

TABLE OF CONTENTS

INTRODUCTION	<i>xi</i>
CHAPTER I. HILBERT SPACES	1
1. Complex n -space	1
2. The Hilbert space ℓ_2	3
3. Definition of Hilbert space and its elementary properties	5
4. Distance from a point to a finite dimensional subspace	10
5. The Gram determinant	12
6. Incompatible systems of equations	16
7. Least squares fit	17
8. Distance to a convex set and projections onto subspaces	19
9. Orthonormal systems	21
10. Legendre polynomials	22
11. Orthonormal Bases	25
12. Fourier series	28
13. Completeness of the Legendre polynomials	30
14. Bases for the Hilbert space of functions on a square	31
15. Stability of orthonormal bases	33
16. Separable spaces	34
17. Equivalence of Hilbert spaces	36
18. Example of a non separable space	37
EXERCISES I	38
 CHAPTER II. BOUNDED LINEAR OPERATORS ON HILBERT SPACES	 51
1. Properties of bounded linear operators	51
2. Examples of bounded linear operators with estimates of norms	53
3. Continuity of a linear operator	57
4. Matrix representations of bounded linear operators	58
5. Bounded linear functionals	60
6. Operators of finite rank	63
7. Invertible operators	65
8. Inversion of operators by the iterative method	70

9. Infinite systems of linear equations	72
10. Integral equations of the second kind	74
11. Adjoint operators	77
12. Self adjoint operators	80
13. Orthogonal projections	82
14. Compact operators	83
15. Invariant subspaces	88
EXERCISES II	91
CHAPTER III. SPECTRAL THEORY OF COMPACT SELF ADJOINT OPERATORS	105
1. Example of an infinite dimensional generalization	106
2. The problem of existence of eigenvalues and eigenvectors	106
3. Eigenvalues and eigenvectors of operators of finite rank	108
4. Theorem of existence of eigenvalues	110
5. Spectral theorem	113
6. Basic systems of eigenvalues and eigenvectors	115
7. Second form of the spectral theorem	118
8. Formula for the inverse operator	119
9. Minimum-Maximum properties of eigenvalues	121
EXERCISES III	125
CHAPTER IV. SPECTRAL THEORY OF INTEGRAL OPERATORS ..	131
1. Hilbert-Schmidt theorem	131
2. Preliminaries for Mercer's theorem	134
3. Mercer's theorem	136
4. Trace formula for integral operators	138
5. Integral operators as inverses of differential operators	139
6. Sturm-Liouville systems	142
EXERCISES IV	148
CHAPTER V. OSCILLATIONS OF AN ELASTIC STRING	153
1. The displacement function	153
2. Basic harmonic oscillations	155
3. Harmonic oscillations with an external force .	157

CHAPTER VI. OPERATIONAL CALCULUS WITH APPLICATIONS	159
1. Functions of a compact self adjoint operator	159
2. Differential equations in Hilbert space	165
3. Infinite systems of differential equations ...	167
4. Integro-differential equations	168
EXERCISES VI	170
CHAPTER VII. SOLVING LINEAR EQUATIONS BY ITERATIVE METHODS	173
1. The main theorem	173
2. Preliminaries for the proof	174
3. Proof of the main theorem	177
4. Application to integral equations	179
CHAPTER VIII. FURTHER DEVELOPMENTS OF THE SPECTRAL THEOREM	181
1. Simultaneous diagonalization	181
2. Compact normal operators	182
3. Unitary operators	184
4. Characterizations of compact operators	187
EXERCISES VIII	189
CHAPTER IX. BANACH SPACES	193
1. Definitions and examples	194
2. Finite dimensional normed linear spaces	196
3. Separable Banach spaces and Schauder bases ...	200
4. Conjugate spaces	201
5. Hahn-Banach theorem	203
EXERCISES IX	206
CHAPTER X. LINEAR OPERATORS ON A BANACH SPACE	211
1. Description of bounded operators	211
2. An approximation scheme	214
3. Closed linear operators	219
4. Closed graph theorem and its applications ...	221
5. Complemented subspaces and projections	224
6. The spectrum of an operator	226
7. Volterra Integral Operator	229
8. Analytic operator valued functions	231

EXERCISES X	232
CHAPTER XI. COMPACT OPERATORS ON A BANACH SPACES....	237
1. Examples of compact operators	237
2. Decomposition of operators of finite rank	240
3. Approximation by operators of finite rank	241
4. Fredholm theory of compact operators	242
5. Conjugate operators on a Banach space	245
6. Spectrum of a compact operator	248
7. Applications	251
EXERCISES XI	253
CHAPTER XII. NON LINEAR OPERATORS	255
1. Fixed point theorem	255
2. Applications of the contraction mapping theorem	256
3. Generalizations	261
APPENDIX 1. COUNTABLE SETS AND SEPARABLE HILBERT SPACES	265
APPENDIX 2. LEBESGUE INTEGRATION AND L_p SPACES ...	267
APPENDIX 3. PROOF OF THE HAHN-BANACH THEOREM	273
APPENDIX 4. PROOF OF THE CLOSED GRAPH THEOREM	277
