

TABLE OF CONTENTS

	<u>page</u>
I. Spectral Representation	1
1. Three typical problems	1
2. Linear space and functional representation. Linear operators	12
3. Spectral representation	16
4. Functional calculus	22
5. Differential equations	24
II. Norm and Inner Product	31
6. Normed spaces	31
7. Inner product	35
8. Inner products in function spaces	38
9. Formally self-adjoint operators	46
10. Adjoint operators in function spaces	50
11. Orthogonality	54
12. Orthogonal projection	55
13. Remarks about the role of self-adjoint operators in physics	58
III. Hilbert Space	64
14. Completeness	64
15. First extension theorem. Ideal functions	69
16. Fourier transformation	78
17. The projection theorem	85
18. Bounded forms	91
IV. Bounded Operators	
19. Operator inequalities, operator norm, operator convergence	95
20. Integral operators	103
21. Functions of bounded operators	116
22. Spectral representation	132
23. Normal and unitary operators	140
V. Operators with Discrete Spectra	143
24. Operators with partly discrete spectra	143
25. Completely continuous operators	147
26. Completely continuous integral operators	152
27. Maximum-minimum properties of eigenvalues	157

	<u>page</u>
VI. Non-Bounded Operators	163
28. Closure and adjointness	163
29. Closed forms	169
30. Spectral resolution of self-adjoint operators	174
31. Closeable forms	180
VII. Differential Operators	186
32. Regular differential operators	186
33. Ordinary differential operators in a semi-bounded domain	192
34. Partial differential operators	197
35. Partial differential operators with boundary conditions	201
36. Partial differential operators with discrete spectra	206
VIII. Perturbation of Spectra	213
37. Perturbation of discrete spectra	213
38. Perturbation of continuous spectra	222
39. Scattering	237
