSEUDOGRUUPS

156. Introduction . . . . .	343
-----------------------------	-----

#### 1. Transitive pseudogroups of order 1

157. Definition . . . . .	344
158. Prolongation of the system ( $D$ ) . . . . .	346

159. Fundamental theorems . . . . .	347
160. Prolongation of a pseudogroup. Invariant forms . . . . .	349
161. The structural equations of the pseudogroup $G$ . . . . .	353
162. The moving basis . . . . .	356
163. The structure group of an infinite pseudogroup . . . . .	357
164. The pseudogroup $G$ and affine connections . . . . .	361

**2. Generalizations**

165. Infinite pseudogroups of second order . . . . .	362
166. Intransitive pseudogroups . . . . .	363

CHAPTER XII

**INFINITE CONTINUOUS GROUPS OF LIE-CARTAN**

167. Introduction . . . . .	366
168. The structural group . . . . .	366
169. The space of an infinite group . . . . .	367
170. The fundamental theorem . . . . .	368
171. The structural constants . . . . .	371
172. Representations of an abstract infinite continuous group . . . . .	371
173. Properties of an infinite continuous group . . . . .	372

CHAPTER XIII

**INTEGRAL INVARIANTS**

174. Introduction . . . . .	373
-----------------------------	-----

**1. Multiple integrals**

175. The integration domain . . . . .	374
176. Multiple integrals . . . . .	374
177. Multiple integrals (continued) . . . . .	376
178. Stokes theorem . . . . .	378

**2. Integral invariants. Invariant forms**

179. Integral invariants and forms . . . . .	379
180. The one-dimensional Lie pseudogroup . . . . .	381
181. The infinitesimal transformation of the pseudogroup $g$ . . . . .	383
182. Integral invariants of the pseudogroup $Xf$ . . . . .	384

**3. The Lie derivative of a differential form**

183. The Lie derivative . . . . .	386
184. The properties of the derivative $L_X \Phi_p$ . . . . .	390
185. The Lie derivative of a contravariant vector . . . . .	392
186. Invariancy criteria for integrals and forms . . . . .	395
187. The inner product of an exterior differential form and a contravariant vector . . . . .	396

**4. Invariants associated with trajectories**

188. Definition . . . . .	399
189. Criteria for invariant integrals associated with trajectories . . . . .	400

**5. Integral invariants in mechanics**

190. Introduction . . . . .	402
191. Completed forms . . . . .	403
192. Theorems of Poincaré and Cartan . . . . .	405
193. Applications of invariant forms and invariant integrals . . . . .	409

## CHAPTER XIV

**APPENDIX****1. Generalized exterior differential of a form**

194. Definition . . . . .	411
---------------------------	-----

**2. Infinitesimal transformation of a Lie group**

195. The case of a finite Lie group . . . . .	412
196. The case of infinite groups . . . . .	415
<b>Bibliography</b> . . . . .	417
<b>List of symbols</b> . . . . .	421
<b>Subject index</b> . . . . .	423

---
