Introduction	v
CHAPTER 5	
Spatial numerical ranges	
15. Some elementary observations on the spatial numerical range	1
16. The Bishop-Phelps-Bollobás theorem	6
17. Some numerical range applications of the Bishop-Phelps-Bollobás theorem	11
18. The dependence of $\Pi(X)$ on the norm	13
19. A theorem of Zenger	18
20. Eigenvalues in the boundary of the numerical range	24
21. Absolute norms on \tilde{C}^2	35
CHAPTER 6	
Algebra numerical ranges	
22. Some elementary observations on the algebra numerical range	42
23. Mapping theorems for numerical ranges	45
24. The extremal algebra $Ea(K)$	53
25. Other extremal algebras	65
26. Properties of Hermitian elements	72
27. Banach algebras generated by a Hermitian element	78
28. Compact Hermitian operators	82
29. Examples of Hermitian elements	88
30. The Russo-Dye-Palmer theorem	97

31.	The linear spans of the states	100
32.	Numerical index	111
33.	Spectral operators	119

CHAPTER 7

Further ranges

34.	Essential numerical ranges	127
35.	Joint numerical ranges	134
36.	Matrix ranges	138
37.	Some axioms for numerical ranges of operators	159
