CHAPTER 1 PRELIMINARIES

1. Basic facts and notations	1
2. Convex functions and generalized gradients	4
3. Evolution equations in Banach spaces	8
4. Control systems in Hilbert spaces	12
5. Stochastic differential equations	14
6. References	18

CHAPTER 2 EXISTENCE IN THE CLASS OF CONVEX FUNCTIONS

1. Introduction	20
2. The contraction semigroup associated with Eq. (1.1)	23
3. Equation (1.1) where $A = 0$	28
4. Existence and uniqueness for $F(x) = \frac{1}{2} x ^2$	35
5. Further regularity results	46
6. An application to construction of optimal feedback controllers	50
7. A variational approach to the Hamilton-Jacobi equations	54
8. Riccati equations	63
9. Stationary Hamilton-Jacobi equations	70
10. References	84

CHAPTER 3 EXISTENCE THEORY IN NONCONVEX CLASSES

1. Introduction	87
2. A direct approach to Hamilton-Jacobi equations in a nonconvex class of solutions	88
3. Applications to synthesis of optimal controls	100
4. A variational approach. Generalized solutions	111
5. Stationary Hamilton-Jacobi equations and control problems with infinite time horizon	127
6. Galerkin approximation of solutions	138
7. References	144

CHAPTER 4 THE DYNAMIC PROGRAMMING EQUATION FOR STOCHASTIC OPTIMAL CONTROL

1. Introduction	145
2. Notations and assumptions	147
3. The linearized problem	149
4. Existence results	153
5. Synthesis of optimal control	163
6. Linear quadratic control	167
7. References	172
