

TABLE OF CONTENTS

PREFACE		v
CHAPTER 1. CLASSICAL IDEAS AND PROBLEMS		
1. Introduction		1
2. Some preliminary variational ideas		2
3. Various differential equations and their origins		10
4. Linear second order PDE		16
5. Further topics in the calculus of variations		25
6. Spectral theory for ordinary differential operators, transmutation, and inverse problems		35
7. Introduction to classical mechanics		49
8. Introduction to quantum mechanics		57
9. Weak problems in PDE		65
10. Some nonlinear PDE		74
11. Ill posed problems and regularization		86
CHAPTER 2. SCATTERING THEORY AND SOLITONS		
1. Introduction		99
2. Scattering theory I (operator theory)		101
3. Scattering theory II (3-D)		108
4. Scattering theory III (a medley of themes)		119
5. Scattering theory IV (spectral methods in 3-D)		137
6. Systems and half line problems		147
7. Relations between potentials and spectral data		168
8. Introduction to soliton theory		183
9. Solitons via AKNS systems		192
10. Soliton theory (Hamiltonian structure)		201
11. Some topics in integrable systems		211
CHAPTER 3. SOME NONLINEAR ANALYSIS: SOME GEOMETRIC FORMALISM		
1. Introduction		227
2. Nonlinear analysis		227

3. Monotone operators	238
4. Topological methods	252
5. Convex analysis	264
6. Nonlinear semigroups and monotone sets	272
7. Variational inequalities	281
8. Quantum field theory	286
9. Gauge fields (physics)	294
10. Gauge fields (mathematics) and geometric quantization	301
APPENDIX A. INTRODUCTION TO LINEAR FUNCTIONAL ANALYSIS	311
APPENDIX B. SELECTED TOPICS IN FUNCTIONAL ANALYSIS	329
APPENDIX C. INTRODUCTION TO DIFFERENTIAL GEOMETRY	351
REFERENCES	377
INDEX	393
