

## PART I PRELIMINARIES

1	Set theory	3
2	Linear algebra	12
3	General topology	32
4	Metric spaces	56
5	Complex analysis	70
6	Measurability	102
7	Integrals and measures	113
8	Measure theory	136
9	More integration theory	164
10	Measure and topology	193

## PART II BANACH SPACES

11	Normed linear spaces	211
12	Bounded linear transformations	248
13	The open mapping theorem	272
14	The Hahn–Banach theorem	283
15	Local convexity and weak topologies	311
16	Duality	337
17	Banach spaces and integration theory	364
18	The spaces $\mathcal{C}(X)$	406

## Contents

19	Vector sums and bases	428
	Bibliography	451
	Index	455
	References to the examples, propositions, and problems	469
