

TABLE OF CONTENTS

CHAPTER 0 PRELIMINARIES	1
0.1. Notations and Terminology	1
0.2. Vector Spaces	2
0.3. Sequences	3
0.4. Some Results of Integration	4
0.4.1. Set of measure zero on the line \mathbb{R}	5
0.4.2. The saw-tooth function	5
CHAPTER 1 FINITE PARTS OF INTEGRALS	7
1.1. Definition	7
1.2. Extensions of the Definition	9
1.3. Integration by Parts	10
1.4. Analytic Continuation	12
1.5. Representations of Finite Parts on the Real Axis by Analytic Functions in the Complex Plane	15
1.6. Change of Variable	17
CHAPTER 2 BASE SPACES	19
2.1. Base Spaces	19
2.2. The Space \mathbb{D}	19
2.3. The Space \mathbb{D}^k ($k \geq 0$)	20
2.4. The Space \mathfrak{F} (Functions of Rapid Descent)	20
2.5. The Space \mathfrak{E}	21
2.6. The Space \mathbb{Z} (of Entire Functions)	21
2.7. Inclusions	21
2.8. The Space Φ	22
2.9. The Space $\Phi(\mathbb{R}^n)$	23
CHAPTER 3 DEFINITION OF DISTRIBUTIONS	25
3.1. Generalized Functions	25
3.1.1. Inclusion of Φ'	26
3.2. Distributions	27

3.2.1. Inclusions	27
3.3. Examples of Distributions	27
3.3.1. Regular distributions	27
3.3.2. Irregular distributions	28
3.3.3. Pseudo functions	29
3.3.4. Regular tempered distributions	30
3.3.5. Tempered pseudo functions	30
3.3.6. Analytic functionals (ultradistributions)	31
CHAPTER 4 PROPERTIES OF GENERALIZED FUNCTIONS AND DISTRIBUTIONS	35
4.1. Support	35
4.1.1. Point support	36
4.1.2. Distributions with lower bounded support	36
4.1.3. Distributions with bounded support	37
4.2. Properties	37
4.2.1. Boundedness	37
4.3. Convergence	38
4.3.1. Completeness and limit	39
4.3.2. Particular cases of convergence in \mathbb{D}'	39
4.3.3. Convergence in \mathfrak{F}'	40
4.3.4. Convergence to $\delta(x)$	40
4.4. Approximation of Distributions by Regular Functions	41
4.5. Distributions in Several Variables	42
CHAPTER 5 OPERATIONS ON GENERALIZED FUNCTIONS AND DISTRIBUTIONS	47
5.1. Transpose of an Operation	47
5.2. Translation	48
5.3. Product by a Function	49
5.3.1. The space $M(\emptyset)$ and the general definition of product	50
5.3.2. Distributions belonging to \mathbb{D}' or \mathfrak{F}'	50
5.3.2.1. Distributions of finite order	51
5.3.3. Tempered distributions	51
5.3.4. Ultradistribution	51
5.4. Differentiation	52
5.4.1. General outline	52
5.4.2. Remark	52
5.4.3. Distributions of finite order having bounded support	53

5.4.4. Derivatives of the Dirac distribution	53
5.4.5. Derivatives of a regular distribution	54
5.4.6. Derivatives of pseudo functions	57
5.4.7. Derivatives of ultradistributions	59
5.5. Differentiation of Product	59
5.6. Differentiation of Limit and Series	61
5.7. Derivatives in the Case of Several Variables	62
5.7.1. Generalization of $\delta'(x)$	63
5.7.2. The Laplacian	64
5.8. Convolution	65
5.8.1. General definition	65
5.8.2. Convolution in \mathbb{D}'	65
5.8.3. Examples	66
5.8.4. Convolution in \mathbb{D}'_+	68
5.8.5. Convolution in \mathfrak{s}'	70
5.8.5.1. Convolution in \mathfrak{s}'_+	71
5.8.6. Convolution equations	71
5.8.7. Fundamental solution	71
5.9. Transformation of the Variable	72
5.9.1. Definition of $T_u(x)$	72
5.9.2. Examples	74
5.9.3. Bibliography	75
CHAPTER 6 OTHER OPERATIONS ON DISTRIBUTIONS	77
6.1. Division	77
6.1.1. Division by x^n ($n > 0$, an integer)	77
6.1.2. Division by a function	78
6.1.3. $\frac{1}{\alpha(x)}$ multiplier for ϕ	79
6.2. Antidifferentiation	80
6.2.1. Antiderivative in \mathbb{D}'_+	81
6.3. Value and Limit at a Point of a Distribution	82
6.3.1. Value at a point	82
6.3.2. Right and left hand limits at a point	83
6.3.3. Limit at infinity	84
6.4. Equivalence	85
6.4.1. Equivalence at the origin	85
6.4.2. Equivalence at infinity	88
CHAPTER 7 THE FOURIER TRANSFORMATION	91
7.1. Fourier Transformation on \mathbb{Z}	91
7.2. Fourier Transformation on \mathbb{D}	93

7.3. Fourier Transformation on \mathbb{D}' and \mathbb{Z}'	94
7.4. Inversion and Convergence	94
7.4.1. Inversion of Fourier transformation on \mathbb{D}' and \mathbb{Z}'	94
7.4.2. Convergence	95
7.5. Rules	96
7.6. Fourier Transformation on \mathcal{E}'	96
7.7. Examples	97
7.8. Fourier Transformation on \mathcal{S} and \mathcal{S}'	99
7.9. Particular Cases	100
7.10. Examples	101
7.11. The Spaces $C(\mathbb{R})$ and $M(\mathbb{R})$ of Fourier Transformation	101
7.12. The Fourier Transformation of Convolution and Multiplication	102
7.13. Applications	103
7.14. Bibliography	105
CHAPTER 8 THE LAPLACE TRANSFORMATION	107
8.1. Laplace Transformability	108
8.2. Laplace Transform	109
8.2.1. Case for functions	110
8.3. Characterization of Laplace Transform	110
8.4. Relation with the Fourier Transformation	113
8.5. Principal Rules	113
8.5.1. Case for functions	115
8.6. Convergence and Series	116
8.6.1. Examples	117
8.7. Inversion of the Laplace Transformation	118
8.7.1. Example	120
8.8. Reciprocity of the Convergence	120
8.8.1. Corollary in series	121
8.8.2. Examples	121
8.9. Differentiation with Respect to a Parameter	122
8.10. Laplace Transformation of Pseudo Functions	124
8.10.1. Derivative and primitive	124
8.10.2. Use of analytic continuation	125
8.10.3. Change of x to ax , a being complex	127
8.10.4. Change of x to ix	129
8.10.5. Convergence	131
8.11. Abelian Theorems	132
8.11.1. Behaviour of the transform at infinity	132

8.11.2. Behaviour of the transform near a singular point	134
8.12. Tauberian Theorems	136
8.12.1. Behaviour near the lower bound of the support	136
8.13. The n-Dimensional Laplace Transformation	138
8.13.1. The Laplace transformation in n variables	139
8.13.2. Convolution	140
8.14. Bibliography	143
CHAPTER 9 APPLICATIONS OF THE LAPLACE TRANSFORMATION	145
9.1. Convolution Equations	145
9.1.1. Examples	146
9.2. Differential Equations with Constant Coefficients	148
9.2.1. Solving distribution-derivative equations	148
9.2.2. Solving traditional differential equations	151
9.2.3. Single differential equations (Cauchy problems)	152
9.2.4. Systems of differential equations	154
9.3. Differential Equations with Polynomial Coefficients	155
9.3.1. Reduction of order	156
9.4. Integral Equations	160
9.4.1. Special Volterra equations	161
9.4.2. Resolvent series	162
9.4.3. Remark on uniqueness	164
9.4.4. Integral equations with polynomial coefficients	164
9.5. Integro-Differential Equations	166
9.6. General Concept of Green's Functions	168
9.6.1. Statement	168
9.6.2. Green's kernel	169
9.6.3. Examples	173
9.6.4. Integral equations	176
9.7. Partial Differential Equations	177
9.7.1. Diffusion of heat flow in rods	177
9.7.1.1. Infinite conductor without radiation	177
9.7.1.2. The cooling of a rod of finite length	179

9.7.1.3. Rod heated at an extremity	180
9.7.2. Vibrating strings	182
9.7.3. The telegraph equation	187
9.7.3.1. The lines without leakage which are closed by a resistance	187
9.7.3.2. The infinite line which is perfectly isolated	189
9.8. Convolution Formulae	190
9.9. Expansion in Series	193
9.9.1. Function $B(v, z)$	193
9.9.2. Function $\psi(z)$	194
9.9.3. Fourier series	194
9.9.4. Asymptotic expansions	196
9.10. Derivatives and Anti-Derivatives of Complex Order	198
9.10.1. Definition by the Laplace transformation	198
9.10.2. Examples	200
9.10.3. Extension of the definition	203
CHAPTER 10 THE STIELTJES TRANSFORMATION	207
10.1. The Spaces $E(r)$ and $\Pi'(r)$	207
10.1.1. The space $E(r)$	207
10.1.2. The space $\Pi'(r)$	209
10.2. The Stieltjes Transformation	209
10.3. Iteration of the Laplace Transformation	210
10.4. Characterization of Stieltjes Transforms	211
10.5. Examples of Stieltjes Transforms	213
10.5.1. Examples when $T_t \in \Pi'(r)$	213
10.5.2. Examples when $T_t \in \Pi'$	215
10.6. Inversion	216
10.7. Abelian Theorems	219
10.7.1. Behaviour of the transform near the origin	219
10.7.2. Behaviour of the transform at infinity	220
10.8. The n-Dimensional Stieltjes Transformation	221
10.8.1. The space $J_n'(r)$	221
10.8.2. The Stieltjes transformation in n variables	222
10.8.3. The iteration of the Laplace transformation	222
10.8.4. Inversion	224

10.9. Applications	224
10.10. Bibliography	224
CHAPTER 11 THE MELLIN TRANSFORMATION	227
11.1. Mellin Transformation of Functions	228
11.2. The Spaces $E_{\alpha, \omega}$	230
11.3. The Spaces $E'_{\alpha, \omega}$	232
11.3.1. The multiplication in $E'_{\alpha, \omega}$	234
11.3.2. The differentiation in $E'_{\alpha, \omega}$	234
11.3.3. Comparison with Zemanian spaces	235
11.4. The Mellin Transformation	236
11.5. Examples of Mellin Transforms	237
11.6. Characterization of Mellin Transformation	238
11.7. Rules of Calculus	241
11.8. Mellin and Laplace Transformations	242
11.9. Mellin and Fourier Transformations	244
11.10. Inversion of the Mellin Transformation	245
11.11. The Mellin Convolution	249
11.11.1. Examples and particular cases	250
11.11.2. Relation with the Mellin transformation	251
11.11.3. Relation with the ordinary convolution	251
11.11.4. The operator $(tD)^\nu$	252
11.12. Abelian Theorems	253
11.13. Solution of Some Integral Equations	258
11.14. Euler-Cauchy Differential Equations	261
11.15. Potential Problems in Wedge Shaped Regions	265
11.16. Bibliography	268
CHAPTER 12 HANKEL TRANSFORMATION AND BESSEL SERIES	269
12.1. Hankel Transformation of Functions	269
12.2. The Spaces H_ν and H'_ν	272
12.3. Operations on H_ν and H'_ν	274
12.4. Hankel Transformation of Distributions	276
12.4.1. The Hankel transformation on $\mathcal{E}'(I)$	280
12.5. Some Rules	282
12.5.1. Transform formulae for H_ν	282
12.5.2. Transform formulae for H'_ν	283
12.6. Inversion	284
12.6.1. Remarks	286
12.7. The n-Dimensional Hankel Transformation	287

12.7.1. The spaces of h_μ and h'_μ	288
12.7.2. Operations on h_μ and h'_μ	290
12.7.3. The Hankel transformation in n -variables	291
12.8. Variable Flow of Heat in Circular Cylinder	295
12.9. Bessel Series for Generalized Functions	297
12.9.1. Statement	297
12.10. The Space $B_{m,v}$	298
12.11. Representation of a Distribution by its Fourier Bessel Series	300
12.12. Other Properties of the Fourier-Bessel Series	302
12.13. The Subspace B_m of $B_{m,v}$	304
12.14. Bessel-Dini Series	307
12.14.1. Statement	307
12.15. The Space $B_{H,m,v}$	309
12.16. Representation of a Distribution by its Bessel-Dini Series	310
12.16.1. The subspace B_m of $B_{H,m,v}$	311
12.16.2. Another subspace of $B_{H,m,v}$	311
12.17. An Application of the Bessel-Dini Series	311
12.18. Bibliography	314
BIBLIOGRAPHY	315
INDEX OF SYMBOLS	329
AUTHOR INDEX	331
