CHAPTER 1 PREREQUISITES

1. Introduction	1
2. Topological Vector Spaces	1
3. Continuity of Linear Maps	6
4. Types of TVS	12
5. More Results on Continuity and Equicontinuity	14
6. Locally Convex Spaces	16
7. Duality	18
8. Barreled and Bornological Spaces	22
Results on F-spaces	23
9. Reflexive and Montel Spaces	25
10. Properties of a TVS and Its Dual	26
Sequential barreledness and completeness	30
Other forms of the closed graph theorem	30
Sequential, bounded, and precompact topologies	31
Smulian's SB-spaces	32
A condition for reflexivity	33
11. Other Useful Topologies	34
12. Adjoints of Linear Maps	36
13. Nuclearity and Approximative Dimension	36
Nuclear and Schwartz spaces	40
14. Two-Norm Spaces	42

CHAPTER 2 SEQUENCE SPACES

1. Introduction	45
2. Basic Definitions and Results	46
Duals	50
3. Topology on Sequence Spaces	57
K-spaces relative to α -, β -, and γ -duals	62
Spaces of the form λ_A , μ_A , and ν_A	66
Sequence spaces: natural metrics and duals	67
Construction of abstract BK-topologies	70
Dual of the space λ_N	72
4. Normal Topology	74
Strongest locally normal topology	80
5. Perfect, Simple, and Symmetric Spaces	82

Perfect spaces	82
Simple sequence spaces	87
Symmetric sequence spaces	90
6. Duality between Perfect Spaces	103
Duality between ϕ and ω	104
Duality between ℓ^1 and ℓ^∞	107
Duality between ℓ^p and ℓ^q ($1 < p, q < \infty$)	112
Duality between δ and d	114
7. Duality between Nonperfect Spaces	118
Duality between c_0 and ℓ^1	118
Duality between k and ℓ^1	121
Duality between ℓ^p ($0 < p < 1$) and ℓ^∞	123
Duality between ℓ^1 and m_0	125
Dual of ℓ^∞	129
8. Mackey Convergence of Nth Sections	132
Diagonal transformations and compatibility of $\eta(\lambda, \lambda^x)$	133
The sequence spaces λ_x and λ_x^x	137

CHAPTER 3 CONVERGENCE OF SERIES

1. Introduction	140
2. Absolute Convergence	142
3. Bounded Multiplier and Subseries Convergence	144
4. Unconditional and Unordered Convergence	154
5. Interrelationships of Types of Convergence	159
Comments on the Dvoretzky-Rogers theorem	163
6. Unordered Boundedness	163
7. Weak Convergence Theorems	170
8. Unordered Precompactness	173
Weak compactness and subseries convergence	176
9. Linear Transformations and Convergence Criteria	178
10. Further Advances	183

CHAPTER 4 FURTHER DEVELOPMENTS IN SEQUENCE SPACES

1. Introduction	187
2. Convergence of Nth Sections	187
Convergence in $\delta(\lambda, \lambda^x)$	188
Sequential and bounded duals	190
Topologies T^b and T^p	195
The space λ_0	196
Convergence in $\beta(\lambda, \lambda^x)$	201
3. Inclusion Theorems for FK-Spaces	204
Preliminaries on matrix transformations	205
Inclusion theorems	209
FK-spaces containing c_0	212
The two-norm topology on $W_\lambda \cap \ell^\infty$	213
K-spaces containing ℓ^1 , bv , or bv_0	222
FK-spaces containing ℓ^p ($1 < p < \infty$)	223
FK-spaces containing ℓ^∞	224
FK-spaces containing ℓ^p ($0 < p \leq 1$)	228
Scarce copies of sequence spaces	229
4. Duality between λ and λ^β	232
Barreledness of $(\lambda, \tau(\lambda, \lambda^\beta))$	233

	Sequential completeness of λ^β	235
5.	Topological Properties of Coordinate and Unit Vectors	242
	Wedge spaces	242
	Conull spaces	252
6.	Matrix Transformations	254
	Specific transformations	254
	Transformations related to simple sequence spaces	255
	Further remarks on analytic sequence spaces	261
	Dual of an entire sequence space	263
	Transformations related to FK-spaces	265
	Diagonal transformations	268
	Composition of transformations	272
	Summability domains	276
	The characterization theorem for μ_A	276
	Wedge and conull properties of μ_A	278
7.	Nuclear Sequence Spaces	281
	Sequence spaces generated by power sets	282
	Estimation of diameters in sequence spaces	284
	Characterization of nuclear and Schwartz spaces	287
	Schwartz property and nuclearity of G_∞ -spaces	289
	Schwartz property and nuclearity of G_1 -spaces	291
	Comments on generalizations of nuclearity	293
	Matrix transformations in nuclear spaces	294
8.	Orlicz and Modular Sequence Spaces	297
	Orlicz sequence spaces	298
	Comparison of ℓ_M with ℓ^p ($1 \leq p \leq \infty$)	307
	Duals of h_M and ℓ_M	310
	Remarks on Orlicz sequence spaces	311
	OK-spaces	312
	Modular sequence spaces	319
9.	Lorentz Sequence Spaces	323
	A method of constructing a topology	324
	Construction of symmetric perfect spaces	326
	A special case of μ_Q	328
	AK-property of μ_Q	330
	The space $d(x, p)$	333
	Dual of $d(x, p)$	335
	Comparison of $d(x, p)$ and $d(x, p)^*$ with ℓ^p	341
	REFERENCES	343
	ABBREVIATIONS AND NOTATION	355
	INDEX	363
