

CONTENTS

<i>Preface</i>	vii
1 Introduction	
1 Test functions	2
2 Three modes for the evaluation of functions	4
3 Distributions	8
4 Outline of further developments	11
2 The elements of distribution theory	14
Part 1 Basic definitions and facts	14
Part 2 Convolutions	21
1 Convolution of test functions	22
2 Convolution of a distribution and a test function	25
3 Convolution of distributions	29
3 Examples of distributions	33
1 The finite difference calculus	33
2 Dipoles, quadrupoles, 2^n -ipoles	35
3 Pseudofunctions	38
4 Fourier transforms	42
1 The physical interpretation of complex numbers	42
2 The Fourier transform	45
3 Properties of the Fourier transform	50
5 Tempered distributions	58
1 Basic definitions and facts	60
2 Examples	67
3 Bochner's Theorem	74
4 Fourier series	77
5 Further examples – Fourier series	85
6 Extension to higher dimensions	89
1 Multi-indices	89
2 Fourier transforms on \mathbb{R}^q	94

3	Tempered distributions on \mathbb{R}^q	94
4	General distributions on \mathbb{R}^q	101
7	A general definition of multiplication and convolution for distributions	104
1	Introduction	104
2	Distributions depending on a parameter	107
3	Tensor products	108
4	Localization and partial integration	111
5	Multiplication and convolution	120
6	Examples	124
7	The Fubini Theorem and related results	131
	Appendix 1 Partitions of unity	135
	Appendix 2 The Structure Theorem	137
	Appendix 3 Proof of Theorems A and B from Chapter 7	141
	<i>Bibliography</i>	144
	<i>Index</i>	146
