## Chapter 1. Shift Operators 1

1.1	Introduction	1
1.2	Partial Isometries	1
1.3	Wold Decomposition	2
1.4	Multiplicity	4
1.5	Universal Model	5
1.6	Analytic Operators	6
1.7	Inner Operators	7
1.8	Two Factorization Problems	8
1.9	Theorem. Solution of Problem 1	8
1.10	A Uniqueness Theorem	9
1.11	Counting Lemma	10
1.12	Beurling-Lax Theorem	11
1.13	Lifting Theorem	12
1.14	Theorem. Abstract Form of the Lifting Theorem	12
1.15	Concrete Realization of a Shift Operator	15
	Examples and Addenda	16
	Notes	21

## Chapter 2. Interpolation Theorems of the Pick-Nevanlinna and Loewner Types 22

2.1	Introduction	22
2.2	Nudel'man's Problem	22
2.3	Main Theorem	23
2.4	The Pick and Pick-Nevanlinna Theorems	25
2.5	Carathéodory-Fejér Theorem	26
2.6	Simultaneous Generalization of the Pick-Nevanlinna and Carathéodory- Fejér Theorems	27
2.7	Restrictions of Boundary Functions	30
2.8	Pick Class	34
2.9	Generalized Loewner Theorem	34
2.10	Hilbert Transforms	35
2.11	Equivalent Form of the Generalized Loewner Theorem	36
2.12	Real Valued Functions and Loewner's Theorem	37
2.13	Imaginary Functions and a Dual Result	39
	Examples and Addenda	41
	Notes	45

## Chapter 3. Factorization of Toeplitz Operators 47

3.1	Introduction	47
3.2	Operator Matrices	48
3.3	Lowdenslager's Isometry	50
3.4	Theorem. Solution of the Abstract Szegő Problem	50
3.5	Uniqueness Theorems	52
3.6	Theorem. Inner-Outer Factorization of Toeplitz Operators	53
3.7	Theorem. Factorization of Nonnegative Invertible Toeplitz Operators	54

3.8 Comparison Theorem	54
3.9 Scalar Analytic Operators	55
3.10 Extremal Properties of Outer Operators	55
3.11 Proofs	56
Examples and Addenda	59
Notes	73

## Chapter 4. Nevanlinna and Hardy Classes of Vector and Operator Valued Functions     74

4.1 Introduction	74
4.2 Nevanlinna and Hardy-Orlicz Classes	74
4.3 The Cases $\Omega = D$ and $\Pi$ ; Characterizations of the Classes	77
4.4 Hardy Classes	79
4.5 The Cases $X = \mathcal{C}$ and $\mathcal{B}(\mathcal{C})$ ; Fatou's Theorem for Bounded Functions	81
4.6 Boundary Behavior of Functions of Bounded Type	84
4.7 Hardy Classes on the Disk	88
4.8 Hardy Classes on the Half-Plane	90
Examples and Addenda	92
Notes	93

## Chapter 5. Operator Valued Inner and Outer Functions     94

5.1 Introduction	94
5.2 Inner and Outer Functions	94
5.3 The Subspace $M_{\text{in}}(A)$	96
5.4 The Subspace $M_{\text{out}}(F)$	97
5.5 The Beurling-Lax Theorem, Revisited	98
5.6 Theorem. Canonical Factorization of Functions of Bounded Type	99
5.7 Theorem. Canonical Factorization of Functions of Class $N^+$	100
5.8 Uniqueness of Inner-Outer Factorizations	101
5.9 Outer Functions on the Disk	101
5.10 Outer Functions on the Half-Plane	104
Examples and Addenda	106
Notes	107

## Chapter 6. Factorization of Nonnegative Operator Valued Functions     109

6.1 Introduction	109
6.2 Toeplitz Operators and the Factorization of Nonnegative Operator Valued Functions	110
6.3 Pseudomeromorphic Functions	113
6.4 Analyticity Across the Boundary	115
6.5 Theorem. Factorization of Pseudomeromorphic Functions	117
6.6 Operator Fejér-Riesz Theorem	118
6.7 Theorem. Polynomials That Are Nonnegative on a Line	118
6.8 Rational Functions	119
6.9 Functions of Bounded Type; Mean Type	119
6.10 Entire Functions of Exponential Type	120
6.11 Operator Extension of Krein's Theorem	121
6.12 Krein Classes	123
6.13 Operator Extension of Ahiezer's Theorem	123

6.14 Theorem. Operator Extension of Szegő's Theorem	124
Examples and Addenda	125
Notes	126
Appendix. Topics in Function Theory     128	
1. Subharmonic Functions and the Class $sh^1(D)$	128
2. Theorem of Szegő-Solomentsev	132
3. Strongly Convex Functions and a Theorem of de la Vallée Poussin and Nagumo	135
4. A Theorem of Flett and Kuran	136
5. A Theorem of M. G. Krein	139
6. Miscellaneous Theorems from Half-Plane Function Theory	141
Bibliography	144
