

# Table of Contents

<b>Preface</b> .....	ix
<b>Introduction</b>	
I. General remarks .....	1
II. Some notations .....	2
III. Orthogonal polynomials and continued fractions .....	3
IV. Bessel functions, Lommel polynomials, theta functions .....	5
V. Some analytic techniques .....	7
VI. Polynomials: reference information .....	9
<b>Chapter 1 Basic Data Structures</b>	
I. Basic data structures .....	14
II. Dynamic data structures .....	18
<b>Chapter 2 Data Structures and Orthogonal Polynomials</b>	
I. Dynamic data structures: Knuth's model .....	24
II. Mutual exclusion .....	49
III. Elements of duality theory .....	52
<b>Chapter 3 Applications of Bessel Functions and Lommel Polynomials</b>	
I. Analysis of the symbol table in Knuth's model .....	54
II. Analysis of some concurrent algorithms .....	65
<b>Chapter 4 Fourier Transform on Finite Groups and Related Transforms</b>	
I. Basic definitions and properties .....	76
II. Fourier transform on finite abelian groups .....	89
III. Krawtchouk polynomials and finite probability theory .....	91
IV. Appell states .....	99
V. Orthogonal polynomial expansions via Fourier transform .....	104
<b>Chapter 5 Young Tableaux and Combinatorial Enumeration in Parallel Processing</b>	
I. Representations of the symmetric group .....	112
II. Clustering distributions .....	122
III. Inversion of circulants .....	129
IV. Young tableaux and combinatorial enumeration in parallel processing .....	136
<b>References</b> .....	139
<b>Index</b> .....	145
