CONTENTS

A. Some basic concepts and developments in Sobolev triples 1

I. CARLEMAN OPERATORS 3
I.1. Some measure theoretical prerequisites 3
I.2. Carleman operators 8
I.3. Operators of Carleman type 13
I.4. Strong Carleman operators 19
Some bibliographical notes and comments 22

II. A MEASURE THEORETICAL SOBOLEV LEMMA 23
II.1. An elementary illustration 24
II.2. Sobolev triples of Hilbert spaces 28
II.3. Federer measure spaces 30
II.4. A measure theoretical generalization of the Sobolev embedding theorem 38
II.5. Some applications 44
Some bibliographical notes and comments 50

III. DIRAC BASES 53
III.1. The concept of Dirac basis 55
III.2. Canonical Dirac bases 64
III.3. Dirac-Riesz bases 69
III.4. Canonical Dirac-Riesz bases 74
Some bibliographical notes and comments 79

IV. THE GENERALIZED EIGENVALUE PROBLEM FOR SELF-ADJOINT OPERATORS 81
IV.1. Commutative multiplicity theory 82
IV.2. An application of the measure theoretical Sobolev lemma 90
IV.3. A solution 95
IV.4. Some illustrations 101
Some bibliographical notes and comments 107

V. DIRECT RESOLUTIONS IN SOBOLEV TRIPLES 109
V.1. Preliminaries and summary 109
V.2. Direct resolutions of the identity 113
V.3. A general construction of a direct resolution 119

V.4. Equivalence classes of direct resolutions, canonical direct resolutions 125
V.5. Generalized eigenprojections related to commutative von Neumann algebras 132
Some bibliographical notes and comments 145

B. A theory of generalized functions 147

I. ANALYTICITY SPACES, TRAJECTORY SPACES AND THEIR DUALITY 149
I.1. The analyticity space $S_{X,A}$ 150
I.2. The trajectory space $T_{X,A}$ 163
I.3. Pairing and duality of $S_{X,A}$ and $T_{X,A}$ 171
I.4. Sequence space representation 178
Some bibliographical notes and comments 181

II. LINEAR MAPPINGS, TENSOR PRODUCTS AND KERNEL THEOREMS 183
II.1. Continuous linear mappings between analyticity and trajectory spaces 183
II.2. Topological tensor products of analyticity and trajectory spaces 193
II.3. Kernel theorems 202
II.4. Matrix representations 208
Some bibliographical notes and comments 216

III. ILLUSTRATIONS OF ANALYTICITY SPACES AND TRAJECTORY SPACES 217
III.1. Analyticity spaces based on the Laplacian operator 217
III.2. The spaces S_{α}^{β} of Gelfand and Shilov 229
III.3. Analyticity spaces based on classical polynomials 234
III.4. Analyticity spaces related to unitary representations of Lie groups 245
Some bibliographical notes and comments 250

IV. THE CONCEPT OF DIRAC BASIS LIFTED TO TRAJECTORY SPACES 253
IV.1. A measure theoretical Sobolev lemma for analyticity spaces 253
IV.2. Dirac bases in trajectory spaces 258
IV.3. Canonical Dirac bases in trajectory spaces 267
IV.4. The generalized eigenvalue problem for self-adjoint operators solved in the setting of trajectory spaces 271

Some bibliographical notes and comments 280

C. A mathematical interpretation of Dirac's formalism 281

I. DIRAC'S FORMALISM ACCORDING TO DIRAC AND ITS RELATIONS WITH LINEAR ALGEBRA 285

I.1. Some elementary concepts of linear algebra 285

I.2. Dirac's formalism according to Dirac 291

Some bibliographical notes and comments 308

II. A MATHEMATICAL INTERPRETATION OF DIRAC'S BRACKET FORMALISM 309

i. Kets 310

ii. Bras 313

iii. Brackets 316

iv. Linear operators 321

v. Dirac bases 325

vi. Representatives of kets and bras 332

vii. Representatives of linear operators 338

viii. Observables 351

ix. The harmonic oscillator 353

x. Angular momenta 359

Some bibliographical notes and comments 365

III. THE FREE FIELD OPERATOR FORMALISM 367

III.1. The Fock space 376

III.2. Required mathematical tools 389

III.3. Annihilation and creation operators 400

III.4. The free field formalism 406

Some bibliographical notes and comments 413
