

# CONTENTS

<i>Preface</i> .....	v
----------------------	---

## PART I

### FUNCTIONAL ANALYSIS

1. Logical Foundations .....	1
2. Topological Considerations .....	1
3. Ways of Generating a Topology .....	3
4. Linear Topological Spaces .....	6
5. Convex Sets and the Hahn–Banach Theorem .....	8
6. Dual Variational Problems and the Foundations of Moment Problems. ....	13
7. Weak and Weak * Topologies .....	17
8. Extreme Points, Exposed Points, and the Liapunov Theorem	20
9. Finite-Dimensional Vector Space .....	32
10. Linear Differential Equations .....	36

## PART II

### LINEAR TIME OPTIMAL CONTROL

11. The General Linear Time Optimal Problem .....	43
12. General Properties of the Reachable Set and the Bang-Bang Principle .....	45
13. General Theorems on Optimal Control .....	48
14. Questions of Uniqueness and Properties of the Boundary of the Reachable Set .....	57

15. Unique Determination of the Control by the Necessary Condition. Normal Systems .....	62
16. Normality of Systems with Constant Coefficients .....	68
17. Sufficient Conditions for Optimal Control for a Special Problem. Proper Systems .....	71
18. Transversality and a Sufficient Condition for the General Problem. ....	86
19. Controllability with Unlimited Control .....	91

### PART III

#### NONLINEAR TIME OPTIMAL CONTROL

20. General Theory .....	105
21. Nonlinear Problems with Control Appearing Linearly .....	112
22. Two-Dimensional, Autonomous, Nonlinear Systems with Control Appearing Linearly .....	113
23. A Further Look at the Maximum Principle and Singular Arcs .....	128
REFERENCES .....	132
<i>Subject Index</i> .....	135
