

Contents

Chapter 1

§ 0. Operators	1
Test-functions and Operators	1
Convolution	3
Entering Functions	4
§ 1. Perfect Operators	10
Algebra of Perfect Operators	12
The Operator of an Entering Function	12
Translation Property	14
\mathcal{X} -functions	16
Numbers and Operators	19
Ratios of Perfect Operators	21

Chapter 2

§ 2. The Basic Facts	26
Translation Property	29
Numbers and Operators	31
Functions Having no Jumps on $[0, \infty)$	32
Various Consequences	33
Three Integral Equations	35
Differential Equations: Procedure	37
Higher Derivatives	40
Continuity of the Convolution Integral	43
§ 3. Elementary Applications	45
Table of Formulas	47
Illustrative Examples	51
§ 4. Partial Fraction Decomposition	56
Decompositions Obtained by Division	61
Heaviside's Expansion	63
Decomposition into Two Parts	66
Repeated Linear Factors	70
Heaviside Procedure	73
Repeated Quadratic and Linear Factors	75
Illustrative Examples	78

Chapter 3

§ 5. Further Applications	84
Series of Translates	92
Periodic Functions	97
Advantages of Operational Calculus	100
Use of Laplace Transform Tables	100
Difference Equations	101
Bibliographical Comments	102
Notes and Further Comments	103
§ 6. Calculus of Operators	107
Convergence	108
Value of an Operator at a Point	114
Integral of an Operator	117
Function-operators	120
Impulse and Dipole	122
Distributions and Operators	126
Two Examples	127
Multiplication by t	131
Static Deflection of Beams	134
§ 7. Vectors	144
Electric Circuits	148
The General Case	155
§ 8. Non-integrable Functions.	158
Convolution of Operators	161
Finite Part of a Divergent Integral	162
Indexed Functions	167
Derivatives on the Open Interval $(0, \infty)$	171
Duhamel's Formula	179

Chapter 4

§ 9. Partial Differential Equations	182
Differentiation with Respect to x	183
Vibrating String	187
A Diffusion Problem	190
Wave Problems	192
The Infinite Interval	194
Classical Solutions	197
The Finite Interval	201
§ 10. Diffusion Problems	213
The Infinite Interval	219
Insulated Rod	223
The Finite Interval	233
Comparison with the Laplace Transformation	237

Chapter 5

§ 11. Series of Operators	243
Series of Impulses	245
Analytic Functions of h/D	251
A Functional Calculus for h/D	256
Applications	260
Difference-differential Equations	264
§ 12. A Functional Calculus for D	269
Applications	277
§ 13. Non-linear Equations	282
Applications	285
§ 14. Differential Equations with Polynomial Coefficients.	292
Table of Formulas	300
Illustrative Examples	302

Appendix

§ 15. Theorems	308
Three Basic Theorems	311
A Theorem for § 6	318
A Theorem for § 9	319
A Theorem for § 11	322
Glossary of Terminology and Notations	327
Terminology	327
Notations	328
Summary of Results and Table of Formulas	331
Elementary Formulas	339
Periodic Functions	343
Bibliography	345
Bibliographical Comments	346
Subject and Author Index	347
