

Contents

1	Introduction	2
2	Inverse Problems Modeled by Integral Equations of the First Kind: Causation	5
2.1	Some Models	6
2.2	Integral Equations of the First Kind	35
2.3	Bibliographic Notes	39
3	Parameter Estimation in Differential Equations: Model Identification	41
3.1	An Exponential Growth Model	43
3.2	A Problem in Hydraulics	45
3.3	Compartmental Analysis	49
3.4	Structural Dynamics	56
3.5	Diffusion Coefficients	61
3.6	Forcing Terms	63
3.7	Bibliographic Notes	65
4	Mathematical Background for Inverse Problems	67
4.1	A Function Space Précis	67
4.2	Some Operator Theory	71
4.3	Ill-Posed Operator Equations	79
4.4	Bibliographic Notes	83
5	Some Methodology for Inverse Problems	84
5.1	The Method of Regularization	84
5.2	Discretization Methods	91
5.3	Iterative Methods	96
5.4	TSVD	100
5.5	The Maximum Entropy Method	102
5.6	The Backus-Gilbert Method	108
5.7	ART	112
5.8	Ouput Least Squares	116
5.9	Bibliographic Notes	119
6	An Annotated Bibliography on Inverse Problems	121
