Preface

I. Introduction 1

II. Statement of the inverse problems 3

- §1. Inverse scattering by a potential 3
- §2. Inverse scattering by an inhomogeneity 12
- §3. Inverse scattering by an obstacle 18
- §4. Inverse source problems 19
- §5. Some inverse problems for elliptic, parabolic and hyperbolic equations 23
- §6. Phase retrieval problem (PRP) 27
- §7. Applications 27

III. Uniqueness theorems 31

- §1. A general method based on completeness of the set of products of solutions to PDE: property C 31
- §2. Property C for some PDE with variable coefficients 45
- §3. Uniqueness theorems for inverse scattering by a potential 61
- §4. Uniqueness of the solution to impedance tomography problem 72
- §5. Uniqueness theorems for inverse spectral problems 81
- §6. Uniqueness theorems for inverse scattering by inhomogeneities 85
- §7. Some inverse problems for a layered medium 91
- §8. Uniqueness theorems for inverse scattering by obstacles 99
- §9. Uniqueness theorems for an inverse problem for hyperbolic equations 100
- §10. Uniqueness theorems for inverse problems for Maxwell's equations 106

- §11. Some L^s estimates and their applications to uniqueness problems 112

- IV. Analytical solution to some inverse problems 116**
 - §1. Inversion of fixed-frequency scattering data 116
 - §2. Inversion of fixed-frequency surface data 124
 - §3. Reconstruction of the surface from high-frequency scattering data 126
 - §4. Necessary and sufficient conditions for scatterers to be spherically symmetric 130
 - §5. Inversion of low-frequency data 136
 - §6. Continuation of the data 162

- V. Numerical methods for solving inverse problems 166**
 - §1. Numerical method for inverse potential scattering with fixed-energy data 166
 - §2. Numerical methods for inverse scattering by obstacles 178
 - §3. Numerical methods for inverse scattering by inhomogeneities 189
 - §4. Analysis of and error estimates for the Born inversion 190
 - §5. Numerical methods for inverse potential scattering based on recovery of the Dirichlet-to-Neumann map 196

- VI. Related problems of signal processing 201**
 - §1. Recovery of signals from incomplete and noisy data 201
 - §2. Recovery of signals from discrete and noisy data 209
 - §3. Inversion of the Laplace transform 218
 - §4. Inversion of the Radon transform with incomplete data 222

- VII. Three-dimensional inverse scattering problems 230**
 - §1. Reconstruction procedure based on a Marchenko equation 230
 - §2. Other reconstruction procedures 233
 - §3. Characterization of the scattering data 234
 - §4. Algorithmically verifiable characterization of the scattering data and solution to the inverse scattering problem for small potentials 241
 - §5. Characterization of the scattering data in the inverse problem of scattering by obstacles 247

- VIII. One-dimensional inverse problems 249**
 - §1. Inverse spectral problems 249
 - §2. Inverse scattering on a half-line 263

- §3. Inverse scattering on the whole line 284
- §4. Inversion of the I -function 288
- §5. The inverse problem on a finite interval 292
- §6. The inverse nodal problem 294
- §7. Numerical solutions of inverse problems 296

IX. Other results 303

- §1. Inverse source problems 303
- §2. Phase retrieval problem (PRP) 313
- §3. Carleman estimates and inverse problems 314
- §4. An integral geometry problem and the uniqueness of the solution to some Darboux and Goursat type problems 317

Appendix 1: Low frequency asymptotics 324

- §1. Introduction 324
- §2. Integral equation method for the Dirichlet problem 326
- §3. Integral equation method for the Neumann problem 332
- §4. The Robin problem 333
- §5. The method based on the Fredholm property 340
- §6. The method based on the maximum principle 345

Appendix 2: Stability of the solution to the 3D fixed-energy inverse scattering problem 349

- §1. Introduction 349
- §2. Stability estimates 353
- §3. Stability estimates for exact data 354

Open problems 355

Bibliographical notes 358

List of symbols 361

Table of inverse problems 363
