Preface xi

Introduction 1

Part I **OPERATOR THEORY IN HILBERT RESOLUTION SPACE**

1 Causality 7

A. Hilbert Resolution Space 7
B. Causal Operators 10
C. Anticausal and Memoryless Operators 15
D. The Integrals of Triangular Truncation 18
E. Integral Representation 24
Problems 28
References 29

2 Hypercausality 30

A. Strict Causality 30
B. Strong Strict Causality 37
C. Strong Causality 42
D. The Radical 45
Problems 50
References 51

3 Decomposition 52

A. Decomposition in $\mathscr{B}$ 52
B. Decomposition in $\mathscr{C}$ 58
C. Decomposition in $\mathscr{K}$ 75
Problems 80
References 81

4 Factorization 82

A. Regular Factorization 82
B. Radical Factorization 89
C. Compact Perturbations of the Identity 96
Problems 102
References 103

5 Causal Invertibility 104

A. Sufficient Conditions 104
B. Topological Techniques 109
Problems 114
References 115

Notes for Part I 116

References 129

Part II **STATE SPACE THEORY**

6 State Models 133

A. State Decomposition 133
B. Controllability and Observability 137
C. Characterization Theory 145
Problems 148
References 149

7 State Trajectory Factorization 150

A. State Trajectories 150
B. The State Trajectory Space 153
C. Lifting Theory 156
Problems 161
References 162

Notes for Part II 163

References 169

Part III **FEEDBACK SYSTEMS**

8 Feedback Models 173

A. Extension Spaces 173
B. Fractional Representation 180
C. Stability 190
D. Sensitivity 193
Problems 196
References 197

9 Asymptotic Design 198

A. Stabilization 198
B. Tracking 204
C. Disturbance Rejection 208
Problems 212
References 213

10 Optimal Control 214

A. A Basic Optimization Problem 214
B. The Servomechanism Problem 223
C. The Regulator Problem 228
Problems 231
References 232

Notes for Part III 233

References 240

Part IV **STOCHASTIC SYSTEMS**

11 Stochastic Optimization 245

A. Hilbert Space–Valued Random Variables 245
B. A Basic Stochastic Optimization Problem 252
C. Representation, Approximation, and Identification 259
Problems 261
References 261

12 Estimation and Control 262

A. Filtering and Prediction 262
B. Open Loop Servomechanisms 265
C. Closed Loop Servomechanisms 269
D. Stochastic Regulators 273
Problems 279
References 279

Notes for Part IV 280

References 288

Selected Bibliography 291

Index 305
