Preface xi
Acknowledgments xv

CHAPTER 1. **Vector-Valued Functions**

1.1. Introduction 1
1.2. Notations and Terminology 2
1.3. Continuous Functions 5
1.4. Integration 6
1.5. Repeated Integration and Improper Integrals 9
1.6. Differentiation 12
1.7. Banach-Space-Valued Analytic Functions 17
1.8. Contour Integration 20

CHAPTER 2. **Integration with Vector-Valued Functions and Operator-Valued Measures**

2.1. Introduction 23
2.2. Operator-Valued Measures 23
2.3. σ-Finite Operator-Valued Measures 29

2.4. Tensor Products and Vector-Valued Functions 34
2.5. Integration of Vector-Valued Functions 38
2.6. Sesquilinear Forms Generated by PO Measures 43

CHAPTER 3. **Banach-Space-Valued Testing Functions and Distributions**

3.1. Introduction 49
3.2. The Basic Testing-Function Space $\mathscr{D}^m(A)$ 50
3.3. Distributions 52
3.4. Local Structure 57
3.5. The Correspondence between $[\mathscr{D}(A); B]$ and $[\mathscr{D}; [A; B]]$ 61
3.6. The ρ-Type Testing Function Spaces 64
3.7. Generalized Functions 67
3.8. L_p-Type Testing Functions and Distributions 72

CHAPTER 4. **Kernel Operators**

4.1. Introduction 76
4.2. Systems and Operators 77
4.3. The Space $\mathscr{H} = \mathscr{D}(\mathscr{V})$ 81
4.4. The Kernel Theorem 85
4.5. Kernel Operators 89
4.6. Causality and Kernel Operators 93

CHAPTER 5. **Convolution Operators**

5.1. Introduction 96
5.2. Convolution 97
5.3. Special Cases 98
5.4. The Commutativity of Convolution Operators with Shifting and Differentiation 104
5.5. Regularization 105
5.6. Primitives 108
5.7. Direct Products 110
5.8. Distributions That Are Independent of Certain Coordinates 110
5.9. A Change-of-Variable Formula 111
5.10. Convolution Operators 112
5.11. Causality and Convolution Operators 115

CHAPTER 6. **The Laplace Transformation**

6.1. Introduction 117
6.2. The Definition of the Laplace Transformation 117

6.3. Analyticity and the Exchange Formula 119
6.4. Inversion and Uniqueness 120
6.5. A Causality Criterion 121

CHAPTER 7. **The Scattering Formulism**

7.1. Introduction 124
7.2. Preliminary Considerations Concerning L_p-Type Distributions 125
7.3. Scatter-Passivity 128
7.4. Bounded* Scattering Transforms 131
7.5. The Realizability of Bounded* Scattering Transforms 134
7.6. Bounded*-Real Scattering Transforms 137
7.7. Lossless Hilbert Ports 139
7.8. The Lossless Hilbert n-Port 143

CHAPTER 8. **The Admittance Formulism**

8.1. Introduction 149
8.2. Passivity 150
8.3. Linearity and Semipassivity Imply Continuity 153
8.4. The Fourier Transformation on $\mathscr{S}(H)$ 155
8.5. Local Mappings 157
8.6. Positive Sesquilinear Forms on $\mathscr{Q} \times \mathscr{Q}$ 160
8.7. Positive Sesquilinear Forms on $\mathscr{D}(H) \times \mathscr{D}(H)$ 162
8.8. Certain Semipassive Mappings of $\mathscr{D}(H)$ into $\mathscr{E}(H)$ 168
8.9. An Extension of the Bochner–Schwartz Theorem 174
8.10. Representations for Certain Causal Semipassive Mappings 175
8.11. A Representation for Positive* Transforms 178
8.12. Positive* Admittance Transforms 183
8.13. Positive* Real Admittance Transforms 186
8.14. A Connection between Passivity and Semipassivity 187
8.15. A Connection between the Admittance and Scattering Formulisms 189
8.16. The Admittance Transform of a Lossless Hilbert Port 192

APPENDIX A. **Linear Spaces** 194

APPENDIX B. **Topological Spaces** 198

APPENDIX C. **Topological Linear Spaces** 201

APPENDIX D. **Continuous Linear Mappings** 206

APPENDIX E. **Inductive-Limit Spaces** 211

APPENDIX F. **Bilinear Mappings and Tensor Products** 213

APPENDIX G. **The Bochner Integral** 216
