Preface ix

Basic notation 1

Introduction 5

CHAPTER 1. Preliminary Facts 13
§1. Measure theory 13
§2. Analytic functions 17
§3. Absolutely continuous and singular spectra 22
§4. Functions of a selfadjoint operator: the unitary group and resolvent 28
§5. Decomposition into a direct integral 31
§6. Classes of compact operators 35
§7. The trace and determinant 41
§8. The analytic Fredholm alternative 45
§9. The resolvent equation 49
§10. Conditions for selfadjointness 54
§11. Unitary operators. Perturbation theory 60

CHAPTER 2. Basic Concepts of Scattering Theory 67
§1. Wave operators (WO) 67
§2. Various modifications of the concept of WO (weak, local, Abelian WO, etc.) 73
§3. Completeness of WO 77
§4. The scattering operator and matrix. An elementary example 82
§5. Existence of WO. Cook's criterion 84
§6. Birman's invariance principle (IP) 86
§7. The stationary approach. Formulas for the WO 91
§8. Stationary representations for the scattering operator and matrix 94

CHAPTER 3. Further Properties of the WO 97
§1. Perturbation by the boundary conditon 97
§2. $\mathfrak{I}$-completeness 103
§3. Scattering for multiplicative perturbations 106

§4. Equations of second order in time 107
§5. IP for Abelian WO 109

CHAPTER 4. Scattering for Relatively Smooth Perturbations 113
§1. The Friedrichs-Faddeev model 114
§2. Scattering in the Friedrichs-Faddeev model 122
§3. Kato smoothness 128
§4. Sufficient conditions for smoothness 135
§5. The WO for smooth perturbations 138
§6. Smoothness with respect to the full Hamiltonian 143
§7. The absolutely continuous and point spectra of the operator H 146

CHAPTER 5. The General Scheme in Stationary Scattering Theory 153
§1. Weak smoothness 153
§2. Justification of the stationary method 157
§3. Connection with the time-dependent approach. IP 164
§4. Integral operators in direct decompositions 169
§5. The scattering matrix 174
§6. The decomposition theorem 178
§7. Scattering for relatively compact perturbations 181
§8. A local version of the stationary scheme 183

CHAPTER 6. Scattering for Perturbations of Trace Class Type 187
§1. Weak smoothness of Hilbert-Schmidt operators 187
§2. The Kato-Rosenblum theorem. "Negative" results 193
§3. Time-dependent proofs 196
§4. Local criteria for the existence of the WO 203
§5. Further generalizations 210
§6. An example. Perturbation by an integral operator of Fourier type 215
§7. One-dimensional perturbation 219
§8. Double Stieltjes operator integrals 225

CHAPTER 7. Properties of the Scattering Matrix (SM) 229
§1. The multiplication theorem for scattering operators and scattering matrices 229
§2. The invariance principle for SM. The SM in the unitary case 232
§3. Stationary representations for the WO and the scattering operator 236
§4. The SM for smooth perturbations 239
§5. Trace class integral operators 241
§6. The SM for trace class perturbations 246
§7. The structure of the stationary representation of the SM 250
§8. The spectrum of the SM for perturbations of definite sign 256
§9. The scattering cross section. Upper bounds 260

CHAPTER 8. The Spectral Shift Function (SSF) and the Trace Formula 265
§1. The perturbation determinant 265
§2. The SSF in the selfadjoint case. Trace class perturbation 271
§3. The trace formula of M. G. Kreĭn 276
§4. Connection with the scattering matrix. The Birman-Kreĭn formula 282
§5. The SSF in the unitary case 285
§6. Continuity of the SSF with respect to an operator parameter. Multivaluedness 292
§7. The SSF in the selfadjoint case. Resolvent comparable operators 297
§8. The SSF in the selfadjoint case. Refinement of results 303
§9. The SSF for semibounded operators 306
§10. The SSF for perturbations of definite sign 309
§11. Further information on the SSF 316

Review of the literature 325
