PART I HOMOGENEOUS INTERPOLATION PROBLEMS WITH STANDARD DATA

1. Null Structure for Analytic Matrix Functions	7
1.1 Local null structure of analytic matrix function	7
1.2 Null chains and null pairs	14
1.3 Singular part and null subspace	24
1.4 Null triples	29
1.5 Null characteristics with respect to several zeros	35
2. Null Structure and Interpolation Problems for Matrix Polynomials	40
2.1 Local data	40
2.2 Linearization and monic matrix polynomials	42
2.3 Interpolation theorems: monic matrix polynomials with given null pairs	46
2.4 Interpolation of monic matrix polynomials with incomplete data	51
2.5 Non-monic matrix polynomials with given null pairs	55
2.6 Pairs and triples	60
2.7 Proof of Theorem 1.4.3	64
3. Local Data for Meromorphic Matrix Functions	65
3.1 Null functions and pole functions	65
3.2 Null and pole chains, null and pole pairs	70
3.3 Null and pole triples and singular pairs	74
3.4 Local characteristics relative to several points	80
3.5 Local data at infinity and Möbius transformations	83
4. Rational Matrix Functions	86
4.1 Realizations and minimality	86
4.2 Realizations and local data	94
4.3 A global interpolation problem for rational matrix functions	97
4.4 Null-pole coupling matrix	102
4.5 Interpolation with incomplete data: special case	106
4.6 Interpolation with incomplete data: general case	118
5. Rational Matrix Functions with Null and Pole Structure at Infinity	134
5.1 Realizations and Möbius transformations	134
5.2 Realizations of improper rational matrix functions	139
5.3 Null-pole triples at infinity and Möbius transformations	142
5.4 Interpolation with data at infinity	145
5.5 Specializations for matrix polynomials	148

5.6	Interpolation with prescribed null and pole data except at infinity	153
5.7	Minimal interpolation for matrix polynomials	160
6.	Rational Matrix Functions with J -Unitary Values on the Imaginary Line	162
6.1	Realization and interpolation problems with complete data	162
6.2	The associated Hermitian coupling matrix	167
6.3	J -unitary on the imaginary axis with given null-pole structure in the right half plane	170
6.4	J -unitary with poles on the imaginary axis	172
6.5	The case $J = I$	175
7.	Rational Matrix Functions with J -Unitary Values on the Unit Circle	178
7.1	Realization theorems and examples	178
7.2	The associated Hermitian coupling matrix	185
7.3	J -unitary on the unit circle with given null-pole structure in the unit disk	186
7.4	J -unitary with singularity at infinity	188
7.5	J -unitary with poles on the unit circle	194
7.6	The case $J = I$	197
Notes		199

PART II HOMOGENEOUS INTERPOLATION PROBLEMS WITH OTHER FORMS OF LOCAL DATA

8.	Interpolation Problems with Null and Pole Pairs	202
8.1	Rational matrix functions with given right null pairs and right pole pairs: necessary conditions	202
8.2	Rational matrix functions with given right and left pole and null pairs	206
9.	Interpolation Problems for Rational Matrix Functions Based on Divisibility	209
9.1	Statement of the problem and the main theorem	209
9.2	Proof of Theorem 9.1.1	211
9.3	A generalization	212
10.	Polynomial Interpolation Problems Based on Divisibility	213
10.1	Divisibility of matrix polynomials	213
10.2	Least common multiples	219
11.	Coprime Representations and an Interpolation Problem	224
11.1	Coprime matrix fractions	224
11.2	Local coprime matrix fractions	228
11.3	Rational matrix functions with given left numerator and right denominator	230
11.4	Rational matrix functions with given numerator and denominator from the opposite sides: local framework	234
Notes		235

PART III SUBSPACE INTERPOLATION PROBLEMS

12. Null-Pole Subspaces: Elementary Properties	237
12.1 Introduction and simple properties	237
12.2 Null-pole subspace for an admissible data set	239
12.3 Null-pole subspace from a null-pole triple	251
12.4 Local null-pole subspace in terms of Laurent coefficients	256
12.5 Local null-pole subspace in terms of null and pole chains	260
13. Null-Pole Subspaces for Matrix Functions with J -Unitary Values on the Imaginary Axis or Unit Circle	268
13.1 J -unitary versus unitary matrix functions	268
13.2 Negative squares and null-pole subspaces	273
14. Subspace Interpolation Problems	280
14.1 Interpolation of a given null-pole subspace	280
14.2 A rational indefinite metric Beurling-Lax theorem	285
14.3 A rational Ball-Helton invariant subspace representation theory	290
15. Subspace Interpolation with Data at Infinity	293
15.1 Null-pole subspace with data at infinity	293
15.2 Interpolation of a null-pole subspace with data at infinity	298
15.3 A rational Ball-Helton theorem: the general case	300
Notes	315

PART IV NONHOMOGENEOUS INTERPOLATION PROBLEMS

16. Interpolation Problems for Matrix Polynomials and Rational Matrix Functions	317
16.1 Tangential Lagrange-Sylvester interpolation	317
16.2 Lagrange-Sylvester interpolation in contour integral form	321
16.3 Lagrange-Sylvester interpolation in the divisor-remainder form	328
16.4 Solutions of the one-sided contour interpolation problem	329
16.5 Interpolation with several contour integral conditions	332
16.6 Interpolation of matrix polynomials with monic divisors and the Vandermonde matrix	337
16.7 Interpolation of matrix polynomials with regular divisors	343
16.8 Two-sided Lagrange-Sylvester interpolation: introduction and examples	345
16.9 The two sided contour integral interpolation problem in the divisor-remainder form	352
16.10 Existence and linear fractional description of solutions of two sided contour integral interpolation problem	357
16.11 The two sided contour integral interpolation problem with prescribed number of poles	368
17. Partial Realization as an Interpolation Problem	371
17.1 Statement of the problem and introduction	371
17.2 Description of minimal partial realizations	372
17.3 Examples	376
Notes	379

PART V NONHOMOGENEOUS INTERPOLATION PROBLEMS WITH METRIC CONSTRAINTS

18. Matrix Nevanlinna-Pick Interpolation and Generalizations	382
18.1 Classical Nevanlinna-Pick interpolation	382
18.2 Tangential Nevanlinna-Pick interpolation with simple multiplicities: introduction and main result	383
18.3 Tangential Nevanlinna-Pick interpolation with simple multiplicities: proofs	390
18.4 Generalized Nevanlinna-Pick interpolation: problem formulation	407
18.5 Solution of two-sided Nudelman problem	409
18.6 Proofs of Theorems 18.6.1 and 18.6.2	417
19. Matrix Nevanlinna-Pick-Takagi Interpolation	425
19.1 Takagi-Nudelman interpolation problem	425
19.2 Solution of the Takagi-Nudelman interpolation problem: main results	428
19.3 Proofs of the main results	430
20. Nehari Interpolation Problem	434
20.1 The Nehari problem and the Hankel operator: the unit disk case	434
20.2 The Nehari problem and the Hankel operator: the half-plane case	440
20.3 Solution of the Nehari problem	443
20.4 Proof of Theorem 20.3.2	446
20.5 The Nehari-Takagi problem	452
21. Boundary Nevanlinna-Pick Interpolation	457
21.1 Interpolation of angular derivatives: the scalar case	457
21.2 Tangential interpolation of matricial angular derivatives on the unit circle	463
21.3 Tangential interpolation of matricial angular derivatives on the imaginary line	473
21.4 Solution of generalized angular derivative interpolation problem	478
22. Caratheodory-Toeplitz Interpolation	487
22.1 The classical scalar case	487
22.2 Matrix Caratheodory-Toeplitz interpolation problems	490
22.3 Proofs of the main results	493
Notes	500

PART VI SOME APPLICATIONS TO CONTROL AND SYSTEMS THEORY

23. Sensitivity Minimization	506
23.1 Engineering motivation	506
23.2 Interpolation characterization of stable sensitivities: the simple case	512
23.3 Interpolation characterization of stable sensitivities: the general case	516
23.4 Solution to the sensitivity minimization problem	520
23.5 Sensitivity minimization with weights	522
24. Model Reduction	533
24.1 Introduction	533

CONTENTS

24.2	The Hankel norm	534
24.3	Optimal Hankel norm model reduction	537
24.4	Discrete time systems	540
25.	Robust Stabilizations	547
25.1	Introduction	547
25.2	Interpolation characterization of the Q -parameter	552
25.3	Solution of the robust stabilization problem	557
	Notes	560
	APPENDIX. Sylvester, Lyapunov and Stein Equations	562
	A.1 Sylvester equations	562
	A.2 Stein equations	569
	A.3 Lyapunov and symmetric Stein equations	575
	Notes	580
	REFERENCES	581
	NOTATIONS AND CONVENTIONS	595
	INDEX	601
